CONTENTS:

1. Figure S1. Diameter calculation of the PMP@MIL-88A systems.

2. Figure S2. N2 isotherms and pore size distributions of MIL-88A(Fe) with and without dopamine loading.
Fig. S1. Method used to calculate PMP@MIL-88A size: a) SEM image of PMP@MIL-88A aggregates; b) each particle was considered as sphere and then the equivalent diameter was calculated averaging several measurements.
Figure S2. $N_2$ sorption/desorption isotherms of unloaded (orange) and dopamine-loaded (blue) MIL-88A(Fe).
