Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.
Erratum

A Plasmid-Based Reverse Genetics System for Animal Double-Stranded RNA Viruses

In our recent Cell Host & Microbe publication, we overlooked references describing a plasmid-based reverse genetics system for infectious bursal disease virus (IBDV), a double-stranded RNA virus of avian species that contains two gene segments (family Birnaviridae). Previous publications by Boot et al. (1999) and Lim et al. (1999) describe recovery of viable IBDV from cells transfected with cloned cDNAs of viral genes. These papers should have been cited in Table S1: Plasmid-Based Reverse Genetics Systems for Representative RNA Viruses. We regret this oversight.
