A rare cause of abdominal pain and gastrointestinal bleeding: Colonic lipoma causing intussusception

Daniela Ferreira, Marta Salgado, Isabel Pedroto

ABSTRACT
Abstract is not required for Clinical Images
CASE REPORT

A 70-year-old male went to the emergency room with a 24-hour history of hematochezia preceded by pain in the right lower quadrant. The patient denied fever, weight loss, anorexia or vomiting. He was passing flatus and stools. His past medical history included ischemic heart disease, left renal neoplasia with nephrectomy two years previously and without evidence of recurrence, appendectomy in the childhood, right inguinal hernia repair, hyperuricemia, dyslipidemia, hypothyroidism treated with levotiroxine and colonic diverticula. On physical examination the patient was hemodynamically stable, afebrile and with pain on deep palpation of the right lower quadrant. Bright red blood was observed in the rectum. No other abnormal findings were noted. Blood tests demonstrated mild anemia (hemoglobin 11.2 g/dL) without leukocytosis or neutrophilia and elevation of C-reactive protein (88 mg/L). Renal and liver functions were normal. A colonoscopy was performed. Endoscopy revealed a violaceous mass with ulcerated/necrotic surface obstructing the lumen in the descending colon (Figure 1). After the colonoscopy the patient had an abdominal computed tomography scan that revealed a lipomatous ovoid tumor with 65 mm of major axis with origin in the ascending colon but with topographic change, because of a complication: colic-colic intussusception with the typical donut sign (Figure 2). The patient underwent surgery that confirmed a lesion with 65 mm and origin in the colonic margin of the ileocecal valve that caused the intussusception. A right hemicolecction was performed. The histopathology confirmed the diagnosis of giant lipoma with origin in the submucosa.

DISCUSSION

Colonic lipomas are common findings during routine colonoscopy. They are benign lesions usually located in the right colon with decreasing incidence from the cecum to the sigmoid colon. They usually arise from the submucosal layer, but can extend into the muscularis propria, while up to 10% are subserosal. Classically, endoscopic findings described for lipoma are three:
the mucosa being elevated over the lipoma with the biopsy forceps (tent sign), indentation of the lipoma with the biopsy forceps (cushion sign) or the “naked fat sign” where the fat can be extruded after biopsy. When typical endoscopic findings are present and they are asymptomatic lipomas do not need additional study or follow up. However, when the typical endoscopic findings are absent additional study with endoscopic ultrasound and/or surgical resection should be considered. Surgical resection should also be considered when they become symptomatic. Lipomas larger than 4 cm in size (giant lipomas) can become symptomatic in 75% of patients. They can manifest as abdominal pain, alteration in bowel habits, gastrointestinal bleeding, perforation, obstruction or intussusceptions.

Intussusceptions are an uncommon complication of colonic lipomas and usually limited to one segment of the colon but can extend to more than one segment in some cases [1, 2]. Patients with this complication can present with abdominal pain and gastrointestinal bleeding. Abdominal computed tomography scan is the preferred diagnostic method, as the imaging characteristics of the tumors are typical for adipose tissue with the typical donut sign. Colonoscopy can show a mass with necrotic areas and ulcerated mucosa. Due to the nature of this lesion (subepithelial) biopsies are often inconclusive. The distinction between a colonic lipoma complicated with intussusception from other lesions (malignant epithelial or subepithelial) may be impossible based only on endoscopic aspects. Surgical resection is the treatment of choice when giant lipomas are complicated by intussusceptions.

CONCLUSION

The key learning element in this case is recognition of a rare and serious complication (intussusception) of a common endoscopic finding (colonic lipoma). In this case, the typical clinical presentation, endoscopic and radiologic appearance to this complication is shown and the approach discussed.

Keywords: Abdominal pain, Colonic lipoma, Gastrointestinal bleeding, Intussusceptions

Edorium Journals: An introduction

Edorium Journals Team

About Edorium Journals
Edorium Journals is a publisher of high-quality, open access, international scholarly journals covering subjects in basic sciences and clinical specialties and subspecialties.

Invitation for article submission
We sincerely invite you to submit your valuable research for publication to Edorium Journals.

But why should you publish with Edorium Journals?
In less than 10 words - we give you what no one does.

Vision of being the best
We have the vision of making our journals the best and the most authoritative journals in their respective specialties. We are working towards this goal every day of every week of every month of every year.

Exceptional services
We care for you, your work and your time. Our efficient, personalized and courteous services are a testimony to this.

Editorial Review
All manuscripts submitted to Edorium Journals undergo pre-processing review, first editorial review, peer review, second editorial review and finally third editorial review.

Peer Review
All manuscripts submitted to Edorium Journals undergo anonymous, double-blind, external peer review.

Early View version
Early View version of your manuscript will be published in the journal within 72 hours of final acceptance.

Manuscript status
From submission to publication of your article you will get regular updates (minimum six times) about status of your manuscripts directly in your email.

Our Commitment

Six weeks
You will get first decision on your manuscript within six weeks (42 days) of submission. If we fail to honor this by even one day, we will publish your manuscript free of charge.

Four weeks
After we receive page proofs, your manuscript will be published in the journal within four weeks (31 days). If we fail to honor this by even one day, we will publish your manuscript free of charge and refund you the full article publication charges you paid for your manuscript.

Most Favored Author program
Join this program and publish any number of articles free of charge for one to five years.

Favored Author program
One email is all it takes to become our favored author. You will not only get fee waivers but also get information and insights about scholarly publishing.

Institutional Membership program
Join our Institutional Memberships program and help scholars from your institute make their research accessible to all and save thousands of dollars in fees make their research accessible to all.

Our presence
We have some of the best designed publication formats. Our websites are very user friendly and enable you to do your work very easily with no hassle.

Something more...
We request you to have a look at our website to know more about us and our services.

We welcome you to interact with us, share with us, join us and of course publish with us.
