Abstract: This article is conducted to describe and analyze the local government in handling the Covid-19 outbreak. The spread of the coronavirus (Covid-19) has caused various problems in Indonesia. In addition to health issues, Covid-19 has caused economic, social, cultural, security problems, even in the government field. The problem that arises in the field of government that is related to government administration, especially regarding the relations between the central government and regional governments in dealing with the situation of the spread of Covid-19 is associated with decentralized health affairs. The situation of the central government’s lack of responsiveness in responding to Covid-19 that has entered Indonesia, which is marked by the emergence of a lot of confusing news, both from the central government and regional governments, has led to various negative actions, chaos even distrust of the community. With these conditions, local governments have an important role in dealing with the Covid-19 outbreak. The raising question will be how are the policies of the regional government in handling this epidemic, but still in line with the instructions of the central government. Local governments and communities have a very vital role in minimizing and handling the spread of the Covid-19 outbreak compared to the central government. There are some shreds of evidence from regions with the red zones areas.

Keywords: covid-19 outbreak; local government role; society; policies.

Introduction
In late December 2019, an outbreak of baffling pneumonia portrayed by fever, dry cough, and fatigue, and infrequent gastrointestinal indications occurred in a seafood wholesale wet market, the Huanan Seafood Wholesale Market, in Wuhan, Hubei, China (Huang et al., 2020). The entire world is battling against the coronavirus pandemic. Confronting another infection, irresistible ailment specialists just as government authorities gear up to execute measures to control and relieve its damage (Wu, Chen, & Chan, 2019). This pandemic continues as there are no special vaccines and drugs yet. Some researchers predict, after the first
wave of transmission of the coronavirus has passed, there will still be further waves (WHO, 2020).

In the Covid-19 cases in Indonesia, since President Joko Widodo’s announcement on March 2, 2020, the positive patients with Covid-19 have increasing day by day (Malau, 2020). From a universal point of view, the numbers are still low, particularly comparative with Indonesia’s populace (Pierre, 2020). However, it is presently comprehended this is expected to under-testing. Indonesia has the most minimal pace of Covid-19 testing. Based on data from the (Wahyu, 2020) Indonesia has health facility limits for limiting the number of positive Covid-19 patients in Indonesia including for the Covid-19 rapid test. Besides, medical devices are only concentrated in Java, of the total hospitals, 936 units are in Java (51%), while outside Java only 891 units (49%). The number of ventilators in Java reached 4,942 units, while outside of Java only 892 units (Research and Development by Kompas, 2020). Thus, the genuine absolute number of cases is obscure, yet it is protected to expect that it is a lot higher than the official numbers show.

The Central Government of Indonesia has put together a task force to deal with the coronavirus, which is led directly by the Head of the National Disaster Management Agency (covid19.go.id, 2020). However, there is still resistance in society, mostly in terms of government openness regarding data related to the spread of the coronavirus in Indonesia. Indeed, this policy will have another impact, but let us reflect on how people do not panic, while people do not know the exact location of the spread of the coronavirus (Yahya, 2020). They are only able to guess and describe speculation. Providing a sense of security is a duty of the government. The diversity of national and international media coverage of the development of the coronavirus has become public consumption, which needs to be unclear to provide a representative and effective headline (Safitri, 2020). It is not uncommon for the public to wait for valid information from the government so that the public does not speculate, and worsening suspicion, government openness will create a sense of security, comfort and overcome community ignorance.

Since the Covid-19 outbreak began in early March, the government has tried to implement several of policies to reduce corona positive numbers in Indonesia including social distancing, calls for activities outside the home, conducting rapid tests of Covid-19 prioritized in red zone areas, large-scale social restrictions, until the ban on returning home (Heriani, 2020). There are many pros and cons to the policies taken by the central government. Some regions decide to take policies on their own such as lockdown their regions because of the perceived slow pace of the central government in making policies. Many are disappointed with the slow response of the central government to deal with the Covid-19 outbreak. This is shown by throwing resentment at social media. For example, the emergence of the hashtags #NegaraAbaikanRakyat which started trending at 12.00 WIB on April 1, 2020, then reached 78,000 tweets at 15.00 WIB (Pranita, 2020). The hashtag #NegaraSantuyRakyatAmbyar also
appeared as a form of satire against the government which was considered not to pay attention to its citizens who faced themselves with Covid-19. The hashtag #NegaraSantuyRakyatAmbyar started trending on April 1 at 13.00. Within an hour that is at 14.00 WIB reached 37,000 chirps (Pranita, 2020).

The government lacks responsiveness in responding to negative public narratives around closed information about the virus. Associated with intelligence there is indeed a type of information that can and cannot be consumed by the public. However, related to the urgency and efforts to minimize the affected community, presumably the government knows that providing comprehensive information on the location and progress of the case will make the community wiser and more cautious.

