Fatal gastrointestinal toxicity with ipilimumab after BRAF/MEK inhibitor combination in a melanoma patient achieving pathological complete response

SUPPLEMENTARY FIGURES

Supplementary Figure S1: Primary cutaneous lesion: depigmented lesion after one month on BRAF/MEKi.
Supplementary Figure S2: Melanoma bone metastases: immunohistochemical stains for HMB-45 A. and Melan A B.
Supplementary Figure S3: Gross specimen of subtotal colectomy with necrosis and hemorrhage.
Supplementary Figure S4: Autopsy: Peritoneal surface with extensive leucocytic infiltration A.; Lung parenchyma showing a prominent invasion by septated and ramified fungal hyphae consistent with Aspergillus B.
