IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the first World Computer Congress held in Paris the previous year. A federation for societies working in information processing, IFIP’s aim is two-fold: to support information processing in the countries of its members and to encourage technology transfer to developing nations. As its mission statement clearly states:

*IFIP is the global non-profit federation of societies of ICT professionals that aims at achieving a worldwide professional and socially responsible development and application of information and communication technologies.*

IFIP is a non-profit-making organization, run almost solely by 2500 volunteers. It operates through a number of technical committees and working groups, which organize events and publications. IFIP’s events range from large international open conferences to working conferences and local seminars.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is generally smaller and occasionally by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is also rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

IFIP distinguishes three types of institutional membership: Country Representative Members, Members at Large, and Associate Members. The type of organization that can apply for membership is a wide variety and includes national or international societies of individual computer scientists/ICT professionals, associations or federations of such societies, government institutions/government related organizations, national or international research institutes or consortia, universities, academies of sciences, companies, national or international associations or federations of companies.

Collaboration in a Data-Rich World

18th IFIP WG 5.5 Working Conference on Virtual Enterprises, PRO-VE 2017
Vicenza, Italy, September 18–20, 2017 Proceedings

Springer
Preface

Increasing availability of sensors and smart devices connected to the Internet, and powered by the pervasiveness of Cyber-Physical Systems and Internet of Things, create an exponential growth of available data. We observe the hyper-connectivity of organizations, people, and machines taking us to data-rich environments and often facing big data challenges. All activities in the world, and everyday life of people, leave trails that can be accumulated on cloud-supported storage, while developments in open data movement contribute to the wide availability of such data.

This emerging reality challenges the way collaborative networks and systems are designed and operate. Earlier approaches to collaborative networking however were constrained by scarcity of data, and thus previous solutions in terms of the organizational structures, applied algorithms and mechanisms, and governance principles and models, need to be revisited and redesigned to comply with the speed of evolving scenarios. Furthermore, new solutions need to consider a convergence of technologies, including CPS, IoT, Linked Data, Data Privacy, Federated Identity, Big Data, Data Mining, Sensing Technologies, etc., and the impact of the variables, such as time, location, and population, which suggest a stronger focus on system dynamics. The new abundance of data also raises challenges regarding data validity and quality, with the increasing need for data cleaning and avoiding the cascade of errors. Cyber-security and the impact of non-human data manipulators (bots) become particularly critical, as there is an increasing dependency on data from the society, which may lead to malicious data access and citizen safety and liberty concerns. On the other hand, there is a need to better understand the potential for value creation through collaborative approaches in this context.

PRO-VE 2017 is therefore addressing the timely topic of data-rich world. It will provide a forum for sharing experiences, discussing trends, identifying challenges, and introducing innovative solutions aimed at fulfilling the vision of collaboration in a data-rich world. Understanding, modeling and proposing solution approaches in this area require contributions from multiple and diverse areas, including computer science, industrial engineering, social sciences, organization science, and technologies, among others, which are well tuned to the interdisciplinary spirit of the PRO-VE Working Conferences.

PRO-VE 2017, held in Vicenza, Italy, was the 18th event in this series of successful conferences, including:

PRO-VE 1999 (Porto, Portugal), PRO-VE 2000 (Florianopolis, Brazil), PRO-VE 2002 (Sesimbra, Portugal), PRO-VE 2003 (Lugano, Switzerland), PRO-VE 2004 (Toulouse, France), PRO-VE 2005 (Valencia, Spain), PRO-VE 2006 (Helsinki, Finland), PRO-VE 2007 (Guimarães, Portugal), PRO-VE 2008 (Poznań, Poland), PRO-VE 2009 (Thessaloniki, Greece), PRO-VE 2010 (St. Étienne, France), PRO-VE 2011 (São Paulo, Brazil), PRO-VE 2012 (Bournemouth, UK), PRO-VE 2013
(Dresden, Germany), PRO-VE 2014 (Amsterdam, The Netherlands), PRO-VE 2015 (Albi, France), and PRO-VE 2016 (Porto, Portugal).

