Supporting information

Synthesis of manganese phosphate hybrid nanoflowers by collagen-templated biomineralization

Jean Claude Munyemana, Huixia He, Shenglong Ding, Jie Yin, Pinxian Xi, Jianxi Xiao

Figure S1. FT-IR spectra of the CL-Mn$_3$(PO$_4$)$_2$ hybrid nanomaterials prepared by incubating the mixture of 1.8 mM Mn(NO$_3$)$_2$ and 0.2 wt % of CL protein in 20 mM PBS buffer at 25 °C for 24 hrs.
Figure S2. Thermogravimetric analysis (TGA) curves of the CL-Mn$_3$(PO$_4$)$_2$ hybrid nanomaterials obtained by incubating the mixture of 1.8 mM Mn(NO$_3$)$_2$ and 0.2 wt % of CL protein in 20 mM PBS buffer at 25 °C for 24 hrs. The heating rate was 10 °C/min from 25 °C to 500 °C.
