Supplementary figure 2. Chemokine levels in response to FSL-1 in Ccr2-deficient mice. Peritoneal lavages from wild-type mice (B6) or Ccr2-deficient mice that had been injected i.p. with saline or FSL-1 (1 µg) 16 hours before sacrificing, were analyzed for the presence of several chemokines as indicated. The results shown are the means ± SEM, n=5-11 in 2 or 3 separate experiments. *, P < 0.05; **, P < 0.01; ***, P < 0.001 vs. saline treated control in each strain.
