Supplementary Table 3: Latency of Grade 3-5 toxicities after start of RT (safety population).

|                          | Group 1 (N=35) | Group 2 (N=47) | Total (N=82) |
|--------------------------|----------------|----------------|--------------|
| Grade ≥3 toxicities <3 months: | 16 (46%)       | 25 (53%)       | 41 (50%)     |
| Grade 3                  | 15             | 18             | 33           |
| Grade 4                  | 1              | 6              | 7            |
| Grade 5                  | 0              | 1              | 1            |
| Grade ≥3 toxicities at 3 to <12 months: | 11 (31%)       | 19 (40%)       | 30 (37%)     |
| Grade 3                  | 7              | 17             | 24           |
| Grade 4                  | 3              | 1              | 4            |
| Grade 5                  | 1              | 1              | 2            |
| Grade ≥3 toxicities at 12 months or after: | 13 (37%)       | 19 (40%)       | 32 (39%)     |
| Grade 3                  | 11             | 17             | 28           |
| Grade 4                  | 1              | 2              | 3            |
| Grade 5                  | 1              | 0              | 1            |
