Supplementary Material
Figure 1: Prescreening questionnaire provided to subjects prior to acceptance into the study. Questions 1 through 4 were taken directly from Kinsella2018AdaptationAdaptation, while questions 7 through 10 were adaptations of questions asked in the original questionnaire to allow subjects to provide more context if they have used VR or experience VR and/or motion sickness. Question 11 was taken directly from [?] with the purpose of determining if subjects are susceptible to sensory conflict or more generally, motion sickness. Subjects were excluded if they reported stomach problems, inner ear problems, medications which induce nausea, vertigo, vision problems other than glasses, or if they required glasses during the experiment and could not wear contacts. Subjects were also excluded if they responded as being "Very experienced" with VR (question 7), using VR "frequently" or more (question 8) of if they responded to questions 9 through 11 by indicating they never experience motion and VR sickness, and have never felt sick in any of the question 11 categories.
