EDITORIALS

Animal Cell Biotechnology

3613  In appreciation: Daniel I. C. Wang, 1936–2020

Systems Biotechnology

3614  Preface to the republication of the 2006 review article, “Professor Daniel I. C. Wang: A Legacy of Education, Innovation, Publication, and Leadership”
Charles L. Cooney and Noubar Afeyan

ARTICLES

3615  Professor Daniel I.C. Wang: A Legacy of Education, Innovation, Publication, and Leadership
Noubar B. Afeyan and Charles L. Cooney

Animal Cell Biotechnology

3628  Genome-wide analysis of single nucleotide variants allows for robust and accurate assessment of clonal derivation in cell lines used to produce biologics
Alexandre Kuhn, Valérie Le Fourn, Igor Fisch, and Nicolas Mermod

3639  Evaluation of the radiation response and regenerative effects of mesenchymal stem cell-conditioned medium in an intestinal organoid system
Young-Heon Kim, Sung-Hoon Han, Hyewon Kim, Sun-Joo Lee, Hyun-Woo Joo, Min-Jung Kim, Sehwan Shim, Kyuchang Kim, Janet Lee, Won-Suk Jang, Sunhoo Park, Hyosun Jang, and Seung Bum Lee

Biocatalysis, Protein Engineering and Nanobiotechnology

3651  Mining of UDP-glucosyltransferases in licorice for controllable glycosylation of pentacyclic triterpenoids
Liang Zhang, Shichao Ren, Xiaofei Liu, Xiaochen Liu, Fang Guo, Wentao Sun, Xudong Feng, and Chun Li

3664  Generation of highly selective monoclonal antibodies inhibiting a recalcitrant protease using decoy designs
Ki Baek Lee, Zachary S. Dunn, Tyler Lopez, Zahid Mustafa, and Xin Ge

3677  Activation and competition of lipoylation of H protein and its hydrolysis in a reaction cascade catalyzed by the multifunctional enzyme lipoate–protein ligase A
Xinyi Zhang, Jinglei Nie, Yuanmin Zheng, Jie Ren, and An-Ping Zeng
| Page | Title                                                                 | Authors                                                                                                                                       |
|------|----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| 3688 | Rational backbone redesign of a fructosyl peptide oxidase to widen   | Federica Rigoldi, Stefano Donini, Archimede Torretta, Anna Carbone, Alberto Redaelli, Tiziano Bandiera, Emilio Parisini, and Alfonso Gautieri |
|      | its active site access tunnel                                        |                                                                                                                                             |
| 3699 | Display of functional nucleic acid polymerase on *Escherichia coli*   | Mu-En Chung, Kati Goroncy, Alisa Kolesnikova, David Schönauer, and Ulrich Schwaneberg                                                        |
|      | surface and its application in directed polymerase evolution         |                                                                                                                                             |
|      |                                                                      | Biofuels and Environmental Biotechnology                                                                                                    |
| 3712 | Combined genomic and transcriptomic analysis of the dibutyl phthalate| Tengfei Liu, Jun Li, Lequan Qiu, Fuming Zhang, Robert J. Linhardt, and Weihong Zhong                                                           |

|      | bioreactor                                                          |                                                                                                                                             |
|      |                                                                      | Bioseparations and Downstream Processing                                                                                                    |
| 3757 | Online/at-line measurement, analysis and control of product          | Letha Chemmalil, Tanushree Prabhakar, June Kuang, Jay West, Zhijun Tan, Vivekh Ehamparanathan, Yuanli Song, Jianlin Xu, Julia Ding, and Zhengjian Li |
|      | titer and critical product quality attributes (CQAs) during process   |                                                                                                                                             |
|      | development                                                          |                                                                                                                                             |
| 3766 | Real-time monitoring of quality attributes by in-line Fourier         | Dhanuka P. Wasalanthanthri, Hasin Feroz, Neha Puri, Jessica Hung, Gregory Lane, Melissa Holstein, Letha Chemmalil, Douglas Both, Sanchayita Ghose, Julia Ding, and Zheng Jian Li |
|      | transform infrared spectroscopic sensors at ultrafiltration and      |                                                                                                                                             |
|      | diafiltration of bioprocess                                         |                                                                                                                                             |
| 3775 | Single-step purification of a small non-mAb biologic by              | Akshat Mullerpatan, Erin Kane, Ronit Ghosh, André Nascimento, Henrik Andersen, Steven Cramer, and Pankaj Karande                             |
|      | peptide-ELP-based affinity precipitation                            |                                                                                                                                             |
| 3785 | In vivo interpretation of model predicted inhibition in acrylate     | Sowmiya Balasubramanian, Priyadharshini Chandrasekran, Anitha J. R. Yesudhas, Padmapriya Ganapathryaman, Mark A. Eiteman, and Ramalingam Subramanian |
|      | pathway engineered *Lactococcus lactis*                             |                                                                                                                                             |
| 3799 | Metabolically engineered *Caldicellulosiruptor bescii* as a platform  | Christopher T. Straub, Ryan G. Bing, Jonathan K. Otten, Lisa M. Keller, Benjamin M. Zeldes, Michael W. W. Adams, and Robert M. Kelly        |
|      | for producing acetone and hydrogen from lignocellulose              |                                                                                                                                             |
Engineering Science of Biological Systems

