Figure A: Bar graphs showing the capsid/kmp11 ratio for two species, *L. guyanensis* and *L. major*. The graphs compare various strains or conditions labeled as WT(1-4), 1-4, WT(2014), 2014, WT(2700), 2700, WT(LRV2), and LRV2.

Figure B: Western blots for *L. guyanensis* and *L. major* showing the expression of α-HA and α-tubulin at different molecular weights (kDa).
