Editorial

List of the toxic plants, contains plants in which all of the plant or only certain parts of it are toxic. In general, poisoning occurs on the digestive system, but some plants, even by touch, may cause poisoning. Factors influencing the seriousness of intoxication are: Individual constitution, age, Characters inherited (hereditary inclination). At some plants, which contain a toxic labile, by boiling toxicity becomes inactive, it decomposes. Toxic plants in fairly high proportion negatively influence the quality. The species characterized from the viewpoint of chemical composition belong to classes such as the following.

Aconitum Species

Phytoconstituents

Aconitine, mesaconitine, lycocotnine and other alkaloids (2% in tubers). Aconitum roots contain catecholamine alkaloids, quaternary ammonium compounds, isoquinolines and different biocompounds.

Mesaconitine: R₁-CH₃; R₂-OH; C₃₃H₄₅NO₁₁; CAS: 2752-64-9
Hypaconitine: R₁-CH₃; R₂-H; C₃₃H₄₅NO₁₀; CAS: 6900-87-4

Jesaconitine: C₃₅H₄₉NO₁₂; CAS: 16298-90-1
Lappaconitine: C₃₂H₄₄N₂O₈; CAS: 32854-75-4

Toxicity

Main toxins, like aconitine, mesaconitine, jesaconitine and hypaconitine. The active principles are aconitine (a fast-acting toxin) and related alkaloids. Aconite extracts have been used homeopathically. Use is not recommended because of its toxicity. Aconitine and related alkaloids found in the Aconitum species are highly toxic, especially cardiotoxins or neurotoxins. The wild plant (roots or root tubers) is extremely toxic [1].

Actaea spicata

Phytoconstituents

Actaea spicata Linn. (Ranunculaceae) contains the benzylisoquinoline alkaloids (magnoflorine and corytuberine).
Magnoflorine: C_{20}H_{24}NO_{4}; CAS: 2141-09-5

Corytuberine: C_{19}H_{21}NO_{4}; CAS: 517-56-6

Toxicity

All parts, especially roots and berries, are toxic. As few as six berries have been reported to cause severe symptoms. Actaea species are closely related to plants in the genus Aconitum, a highly toxic plant genus which contains wolf bane and several varieties of monkshood. In some parts of Europe the powdered leaves, stems and flowers are used as an insecticide. Foliage and fruit are moderately toxic. Formerly protoanemonin was said to be found in fresh herb, but this couldn't be confirmed [2].

Adonis vernalis, Adonis volgensis, Adonis aestivalis

Phytoconstituents

Digitalis glycosides like adonidosid, adonivernosid, adonitoxine, cymarine, strophantidine, cardenolide glycosides; convallatoxin, glycosides-cymarine, adonitoxine; saponin phytosterine, adonite, adonitoxin and cardiac glycosides (cardenolides) similar to those of digitalis.

Strophantidine: C_{25}H_{34}O_{7}; CAS: 66-28-4

Cymarin: C_{30}H_{44}O_{9}; CAS: 508-77-0

Adonitoxine: C_{29}H_{42}O_{10}; CAS: 17651-61-5

Toxicity

This very toxic plant contains more than 10 cardiac glycosides. Its epigeous parts contain toxic cardiac glycosides; its roots are also poisonous, still being researched. Adonis first excites the inhibitory nerves in the heart at the central end, increasing arterial tension, and later paralyzes the peripheral end of the vagus. It also excites the accelerating nerves, so that there occurs an interference between the two systems of cardiac innervation, resulting in a feeble and irregular heart action and finally in a total paralysis of the motor nerve supply of the heart. It also causes diuresis. The action is rapid and not cumulative [3].

Aethusa cynapium

Phytoconstituents

Toxic concentrations of polynes also occur in Aethusa cynapium (fool's parsley) are also said to contain 'coniine-like volatile alkaloids'. Active ingredients: Online and cynopine, aethitsine, ethusanol; toxicity due to organic compounds polynes or polyacetylenes. Polyacetylens (aethusin, aethusanol A, B) and are known to contain several bioactive bisacetylenic alcohols.

Aethusin: C_{13}H_{14}, CAS: 463-34-3
Panaxacol: C_{16}H_{23}O_{2}, CAS: 106828-96-0

**Toxicity**

Aethusin, related to cicutoxin. Although fairly toxic, fool's parsley has occasionally been used in folk medicine. The herb is sedative and stomachic. It has been used in the treatment of gastro-intestinal problems, especially in children, and also to treat convulsions and summer diarrhoea. Extreme caution in the use of this herb is advised; see the notes above on toxicity. Excitement on ingestion, then depression, paralysis of skeletal muscles, vomiting, diarrhoea, pupils dilated, death by suffocation, does not affect the heart. The roots mistaken for radish, leaves for Parsley. *Aethusa* chiefly affects nervous system/gastrointestinal system. It is used to treat violent vomiting, pains, convulsions, and even delirium, which all lead to exhaustion and sleepiness. This remedy is also used to strengthen the mind when it is weak and when concentration is difficult [4].