3809  Heterogeneous diffusion in aerobic granular sludge
Lenno van den Berg, Catherine M. Kirkland, Joseph D. Seymour, Sarah L. Codd, Mark C. M. van Loosdrecht, and Merle K. de Kreuk

Synthetic Biology

3820  Display of lead-binding proteins on Escherichia coli surface for lead bioremediation
Xiaoqiang Jia, Ying Li, Tao Xu, and Kang Wu

3835  CRISPR interference of nucleotide biosynthesis improves production of a single-domain antibody in Escherichia coli
Jenny Landberg, Naia Risager Wright, Tune Wulff, Markus J. Herrgård, and Alex Toftgaard Nielsen

3849  Increasing cell-free gene expression yields from linear templates in Escherichia coli and Vibrio natriegens extracts by using DNA-binding proteins
Bo Zhu, Rui Gan, Maria D. Cabezas, Takaaki Kojima, Robert Nicol, Michael C. Jewett, and Hideo Nakano

Systems Biotechnology

3858  Microparticles globally reprogram Streptomyces albus toward accelerated morphogenesis, streamlined carbon core metabolism, and enhanced production of the antituberculosis polyketide pamamycin
Martin Kuhl, Lars Gläser, Yuriy Rebets, Christian Rückert, Namrata Sarkar, Thomas Hartsch, Jörn Kalinowski, Andriy Luzhetskyy, and Christoph Wittmann

3876  Kinetic modeling of microbial growth, enzyme activity, and gene deletions: An integrated model of β-glucosidase function in Cellvibrio japonicus
Jeanice Hwang, Archana Hari, Raymond Cheng, Jeffrey G. Gardner, and Daniel Lobo

Tissue Engineering and Delivery Systems

3891  Regulation of adipose tissue inflammation and systemic metabolism in murine obesity by polymer implants loaded with lentiviral vectors encoding human interleukin-4
Richard Youngblood, Carmen G. Flesher, Jennifer Delproposto, Nicki A. Baker, Christopher K. Neeley, Fanghua Li, Carey N. Lumeng, Lonnie D. Shea, and Robert W. O’Rourke

3902  In vivo evaluation of bioprinted prevascularized bone tissue
Patrick Rukavina, Fritz Koch, Maximilian Wehrle, Kevin Tröndle, G. Björn Stark, Peter Koltay, Stefan Zimmermann, Roland Zengerle, Florian Lampert, Sandra Strassburg, Günter Finkenzeller, and Filip Simunovic

3912  An in situ collagen-HA hydrogel system promotes survival and preserves the proangiogenic secretion of hiPSC-derived vascular smooth muscle cells
Biraja C. Dash, Kaiti Duan, Hao Xing, Themis R. Kyriakides, and Henry C. Hsia

3924  Alteration of gammaretroviral vector integration patterns by insertion of histone and leucine zipper into integrase
Yeji Yang, Ji-eun Lee, Hye-young Jeong, Ji-yeon Shim, Min-jeong Baek, Min-jeong Son, Yeon-ju Kim, Hohsuk Noh, and Kwang-il Lim
Animal Cell Biotechnology

3938 Anatomical templates for tissue (re)generation and beyond
Isabella Mavaro, Elena De Felice, Antonio Palladino, Livia D'Angelo, Paolo de Girolamo, and Chiara Attanasio

Biofuels and Environmental Biotechnology

3952 Molecular tools and applications of *Euglena gracilis*: From biorefineries to bioremediation
Bishal Khatiwada, Anwar Sunna, and Helena Nevalainen

Bioprocess Engineering and Supporting Technologies

3968 Production of entomopathogenic nematodes in submerged monoxenic culture: A review
Carlos Inocencio Cortés-Martínez and Norberto Chavarría-Hernández

3986 Toward in silico CMC: An industrial collaborative approach to model-based process development
David Roush, Dilip Asthagiri, Deenesh K. Babi, Steve Benner, Camille Bilodeau, Giorgio Carta, Philipp Ernst, Mark Fedesco, Sean Fitzgibbon, Matthew Flamm, Jan Griesbach, Tobias Grosskopf, Ernst B. Hansen, Tobias Hahn, Stephen Hunt, Francis Insaidoo, Abraham Lenhoff, Jasper Lin, Henrik Marke, Bruno Marques, Emmanouil Papadakis, Fabrice Schlegel, Arne Staby, Marcel Stenvang, Larry Sun, Peter M. Tessier, Robert Todd, Eric von Lieres, John Welsh, Richard Willson, Gang Wang, Thomas Wucherpfennig, and Oleksandr Zavalov

Synthetic Biology

4001 Cell-free protein synthesis enables one-pot cascade biotransformation in an aqueous-organic biphasic system
Wan-Qiu Liu, Changzhu Wu, Michael C. Jewett, and Jian Li

Corrigendum

4009 Corrigendum for “Increased Endothelial Cell Adhesion on Plasma Modified Nanostructured Polymeric and Metallic Surfaces for Vascular Stent Applications” [https://doi.org/10.1002/bit.22276]
Rajesh A. Pareta, Alexander B. Reising, Tiffany Miller, Dan Storey, and Thomas J. Webster