This proceedings book includes selected papers from the PRO-VE 2017 Conference. It provides a comprehensive overview of major challenges that are being addressed, and recent advances in various domains related to the collaborative networks and their applications. There is therefore a strong focus on the following areas related to the selected main theme for 2017 conference:

- Collaborative models, platforms and systems for data-rich worlds
- Manufacturing ecosystem and collaboration in Industry 4.0
- Big data analytics and intelligence
- Risk, performance, and uncertainty in collaborative data-rich systems
- Semantic data/service discovery, retrieval, and composition, in a collaborative data-rich world
- Trust and sustainability analysis in collaborative networks
- Value creation and social impact of collaboration in data-rich worlds
- Technology development platforms supporting collaborative systems
- Collective intelligence and collaboration in advanced/emerging applications:
  - Collaborative manufacturing and factories of the future, e-health and care, food and agribusiness, and crisis/disaster management.

We are thankful to all the authors, from academia, research, and industry, for their contributions. We hope this collection of papers represents a valuable tool for those interested in research advances and emerging applications in collaborative networks, as well as identifying future open challenges for research & development in this area. We very much appreciate the dedication, and time and effort spent by the members of the PRO-VE International Program Committee who supported the selection of articles for this conference, and provided valuable and constructive comments to help authors with improving the quality of their papers.

July 2017

Special Session Organizers

Special Session on Design Science Research in CNs
António Lucas Soares, Portugal
Eric Costa, Portugal
Kyrill Meyer, Germany

Special Session on Collaboration in Food and Agribusiness
Mareva Alemany, Spain
Angel Ortiz, Spain

Special Session on Knowledge Sharing for Production CPS
Dario Antonelli, Italy
Giulia Bruno, Italy

Special Session on Sustainability Improvements Through CNs
Laura Macchion, Italy
Carlo Brondi, Italy

Special Session on Big Data and CNs in Health
Andrea Zangiacomi, Italy
Marco Sacco, Italy
Marco Viviani, Italy
Special Session on Manufacturing Ecosystem Collaboration
Pericles Loucopoulos, UK
Yiannis Mourtos, Greece
Rosanna Fornasiero, Italy

Special Session on Risk and Uncertainty in Agriculture
Jorge Hernandez, UK
Janusz Kacprzyk, Poland
Hervé Panetto, France
Alejandro Fernandez, Argentina
Marco De Angelis, UK

**Contents**

**Collaboration in Industry 4.0**

Collaborative Networks as a Core Enabler of Industry 4.0 .................. 3
*Luis M. Camarinha-Matos, Rosanna Fornasiero, and Hamideh Afsarmanesh*

Digital Marketplaces for Industry 4.0: A Survey and Gap Analysis ........ 18
*Sonia Cisneros-Cabrera, Asia Ramzan, Pedro Sampaio, and Nikolay Mehandjiev*

Relevant Capabilities for Information Management to Achieve Industrie 4.0 Maturity .................................................. 28
*Volker Stich, Sebastian Schmitz, and Violett Zeller*

**Production Information Systems**

A Holistic Algorithm for Materials Requirement Planning in Collaborative Networks ................................................. 41
*Beatriz Andres, Raul Poler, and Raquel Sanchis*

BIM Based Value for Money Assessment in Public-Private Partnership ........ 51
*Guoqian Ren and Haijiang Li*

A Collaborative Unified Computing Platform for Building Information Modelling (BIM). .................................................. 63
*Steven Arthur, Haijiang Li, and Robert Lark*

**Production Networks**

A Proposal of Standardised Data Model for Cloud Manufacturing Collaborative Networks ......................................................... 77
*Beatriz Andres, Raquel Sanchis, Raul Poler, and Leila Saari*

The Implementation of Traceability in Fashion Networks ...................... 86
*Laura Macchion, Andrea Furlan, and Andrea Vinelli*

