Methods. A total of 679 skin and hair samples from animals (sheep n = 190, cows n = 79, goats n = 8, rams n = 4, and domestic cats n = 42), 200 sheep, 27 cows, 2,754 dogs, 216 horses, 2 (n = 2), and cats (n = 8) were subjected to direct microscopy and culture on Microcote agars.

Bacteraemia can be dangerous, especially in people with medical conditions such as diabetes or cancer. The signs of sepsis can include fever, chills, nausea, vomiting, and sometimes jaundice. People with sepsis need medical treatment right away, including antibiotics and sometimes surgery to remove infected tissues.
