Figure S3. Simulated and observed plasma concentration-time profiles of (a) 200 mg QD itraconazole after the fourth dose, (b) ipatasertib after a single IV dose of 0.08 mg and (c) ipatasertib after a single oral dose of 200 mg.

(a) Itraconazole concentration (ng/ml) vs. time (hr)

(b) Ipatasertib concentration (pg/ml) vs. time (hr)

(c) Ipatasertib concentration (ng/ml) vs. time (hr)

Circles - observed individual plasma concentrations; dashed line - predicted mean plasma concentrations, 95th and 5th percentile.