**Agrostemma githago**

**Phytoconstituents**

The toxin is primarily sapogenin githagenin (may be 5-7% of the weight of seeds). Sapogenin githagenin (agrostemmasaponins) is contained in seeds and amounts to 5-7% of their weight. Agrostin (lectin) and triterpenic saponins: githagenin (7%); agrostemnic acid (diureidoacetate or diureidoacetate).

**Toxicity**

Githagenin is toxic (destroyed at 50°C). This plant contains colloidal glycosides which contain the properties of saponin. Saponin-containing plants have a bitter taste and are not often eaten, but there have been reports of poisoning in horses. 3 g of seeds are considered toxic. The seeds are primarily responsible for poisonings from corncockle, however, all parts are suspected to be toxic.

**Ailanthus altissima**

**Phytoconstituents**

The root bark and stem bark contain quassinoids: ailanthone, ailanthinone, chaparrin, glaucarubol, glaucarubin, glaucarubinone, shunjulactone, quassin, neosquassine, shunjulactones, ailantinols, quassinoid 1, shunjuglycosides 1α,11α-epoxy-2β,11β,12β,20-tetrahydroxypicrasa-3,13-(21)-dien-16-one,1α,11α-epoxy-2β,11β,12α, 20-tetrahydroxypicrasa-3,13-(21)-dien-16-one; alkaloids: canthin-6-one, 1-methoxycanthin-6-one, canthin-6-one-3N-oxide, 5-hydroxymethylcanthin-6-one, 1-(1,2-dihydroxyethyl)-4-methoxy-β-carboline, β-carboline-1-propionic acid, 1-carbamoyl-β-carboline, 1-carboxymethyl-β-carboline; coumarins: scopoletin, isofraxidin, altissimacoumarins A, B. The wood contains alkaloids: canthin-6-one, 1-methoxycanthin-6-one, canthin-6-one-3N-oxide.

**Upunaphenol A (Dipterocarpaceae): C_{56}H_{45}O_{13} (Resveratrol Oligomer)**
Scopoletin: C₁₀H₈O₄, CAS 92-61-5

Canthin-6-one: C₁₄H₈N₂O₂, CAS: 75969-83-4

Isofraxidin: C₁₁H₁₀O₅, CAS: 486-21-5

Ailanthone: C₂₀H₂₄O₇; CAS: 981-15-7

Chaparrin: C₂₀H₂₈O₇; CAS: 4616-50-6

Undecaprenol: C₅₅H₹₀O, CAS: 15575-14-1

Ailanthinone: C₁₃H₁₁NO₄; CAS: 423729-45-7

Quassine: C₂₂H₂₈O₆, CAS: 76-78-8

Seed contains quassinoids: shinjuglycosides A, B, C, D; sterols: ailanthosterols A and B. Leaf contains alkaloids: canthin-6-one, 1-methoxycanthin-6-one, 4-methoxy-1-vinyl-β-carboline, 1-methoxycarbonyl-β-carboline; flavonoids: apigenin, kaempferol, quercetin, isoquercetin, rutin, luteolin 7-O-β-(6''-galloyl glucopyranoside) or 12% tannin, quercetin, as well as isoquercetin, and alkaloid linuthine. Leaves/wood are high in cellulose and are used in paper-making. The crushed leaves and flowers are insect-repellent. The parts, when steeped in water, are said to yield an insecticidal solution. An aqueous extract of leaves contains a substance that is toxic to other tree seedlings.

Toxicity

Leaves are toxic to domestic animals. Gardeners who fell the tree may suffer rashes. Observations are more violent than my own to sniffing the leaves, “The odour of the foliage is intensely disagreeable and can cause headache and nausea rhinitis and conjunctivitis. The pollen can cause hay fever” The sap is a skin and eye irritant. Pollen can cause allergic reactions. A yellow dye is obtained from the leaves.
Male flowers are conspicuous and ill smelling, attracting many insects. Female flowers are less odorous and less conspicuous [6].

**Allium Species**

**Phytoconstituents**

The bulb contains sulfur compounds: alliin, cycloalliin, isoalliin, allicin, dipropenyl disulfide, methylpropenyl disulfide, dipropyl trisulfide, dimethyl thiophene, L-γ-glutamyl-S-(1E)-1-propenyl-L-cysteine, propanethiol, 3-mercapto-2-methylpentan-1-ol; S-propenyl-L-cysteine sulfoxide, anthocyanins: peonidin-3,5-diglucoside, cyaniding-3,5-diglucoside, cyaniding-3-glucoside; Se-"alliins": selenomethionine, selenocysteine, Se-methylselenocysteine; flavonoids: spiraeoside, quercetin, quercetin-3,4'-diglucoside, isorhamnetin-4'-glucoside, isorhamnetin-3,4'-diglucoside, kaempferol-4'-glucoside, quercetin-3,7,4'-triglucopyranoside, kaempferol-3-sophoroside-7-glucuronide, quercetin-3-sophoroside-7-glucuronide. The bulb also contains allicepin and protocatechuic acid.

