**BOOK REVIEW**

**Justice and health care: Comparative perspectives.** Edited by A. Grubb and M.J. Mehlman, Wiley, Chichester, 1995. ISBN 0-471-95526-4, 350 pp, hardback, £35

This is one of a series from the Centre of Medical Law and Ethics at King’s College London and consists of essays written following two meetings held in 1993, one in London, the other in the USA. The majority of the material is based on the US health care experience but there are two contributions from the United Kingdom, one from Canada and one from Germany. With fundamental changes in organization of health care taking place in so many parts of the world, not least in the United Kingdom, and the increasing emphasis being placed on consumerism and ‘rights’ issues in the field of neonatal screening, this book is not as irrelevant to our interests as the title might at first sight suggest.
