ERRATUM

Violet Red Bile 2 Agar for Stressed Coliforms

PAULA HARTMAN, PHILIP S. HARTMAN, AND WAYNE W. LANZ

Department of Bacteriology, Iowa State University, Ames, Iowa 50010

Volume 29, no. 4, p. 537, 1st col. The second paragraph of Materials and Methods was inadvertently omitted during revision of the manuscript: “Two media were used for the VRB-2 procedure. Plates containing inocula were poured with a basal medium that contained all the ingredients of VRB agar (Difco Manual, Difco Laboratories, Detroit, Mich.), except bile salts and dyes. The sterile overlay consisted of VRB agar containing double the usual concentrations of bile salts no. 3, neutral red, and crystal violet. Thus, upon equilibrium in the petri dish, the composition of VRB-2 agar was identical to that of conventional VRB agar. Several other modifications of formulas, in which either the bile salts or dyes alone were omitted, were not as satisfactory as VRB-2 agar; the data are not presented here.”
