Tumor cells can’t stand the heat
Boosting the effectiveness of hyperthermia in cervical carcinoma

Arlene Leonie Oei
The research described in this thesis was performed at the Center for Experimental Molecular Medicine (CEMM), Laboratory for Experimental Oncology and Radiobiology (LEXOR) and the Department of Radiation Oncology at the Academic Medical Center (AMC), University of Amsterdam (UvA), The Netherlands.

The research performed in this thesis was financially supported by the Dutch Cancer Society (KWF, Grant No. UVA 2012-5540).

Cover design and layout: Arlene L. Oei

About the cover: Women in red. This oil painting can be perceived either as two women facing each other (red gradient) in front of a red background, or as a cervix created by the red lines of the females’ bodies. The red gradient in this optical illusion represents hyperthermia.

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus
prof. dr. ir. K.I.J. Maex
ten overstaan van een door het College voor Promoties ingestelde commissie,
in het openbaar te verdedigen in de Aula der Universiteit
op vrijdag 24 maart 2017, te 11.00 uur

door

Arlene Leonie Oei

Geboren te Tilburg
Promotiecommissie

Promotores:
prof. dr. J.P. Medema Universiteit van Amsterdam
prof. dr. L.J.A. Stalpers Universiteit van Amsterdam

Copromotores:
dr. N.A.P. Franken Universiteit van Amsterdam
dr. H.P. Kok Academisch Medisch Centrum

Overige leden:
prof. dr. M.W. Dewhirst Duke University United States of America
prof. dr. M.R. Horsman Aarhus University Denmark
prof. dr. C.R.N. Rasch Universiteit van Amsterdam
prof. dr. C.J.F. van Noorden Universiteit van Amsterdam
dr. J. van der Velden Universiteit van Amsterdam

Faculteit der Geneeskunde
“A soloist can whistle a melody, but it takes an orchestra to play a symphony”

Science is what I do. Music is who I am.
Table of contents

Chapter 1 General Introduction: Treating cervical carcinoma 9
Outline of the thesis 20

PART I - Mechanisms of response to hyperthermia
Chapter 2 Effects of hyperthermia on DNA repair pathways: one treatment to inhibit them all 31
Chapter 3 Hyperthermia affects both BRCA2-proficient and BRCA2-deficient cell lines 69
Chapter 4 Hyperthermia selectively targets human papillomavirus in cervical carcinoma tumors via p53-dependent apoptosis 93

PART II - Schedule and time interval of hyperthermia and radiotherapy
Chapter 5 Radiosensitzation by hyperthermia: the effects of temperature, sequence and time interval 123
Chapter 6 A short time interval between radiotherapy and hyperthermia reduces in-field recurrence and mortality in women with advanced cervical carcinoma 143

PART III - Novel multimodality combinations with hyperthermia
Chapter 7 Synthetic lethality \textit{in vitro} and \textit{in vivo} of hyperthermia, chemotherapy and PARP1 inhibition in BRCA-proficient tumor types 163
Chapter 8 Sensitizing thermochemotherapy with a PARP1-inhibitor 181
Chapter 9 HSP90-inhibitor Ganetesbip potentiates radiosensitizating and chemosensitizing effects of hyperthermia 203

New directions, future outlook and conclusions
Chapter 10 Can hyperthermia target cancer stem cells? 233
Chapter 11 Summary and discussion of this thesis 263
Addendum Nederlandse samenvatting 279
Curriculum vitae 279
Portfolio proefschrift 279
Publication list 279
Acknowledgements 279
