Abstract

The foremost vital purpose of victimization of smartphones is for its applications which might be downloaded from the Play store. These mobile applications empower each capture fisheries and aquaculture. Using Mobile Application, Fishermen will ready to build the duty of fishing in a more pleasant way and, on the other side; a lot of profit may be taken from cultivation by diagnosing fish health diseases in time. Victimization of trendy technologies in fisheries and cultivation would be helpful to support higher cognitive process for coming up with and management of land use and alternative natural resources. The smartphone apps in Play store for fisheries and aquaculture created by Indian government organisations are mKRISHI ® Fisheries, Thoonidil, FFMA (A Fisher Friend Mobile Application), Fish Disease Advisory, CIBA Shrimp app, INDAQUA, Treat My Fish, mJhinga For Shrimp Aquaculture, CIF Lab Test, CIF Training, MathsyaKiran, Ornamental Fishes, Marine Fish Sales, SFDC App.

Introduction

Nowadays, mobile phones have become necessary for every person in their day today life. The usage of mobile applications has become essential in several fields. Smartphone apps were originally designed for productivity help like email, calendar, and phone databases, however, the general public demand for apps caused speedy enlargement into alternative areas such as mobile games, works automation, GPS and location-based services, order-tracking, and price ticket purchases. The demand of public leads to the creation of numerous apps in various fields. Applications are normally downloaded from application conveyance stages that are worked by the proprietor of the mobile OS just like the App Store (iOS) or Google Play Store¹,².

This paper explains about the use and importance of smartphone mobile applications in the field of fisheries and aquaculture. Aquaculture is the one of the leading revenue generating industry. Current fisheries production of India (2018 – 19) is 13.42 million metric tonnes³. Now the government is launched a scheme PMMSY
(Pradhan Mantri Matsya Sampada Yojana) for improving the fisheries and aquaculture sector for future. For this scheme, government has allotted Rs. 20,050crores. For achieving this, better awareness is needed among the farmers and fishermen’s. This digital platform will help in achieving the sustainable and profitable aquaculture and fisheries production.

Use of apps in fisheries and aquaculture

The fishing community is one of the most vulnerable groups, facing a number of challenges threatening their lives and livelihoods like unpredictable weather and ocean states, danger zones in the sea, lack of GPS information on the fish shoal, quality fish processing, value addition and storage, market trends and government schemes. Mobile phones reached great heights in markets because it provides information in real time. By using Mobile Application, ocean fishermen can do their work easily and safely as they get timely updates.

Smartphone apps launched by Indian government organizations

mKRISHI® Fisheries

It is a popular fisheries mobile app “mKRISHI®Fisheries” developed to provide information which help fishermen to decrease their operation cost. It is developed in collaboration with Tata Consultancy Services (TCS) Innovation Lab, Mumbai and INCOIS, Hyderabad and ICAR-CMFRI. This app makes fishing activities less expensive. It gives advisories in local languages. It is a result of multi-dimensional analysis. It also provides data about sea surface temperature and the presence of phytoplankton. It is helpful to identify the regions which are unsafe in the ocean by the fishermen using the previous data of wind speed and wind direction. So it is advisable for the fishermen to go to the ocean only when the information map is blue in color. Reduction in diesel consumption conjointly ends up in a less impure atmosphere. The other major challenge is lack of information signal accessibility in Deep Ocean. To increase the mobile signal up to thirty kilometers within the deep ocean, TCS and other partners made a pilot. This change the worth negotiation for the fishermen.

Thoondil

THOONDIL app is developed by Tamil Nadu Department of Fisheries jointly with National Centre for Coastal Research which provides real time data like weather forecast and potential fishing zone etc. It is a good support tool for saving numerable lives of fishermen. It is an android application launched to help fisherman community. This application compasses to fishing towns from Pulicat in Coromandal Coast to Neerody in West Coast. It has several vital options like a compass, weather, PFZ, daily journeys, my crew, my boats, live view, past trips, rescue set up, report incident and SOS. The live position of the boat can be found by its owner from the land by using live read feature in this app. In case of storm or cyclone, this app will be more useful to locate the boat and rescue the fishermen. This app reaches about 1076 Kmright along the whole Tamil Nadu.

FFMA (A Fisher Friend Mobile Application)

The app which was piloted by the MS Swaminathan Research Foundation (MSSRF) in partnership with Qualcomm and TCS in 2013. Everything, from Tsunamis to wave forecasts, is traced by INCOIS. MSSRF then uploads captured satellite pictures by INCOIS in this app successfully. All the information is delivered in 9 languages. It updates the data
like fishing shoals movement and also marks danger zones like Sunken ship wreckages once in every 24 hours And also it updates additional data like wave height, wind speed once in every 6 hours. The Fisher Friend Mobile Application provides inputs to the fisher folk such as Potential Fishing Zone and TUNA species-specific forecast, GPS facility and traditional fishing zones. It provides disaster alerts such as cyclone, tsunami.

