Cover: Posterior (left) and lateral (right) views of the squid *Doryteuthis pealeii* at hatching scanned using microCT. Segmented reconstructions of brain regions correspond to a fate map generated during early embryogenesis. Depicted are the pedal (purple), buccal (cyan), palliovisceral (green) and cerebral (pink) ganglia, the optic lobes (dark blue), the retina (red) and the lens/iris (yellow). See Research article by Koenig et al. on p. 3168.