**Selenomethionine**

\[
\text{C}_5\text{H}_{11}\text{NO}_2\text{Se}; \text{CAS: 1464-42-2}
\]

**Dipropenyl disulfide**

\[
\text{C}_6\text{H}_{10}\text{S}_2; \text{CAS: 2179-57-9.}
\]

**Protocatechuic acid**

\[
\text{C}_7\text{H}_6\text{O}_4; \text{CAS: 99-50-3}
\]
coumarins; sterols: ß-sitosterol; tannin; and volatile oil: carvone, camphor, caryophyllene, cineole.

**Skimmin:** $\text{C}_{15}\text{H}_{16}\text{O}_8$, CAS: 93-39-0

**Esculin:** $\text{C}_{15}\text{H}_{16}\text{O}_9$, CAS: 531-75-9

**Scopoletin:** $\text{C}_{10}\text{H}_8\text{O}_4$, CAS: 92-61-5

**Scopolin:** $\text{C}_{16}\text{H}_{18}\text{O}_9$, CAS: 531-44-2

**4,5-dihydroxy-3,6,7,8-tetramethoxyflavone,** $\text{C}_{19}\text{H}_{18}\text{O}_8$, CAS: 28914-17-2

**Isorhamnetin-3-O-glucoside:** $\text{C}_{23}\text{H}_{22}\text{O}_{12}$, CAS: 5041-82-7

**S-amyrin:** $\text{C}_{30}\text{H}_{50}\text{O}$, CAS: 559-70-6

**Damsin (ambrosin):** $\text{C}_{15}\text{H}_{20}\text{O}_3$, CAS: 1216-42-8

**Hymenin:** $\text{C}_{11}\text{H}_{11}\text{Br}_2\text{N}_5$, CAS: 105748-62-7

**Carpesiolin:** $\text{C}_{15}\text{H}_{20}\text{O}_4$, CAS: 2004-10-25

Toxicity

*Ambrosia* sp., both in their native range and in invaded areas, are of public health concern due to the allergenic properties of their pollen. The NDA panel concluded that inhalation of plant pollen causes rhinoconjunctivitis and asthma, with skin allergies and food allergy playing minor roles. *Ambrosia* may cross-sensitize patients to other allergens, including food allergens [8].

**Toxicity**

*Andromeda polifolia*

**Phytoconstituents**

Gardenoside, guaijaverine and avicularine, a new flavonol-dipentoside named polifolioside, neurotoxic diterpenoids: andromedotoxin and grayanotoxin.

---

**Andromeda polifolia**

**Phytoconstituents**

Gardenoside, guaijaverine and avicularine, a new flavonol-dipentoside named polifolioside, neurotoxic diterpenoids: andromedotoxin and grayanotoxin.
Anemone Species

Phytoconstituents

Ranunculin is converted enzymatically to protoanemonin. The rhizome contains triterpenoid saponins: raddeanins A, B, C, D, E, F, raddeanosides R\textsubscript{9a}, R\textsubscript{1}, R\textsubscript{2}, ..., R\textsubscript{18}, hederasaponin B, eleutheroside K, hederacholichiside F, leontoside D; triterpenoids: oleanolic acid, acetyloleanolic acid, betulin, betulic acid, lupeol; lactone: ranunculin. The aerial part also contains raddeanin A.

Oleanolic: C\textsubscript{30}H\textsubscript{48}O\textsubscript{3}, CAS: 508-02-1

Acetyloleanolic: C\textsubscript{32}H\textsubscript{50}O\textsubscript{4}, CAS: 4339-72-4

Betulin: C\textsubscript{30}H\textsubscript{50}O\textsubscript{2}, CAS: 473-98-3

Lupeol: C\textsubscript{32}H\textsubscript{52}O\textsubscript{2}, CAS: 1617-68-1

Protoanemonin: C\textsubscript{5}H\textsubscript{4}O\textsubscript{2}, CAS: 108-28-1

Raddeanin A: C\textsubscript{47}H\textsubscript{76}O\textsubscript{16}, CAS: 89412-79-3

Hederasaponin B: C\textsubscript{59}H\textsubscript{96}O\textsubscript{26}, CAS: 14216-03-6

Toxicity

The toxin (protoanemonin) is quite irritating to mucous membranes. Blisters are commonly seen after the plant is chewed. Ingestion is rare. If ingested, signs of severe, hemorrhagic gastroenteritis are seen and may lead to shock [10].

Chemical structure diversity and their biodiversity some the plants in overview of the extremely various. Plants are a rich source of bioactive phytochemicals or bio nutrients and on toxicity of active plant principles, which must be known, to determine their safety use.
Additionally many others, this list do not exhaust all toxic plants (Only some of species beginning with the letter A).
