Here, we report the availability of draft genomes of several *Salmonella* serotypes, isolated from poultry sources from Nigeria. These genomes will help to further understand the biological diversity of *S. enterica* and will serve as references in microbial trace-back studies to improve food safety.

**Table 1**

| Serotype          | Source                          | Serotype          | Source                          |
|-------------------|---------------------------------|-------------------|---------------------------------|
| S. Enteritidis    | Poultry sources from Nigeria    | S. Enteritidis    | Poultry sources from Nigeria    |
| S. Enterica       | Poultry sources from Nigeria    | S. Enterica       | Poultry sources from Nigeria    |
| S. Typhimurium    | Poultry sources from Nigeria    | S. Typhimurium    | Poultry sources from Nigeria    |

**Note:** The serotypes reported in Table 1 were determined using serotyping methods described in the Methods section of the full paper. The sequences have been deposited in DDBJ/EMBL/GenBank under accession numbers listed in Table 1.