Other uses like marking of danger zones in the sea such as sunken boat, rock substrate, dead coral reefs and market prices for various fish varieties, International Border Line (IBL) alert with state, SOS (Save our Soul) possibility for rescue once within the essential scenario in the ocean, tracking fishing route, career facility together with crucial contact details. Additionally, it provides ocean state forecast information such as wind speed and direction, sea surface temperature, wave height, etc., and also the updates of government schemes and daily news. Around ten thousand fishermen, families are getting benefitted by this app.

Fish disease advisory

Fish Disease Advisory is an education app developed by ICAR-CIFRI (Central Inland Fisheries Research Institute). It was released on October 22, 2018. It was launched to provide information about fish diseases in inland open waters such as fungal, bacterial, viral, parasitic, nutritional, genetic deformities and prawn diseases. It also provides the disease gallery for those above mentioned diseases. As disease cause a major impact on fish production, in both capture and culture system, it is better to use this application to gain some knowledge about the diseases like its type, pathogen responsible, illness outbreaks, etc., in the real-time. FDA is also useful for performing chemotherapy to battle against the disease.

CIBA shrimp

ICAR-Central Institute of Brackish water Aquaculture (CIBA), Chennai launched Vanami shrimp app. The farm management practices of *Penaeus vannamei* (Pacific white shrimp) is provided by this app for the shrimp farmers in a best way. Users can post their queries. The answers for the queries will be posted within two working days. CIBA Shrimp app provides technical support to the shrimp farmers. It can be downloaded at free of cost in Google Play store.

The updated version of this application contains risk assessment module, advisories, government regulations and disease diagnosis. It can also work without internet connection i.e., Offline.

INDAQUA

This app is developed by ICAR – Central Institute of Freshwater Aquaculture (CIFA), Bhubaneswar. It provides information indifferent local languages. It has many options like aqua directory, aqua expert, my farm, an aqua library, e-forum and recent updates. We can also use it as a portal in the web version. Information to the stakeholders in India can be provided with the help of this application.

Treat my fish

ICAR – Central Institute of Freshwater Aquaculture, Bhubaneswar launched a mobile application named “Treat My Fish”, which is available in three languages like English, Hindi and Oriya. It is a farmer-friendly ICT tool. It provides advisories for freshwater fish health issues. It is available in play store at free of cost. It contains information about parasitic, bacterial, fungal, viral and other diseases. This app can also be used for remote diagnosis.
mJhinga for aquaculture

To provide detailed advisory to farmers on setting up of new ponds, mJhinga mobile application was launched by ICAR-CIFE, Central Institute of Fisheries Education, Mumbai with a funding support from the National Agricultural Higher Education Project. It was mainly developed for shrimp aquaculture. It shows current market price trends. This bilingual dynamic application is useful for farmers to identify the problems by themselves. It also provides an option to ask the experts. There is a digital notebook to record and track daily inputs, expenses and water quality. This app is a great benefit for the farmers to empower inland saline aquaculture. In this, we can also find a helpline number for technical and government support.

CIFT lab test

ICAR – Central Institute Fisheries Technology, Kochi launched “CIFT Lab Test” app in 2019. It provides information about microbiological parameters and quality parameters of water and ice samples. Lab testing categories including analysis of various types of fish and fish products, packaging materials and other related parameters.

CIFT training

To provide full detailed information on ICAR-CIFT training programs, ICAR-Central Institute of Fisheries Technology, Cochin has developed this application which is very useful for the fisheries students and researchers. It can be accessed at any time and registration for these training programs can be done through online mode. Industry personnel and state extension personnel are profit by this app.

Mathsy Kiran

Mathsy Kiran is a potential app which provides fisheries-related data on culture and management practices as text and attractive image format. It is developed under a Masters Research program at ICAR-CIFE, Mumbai. It can be downloaded from the play store at free of cost.

It is very useful to fish farmers, students, extension personnel, policymakers. It can be accessed in offline mode also; thus it is user-friendly so anyone interested in fish farming can use this application easily.

Ornamental fishes

Ornamental fish rearing is a great hobby for everyone from old people to kids. It is majorly for aesthetic purposes. This app provides information for ornamental fish farming like lifespan, scientific name and temperature, etc.

It was developed by Tamil Nadu Dr J. Jayalalithaa Fisheries University. It conjointly provides knowledge regarding the actual tank size of various decorative fishes and tank region specifically for every species.

Marine fish scales

Marine Fish Sales app is developed to provide a platform to facilitate direct sales between fisher folk and the customers. It is a multi-vendor e-commerce app which was launched under the NICRA project of ICAR-CMFRI.

