Abstract. The research scope of safety culture development in urban community is urban community. The purpose of this study is to further improve the safety atmosphere of urban communities, reduce the safety risk of urban community, and ensure the harmonious and happy life of residents. This paper discusses the content and mode of the safety culture development in urban community, and puts forward the promotion mechanism of the safety culture development in urban community. This study is of great significance to enhance the ability of urban community security and risk prevention and control, enhance the sense of access, happiness and security of residents, and ensure the safety, harmony and sustainable development of the city.

1. Introduction
The safety culture development in urban community is an important part of urban public safety management. Because urban community is not only the basic unit of urban, but also the important cornerstone of improving the urban function and the level of urban safety management[1]. Urban community harmony is the foundation and guarantee of urban harmony. The safety management of urban community is related to the safety and development of the whole city. At present, China is in the transition period. The relationship between urban residents and their communities is increasingly close. The safety culture development in urban community is also an important part of adapting to the global economic integration and meet the social responsibility requirements of the government and enterprises for China[2-4]. It can not only improve the service level of urban communities, but also help to improve the social image of urban communities, which is carrying out safety culture promotion activities in urban communities, vigorously promoting safety culture and safety science and technology knowledge, and improving the safety awareness and prevention ability of all staff. At the same time, it is of great significance to optimize the city management, improve the safety management ability, and ensure the safety, harmony and sustainable development of the city[5-6].

2. Contents of safety culture development in urban communities
The content of safety culture development in urban community is shown in Figure 1, which mainly includes four parts: safety concept culture development, safety system culture development, safety environment culture development and safety behavior culture development.
2.1. Safety concept culture development

2.1.1. Safety education mode in community
The community management organizations organize the education and learning of policies, regulations and safety management knowledge for community residents by learning, discussion, report, broadcast, training and modern media and so on, which helps residents to enhance their concepts, expand their knowledge and improve their quality.

2.1.2. Safety publicity mode in community
The community management organizations publicize safety knowledge for community residents through the establishment of prohibition signs, warning signs, instruction signs, wall newspapers and other physical objects, as well as through wechat, microblog, QQ and other modern social media.

2.2. Safety system culture development

2.2.1. Safety management organization development in community
Safety system culture development needs to set up special organization and management organizations to take charge of the safety culture development in urban communities from both the government level and the community level, set up development teams and equip facilities according to the needs, and ensure the multi-body participation of the government, social organizations, enterprises, street offices, community neighborhood committees and community residents[7].

---

**Figure 1.** The content of safety culture development in urban community.
2.2.2. Safety system culture development in community
Safety system culture development needs to establish safety management mechanism in community, clarify the safety management responsibility system, safety fund guarantee system and safety supervision and inspection system. It needs to earnestly fulfill the management responsibility of safety culture development in community, ensure that the special funds are dedicated, and do a good job in supervision and inspection, so as to prevent the safety culture development from becoming a mere formality[8].

2.2.3. Safety normative documents development in community
Urban community safety culture legislation and related standards should be included in the important work agenda. The community should also formulate rules and regulations applicable to the safety culture development in its own community, so as to ensure that there are laws and regulations to follow in the safety culture development of urban community.

2.3. Safety environment culture development

2.3.1. Natural environment development in community
Natural environment development in community mainly includes greening environment development, clean and sanitary environment development, the control and treatment of pollution environment in community, so as to ensure that urban community residents have a good community natural environment.

2.3.2. Social environment development in community
Social environment development in community mainly includes living environment development based on the basic living facilities and comprehensive service facilities development in community, and public security environment development based on public security organization, facilities and equipments development in community.

2.3.3. Humanistic environment development in community
Humanistic environment development in community is mainly embodied in the humanistic facilities development in community, such as theater, cinema, concert hall, library, exhibition hall, art museum, cultural palace, club, stadium, bookstore, park, science and technology museum, activity center for senior cadres, activity center for the disabled, cultural station and others.

2.4. Safety behavior culture development

2.4.1. Safety management behavior development of organization and management department
Safety management behavior development of organization and management department mainly includes strengthening the implementation of relevant policies, laws, rules and regulations, strengthening the implementation ability of the government, departments and communities, improving the ability of government and community managers to solve problems, and standardizing safety management behaviors.

2.4.2. Residents' behavior development in community
Residents' behavior development in community mainly includes standardizing residents' production and living behaviors, fundamentally eliminating the phenomenon of illegal command, illegal operation and violation of labor discipline, so as not to hurt themselves, others and be harmed by others. At the same time, residents should strengthen their own inspection and supervision.
2.4.3. External safety supervision behavior development
Social organizations, enterprises, industry associations, intermediary organizations and other external safety relevant organizations are important forces to promote safety culture development in community. They can supervise community residents’ production and living behaviors, provide some reasonable development opinions, and actively promote and support the safety culture development in community.

3. Implementation guarantee of safety culture development in urban community

3.1. Establish and improve system and mechanism
Formulate the grass-roots mass autonomy system and personnel work system, and establish information exchange mechanism, interest coordination mechanism, appeal expression mechanism, conflict mediation mechanism, rights and interests protection mechanism, major public opinion report, guidance and prevention and control mechanism for the safety culture development in community. Formulate implementation plans, planning objectives, methods and measures to focus on the safety culture development of community in the whole process and all-round way[9].

3.2. Strengthen the participation of all personnel
The government, social organizations, enterprises, street offices, community neighborhood committees and community residents are required to participate to ensure safety for all members, the whole process and all aspects, and to coordinate governance and ensure the smooth development of safety culture development in community[10].

3.3. Organize and implement promotion projects of safety culture development
In order to promote the safety culture development and achieve the goal of accident prevention in community, community should organize and implement various promotion projects of safety culture development, covering traffic safety, fire safety, workplace safety, home safety, elderly safety, children safety, school safety, public place safety, social security, disaster prevention and mitigation and environmental safety, etc. It is suggested to set up "Demonstration community of safety culture development " and other similar demonstration communities to encourage and guide urban communities to declare actively.

3.4. Establish an inspection team for continuous improvement of safety culture development in community
Follow up the whole process of safety culture development in urban community, inspect, evaluate and supervise specially the promotion and implementation effect of various safety culture development plans in community, so as to continuously improve the overall level of safety culture development in community.

4. Conclusion
The safety culture development in urban community is a complex systematic project, and also a continuous and gradual process, which requires long-term persistence to integrate safety culture into the daily work and life of every resident in urban communities, and make it a way of life, work and habit of people. The research on safety culture development of urban community in China is still in the stage of exploration and development, and its development content, evaluation index and evaluation method need to be further improved. At the same time, it is necessary to speed up the research and establish the comprehensive and normative standards which are applicable to the safety culture development in urban community, so that there are standards and norms to follow for the safety culture development in urban community.
Acknowledgments

The work was supported by colleagues from Beijing Research Center of Urban Systems Engineering and teachers from College of Safety Engineering in North China Institute of Science and Technology. The authors are deeply grateful to these supports.