Digitization in the Oil and Gas Industry: Challenges and Opportunities for Supply Chain Partners ........................................... 97
*Arda Gezdur and Jyotirmoyee Bhattacharjya*
Manufacturing Ecosystem Collaboration

The AUTOWARE Framework and Requirements for the Cognitive Digital Automation

Elias Molina, Oscar Lazaro, Miguel Sepulcre, Javier Gozalvez, Andrea Passarella, Theofanis P. Raptis, Aleš Ude, Bojan Nemec, Martijn Rooker, Franziska Kirstein, and Eelke Mooij

An Approach for Cloud-Based Situational Analysis for Factories Providing Real-Time Reconfiguration Services

Sebastian Scholze, Kevin Nagorny, Rebecca Siafaka, and Karl Krone

A Proposal of Decentralised Architecture for Optimised Operations in Manufacturing Ecosystem Collaboration

Pavlos Eirinakis, Jorge Buenabad-Chavez, Rosanna Fornasiero, Haluk Gokmen, Julien-Etienne Mascolo, Ioannis Mourtos, Sven Spieckermann, Vasilis Tountopoulos, Frank Werner, and Robert Woitsch

Supporting Product-Service Development Through Customer Feedback

Tapani Ryynänen, Iris Karvonen, Heidi Korhonen, and Kim Jansson

Knowledge Sharing for Production CPS

New Requirement Analysis Approach for Cyber-Physical Systems in an Intralogistics Use Case

Günther Schuh, Anne Bernardy, Violett Zeller, and Volker Stich

Self-similar Computing Structures for CPSs: A Case Study on POTS Service Process

Dorota Stadnicka, Massimiliano Pirani, Andrea Bonci, R.M. Chandima Ratnayake, and Sauro Longhi

Ontology-Based Framework to Design a Collaborative Human-Robotic Workcell

Dario Antonelli and Giulia Bruno

Multi-agent Systems for Production Management in Collaborative Manufacturing

Teresa Taurino and Agostino Villa

Data-Rich Networked Organizations

Organizational Design and Collaborative Networked Organizations in a Data-Rich World: A Cybernetics Perspective

Paul Jackson and Andrea Cardoni
The Opportunities of Big Data Analytics in Supply Market Intelligence

Salla Paajanen, Katri Valkokari, and Anna Aminoff

Data Rich – But Information Poor.

Peter Bernus and Ovidiu Noran

**Big Data Analytics**

From Periphery to Core: A Temporal Analysis of GitHub Contributors’ Collaboration Network

Ikram El Asri, Noureddine Kerzazi, Lamia Benhiba, and Mohammed Janati

Big Valuable Data in Supply Chain: Deep Analysis of Current Trends and Coming Potential

Samia Chehbi-Gamoura and Ridha Derrouiche

Simplifying Big Data Analytics Systems with a Reference Architecture

Go Muan Sang, Lai Xu, and Paul de Vrieze

**Data Mining and Data Services**

Mining Governmental Collaboration Through Semantic Profiling of Open Data Catalogues and Publishers

Mohamed Adel Rezk, Adegboyega Ojo, and Islam A. Hassan

A Model-Based Environment for Data Services: Energy-Aware Behavioral Triggering Using ADOxx

Wilfrid Utz and Robert Woitsch

The Network Structure of Visited Locations According to Geotagged Social Media Photos

Christian Junker, Zaenal Akbar, and Marti Cuquet

**Data Acquisition and Analysis**

Customer Experience: A Design Approach and Supporting Platform

Maura Mengoni, Emanuele Frontoni, Luca Giraldi, Silvia Ceccacci, Roberto Pierdicca, and Marina Paolanti

Self-learning Production Control Using Algorithms of Artificial Intelligence

Ben Luetkehoff, Matthias Blum, and Moritz Schroeter

Business Modelling for Smart Continual Commissioning in ESCO Set-Ups

Karsten Menzel and Andriy Hryshchenko
Big Data and CNs in Health

How MyData is Transforming the Business Models for Health Insurance Companies .................................................. 323