The vendors are coastal fisher folk groups from whom customers can get fresh fish directly. It includes Payment options like cash on Delivery, net Banking, debit/credit cards to make purchasing easy for all types of consumers.
Table 1: Mobile apps launched by Indian government organizations with its special features

| Sl.No | Name of the smartphone Application | Launched by (Indian Government Organizations) | Size in Megabytes (Mb) | Released date | Updated date | Latest Version | No. of downloads | Special features |
|-------|-----------------------------------|---------------------------------------------|------------------------|---------------|--------------|----------------|------------------|-----------------|
| 1.    | mKRISHI® Fisheries                | ICAR – CMFRI, TCS                          | 3.35                   | 8 Mar 2017    | 22 May 2020  | 2.9            | 5,000+          | Increase the catch; reduce the cost of operations, environment friendly. |
| 2.    | Thoondil                          | Department of fisheries, Tamil Nadu         | 4.44                   | 18 May 2019   | 15 Nov 2019  | 2.0            | 10,000+         | Information about weather forecast and PFZ; Cyclone alerts are close provided. |
| 3.    | FFMA                              | M.S Swaminathan Research Foundation (MSSRF) | 6.21                   | 27 Dec 2016   | 5 Jun 2020   | 4.63           | 10,000+         | PFZ, GPS facility; it also provides ocean state forecast information and also disaster alerts. |
| 4.    | Fish Disease Advisory             | ICAR - CIFRI                               | 5.23                   | 22 Oct 2018   | 22 Oct 2018  | 1.0            | 5,000+          | Fish diseases in inland open waters such as fungal, bacterial, viral, parasitic, nutritional, genetic deformities and prawn diseases. |
| 5.    | Vanami shrimp App                 | ICAR - CIBA                                | 25.03                  | 4 Apr 2017    | 8 Mar 2020   | 2.0.4          | 10,000+         | Input calculators, BMP module, disease diagnosis shrimp farm risk assessment module, update and advisories, government regulations for shrimp farm. |
| 6.    | INDAQUA                           | ICAR - CIFA                                | 12.30                  | 5 mar 2019    | 13 Nov 2019  | 2.7            | 1,000+          | Aqua directory, aqua expert, my farm, aqua library, e-forum and recent updates. |
| 7.    | Treat my Fish                     | ICAR - CIFA                                | 10.40                  | 4 Dec 2018    | 20 Sep 2019  | 7.0.1          | 1,000+          | Information about parasitic, bacterial, fungal, viral and other diseases. |
| 8.    | mJhinga for Shrimp Aquaculture    | ICAR - CIFE                                | 19.01                  | 28 Sep 2019   | 3 Dec 2019   | 0.0.2          | 500+            | Shows current market price trends. For setting up new ponds, it provides advisories to the farmers. |
| 9.    | CIFT Lab test                     | V. Chandrasekar ICAR – CIFT                 | 7.45                   | 6 Jun 2019    | 2 Dec 2019   | 3.0            | 100+            | Information about microbiological and quality parameters of water and ice samples, analysis of various types of fish and fish products, packaging materials. |
| 10.   | CIFT training                     | V. Chandrasekar ICAR – CIFT                 | 7.86                   | 7 June 2019   | 3 Dec 2019   | 1.0            | 100+            | Provides information on ICAR – CIFT Training programs. |
| 11.   | Mathsyakiran                      | KiranmayiDhenavakonda ICAR - CIFE           | 26.32                  | 11 Nov 2019   | 11 Nov 2019  | 1.0            | 100+            | Provides fisheries related data on culture and management practices as text and attractive image format. |
| 12.   | Ornamental Fishes                 | TNJFU                                      | 9.51                   | 3 Oct 2018    | 3 Oct 2018   | 2.0            | 1,000+         | Provides information like size, lifespan, breeding, scientific name, temperature and feeding. |
| 13.   | Marine fisheries                  | ICAR – CMFRI, Zacharia PU                   | 2.03                   | 1 Feb 2019    | 1 Feb 2019   | 1.0            | 100+            | To facilitate direct sales between fisher folk and the customers. |
| 14.   | SFDC App                          | Department of Fisheries, West Bengal        | 10.23                  | 27 Nov 2019   | 12 Jun 2020  | 1.0.18         | 50,000+         | Ecotourism, food court and online fish order. |

**SFDC app**

SFDC App is an online fish delivery app developed by the State Department of Fisheries, West Bengal (19). It has options like ecotourism, food court and online fish order. Eco tourism provides information about the list of hotels and types of rooms available. In the food court section, under food categories; lunch and dinner, snacks and starters are available. Dressed fish, dried fish, fillet fish items and ready to fry items can also be ordered through online fish order option.
Mobile applications with its combined features

Each smartphone application launched by Indian government organizations which are downloaded from the play store used in fisheries and aquaculture field has its own unique features and size. They are listed below:

In conclusion this modern world, usage of mobile application becomes mandatory in everyone’s life. In developing countries, smart phone usage has become very popular. For prevention and precaution, the mobile applications are highly useful for the fisherman. Mobile application helps the fishermen to know the seller and buyer. In Indian scenario, there are more mobile applications have been developed but they have not reached the stakeholders, fishing community and fish farmers, due to language issues. However, there are some apps provide multilingual choice which is very useful to them. Thus, in future, the smartphone apps with user-friendly mode and provide much information in their local languages need to be developed for the welfare of fisherman and aqua culturist.
