Segmental Meniscus Allograft Transplantation Technique
By Matthew T. Provencher, MD, CAPT (Ret)

Segmental meniscus transplantation serves as a robust repair option for restoring meniscal function and kinematics in patients with partial meniscal deficiency. Many of the meniscal deficiencies we encounter are only partial or segmental in nature; a segmental meniscal allograft addresses this pathology while maintaining knee kinematics, restoring biology, and maximizing preservation of native meniscal tissue.1-3 This is especially helpful for the common areas of meniscal deficiency, particularly the posterior horn, middle horn, or both.

Using meticulously designed cutting and measuring instruments, surgeons can identify and outline the extent of damage to the meniscus and precisely trim the allograft meniscal segment to be transplanted.

This technique also uses suturing devices, including all-inside and inside-out devices, that facilitate restoration of meniscal kinematics and help to stabilize the meniscal segment. Multiple size and measurement options and precise trimming options allow for excellent matching of the allograft segmental meniscus. In addition, size-matching is not necessary for smaller segmental defects (those measuring less than 1 cm up to 2.5 cm). Off-the-shelf meniscus allograft tissue may be used in these cases.

In summary, segmental meniscus transplantation provides an acceptable alternative for patients who have undergone meniscectomy and for whom function and circumferential mechanical aspects of a deficient meniscus are present. Ultimately, by restoring the tibiofemoral contact pressures in the knee, it may be possible to improve knee stability and prevent the onset of cartilage degeneration commonly observed following meniscectomy procedures.1,4
Measure the inner and outer lengths of the defect to account for the native curvature of the meniscus and defect. In addition, measure the depth of the defect at the anterior and posterior aspects.

Use the MegaBiter™ tool to create stable borders on the segmental defect; take care to maintain capsular rim.

Use a rasp to stimulate bleeding from the native capsular attachment.

Using an inside-out approach, use the ZoneNavigator™ device to approximate each quadrant of the defect.
Advance the needle with 2-0 TigerLink™ SutureTape through the nitinol loop. Repeat for the posterior inferior quadrant. Repeat using FiberLink™ SutureTape suture for the anterior superior and inferior quadrants.

Insert the 12 mm PassPort Button™ cannula with four-quadrant divider to aid in suture management.

Label the anterior and posterior horns of the allograft. Mark the measurements of the defect on the allograft, taking care to measure both the inner and outer lengths of the segment.
Cut allograft to desired length. **Technique pearl:** Cut allograft 1 mm shorter than the defect measures to ensure graft fit.

On the donor graft, use a cutting needle with attached nitinol loop to pass FiberLink™ and TigerLink™ SutureTape sutures that correspond to the SutureTape sutures that have been passed in the recipient site. Create a cinch configuration on each suture.

While maintaining good suture management, remove divider and PassPort Button™ cannula, then assemble and pass posterior links.
At this step, the posterior graft has been delivered. Assemble and pass the anterior links. Advance the segmental graft to the defect using the KingFisher® grasper while tensioning suture tails. To complete primary fixation, tie sutures over the capsule.

Optional: Complete fixation using FiberStitch™ implants as necessary along rim of meniscal segment.
Ordering Information

| Product Description       | JRF Ortho Part Number | LifeNet Health Part Number |
|---------------------------|-----------------------|----------------------------|
| Lateral Meniscus, right   | 28325001              | FMN RL                     |
| Lateral Meniscus, left    | 28325002              | FMN LL                     |
| Medial Meniscus, right    | 28225001              | FMN RM                     |
| Medial Meniscus, left     | 28225002              | FMN LM                     |
