Supplementary Figure 1. Association of CAC Progression with Mean HbA1c during the study

1A. Participants with serious hypoglycemia (n=97)
1B. Participants without serious hypoglycemia (n=100)

Fit  95% Confidence Limits
Supplementary Figure 2. Progression of CAC by treatment group in people with serious hypoglycemia matched by baseline CAC

![Graph showing progression of CAC by treatment group](image)

- **Standard treatment group** (n=19)
- **Intensive treatment** (n=23)

Median extent of progression of CAC is shown. Error bars represent the 75th percentiles. Participants were matched within 10% of their baseline CAC scores. Number of participants: Standard treatment group=19; Intensive treatment =23.