In addition to the results of a survey conducted by change.com (2020) assessing the government is less fast and less effective in handling the spread, reaching 42.8 percent. Then assessing the regional head was enough to handle Covid-19, reaching 36.1 percent. This certainly has made enough evidence that the regional government is more alert than the central government concerning the actual actions taken. It also means that the community was very hanging the expectations of Covid-19 completion on the local government level.

Therefore, with the limitation of the central government in suppressing positive numbers of Covid-19 in Indonesia, the role of local government is needed. They are considered to better understand the conditions and situation of the pandemic in their area and the difficulties faced by their people. Therefore, this study wants to analyze how the role of local governments and their communities in dealing with the Covid-19 outbreak in Indonesia.

Literature study with the role of local government on dealing with Covid-19 outbreak with a new state-society perspective is used in this research to explain definitions, keywords and terminology, besides the literature study conducted aims to distinguish things that have been done and determine things that need to be done. This matter can be interpreted that the study literature can prevent us from happening duplication of research or work in the past that has been done by people other. However, past research can be material or at least whether or not to provide ideas or inspiration for research to be done at this time, especially as a direction for us to do current research. The last is to do synthesis and gain a new perspective.

Data collection techniques are carried out by looking for theoretical references that are relevant to the case or problem found. Reference theory and documents relating to the topic obtained through research literature studies serve as the basic foundation and main tool for research practice in the middle of the field in this study. This research was conducted with the object of the several local governments in facing the Covid-19 outbreak as well as its community. Data search was conducted from March to May 2020.

**Policy Perspectives: Policy Network**

Policy Network tries to promote strategic thinking on progressive solutions to the 21st century and the eventual fate of social majority rule government
(Mazzucato, 2012). It composes discussions and behaviors to inquire about the arrangement and political difficulties (Jenkins-Smith et al., 2018). Whirling around all approach choices and their execution is policy networks (Marsh and Rhodes 1992; Jenkins-Smith et al. 2018), by and large characterized as elements trying to impact approach, their connections, and related results. Arrangement systems incorporate ideological groups, open offices, chose workplaces, intrigue gatherings, non-government associations, the scholarly community, think tanks, and some more (Dörry & Decoville, 2016; Jordana et al., 2012; Harris et al., 2017; Parsons, 2018). These elements identify with one another through an assortment of ties significant in policymaking, for example, data and asset trades, coordinated effort, trust, and partner/adversary relations (Peters et al., 2017; Lubien ski, 2018; Fawcett & Daugbjerg, 2012). Policy networks respond and add to the moving of consideration regarding strategy issues and changing of government plans. The COVID-19 pandemic implies an abrupt and intense move in what issues arrangement systems focus on and, thusly, changes in the motivation of numerous administration dynamic settings, for example, councils and parliaments. Prior policy networks condition strategy and cultural reactions. Many of the reactions saw in COVID-19 mirror the vulnerabilities and qualities of earlier approach systems, just as emanant connections (Bodin et al. 2019).

Changes in the significance of approach systems' kin and associations, relations, and resources once settled, policy networks have been demonstrated to be moderately steady (in any event in hierarchical portrayal), with regularized examples of connections (Jenkins-Smith et al. 2018). A portion of these arrangement systems has been modified in the wake of the COVID-19 reaction. This incorporates making a few relations pointless and others fundamental, raising the centrality of certain substances, (for example, open specialists and specialists), and pushing different elements to the fringe, (for example, ideological groups and affiliations). For instance, in federalist nations, tending to the COVID-19 pandemic anxieties the interchange among national and subnational specialists. In the USA, this is clear with New York Governor Cuomo’s political ascent in his continuous tussles with President Trump over the gravity of New York’s circumstance and the job (or deficiency in that department) of the central government in supporting the state’s alleviation endeavors (Enton, 2020). In Switzerland, a few cantons have bypassed focal choices by taking stricter measures than those presented by the national government.

Policy Success and Failure
The policy is frequently used to comprehend strategy assessment in progressively ordinary rhythms of approach cycles, solid proof bases, and evaluative methods. Be that as it may, COVID-19 has impelled it out of these ordinary rhythms by forcing extraordinary criticalness, vagueness, and worth clashes. Bits of knowledge from the writing on strategy achievement and disappointment with its augmentation to the emergency the executive space (McConnell, 2011) give a valuable
on beginning stage to evaluating approach making under such extraordinary conditions.

Who is influenced and to what degree impact casings of accomplishment or disappointment Policy choices are probably going to profit a few populaces and harm others. The success or failure is decided as a component of choices, procedures, and legislative issues. Crisis choices center on open strategy and can be assessed dependent on containing dangers, limiting harm, and reestablishing request and steadiness. Emergency procedures can be assessed against the models for adherence to forms pertinent to settling the current emergency (from initiating plans to all around decided act of spontaneity), to following a procedure that is authentic, through after protected shows or earning authenticity from key partners. Emergency legislative issues center around progress from the point of view of governments and can be evaluated against reputational security, upgrade, and well-known help; capacity to oversee approach and political motivation with as meager reverse discharge as could reasonably be expected; and ability to keep up long haul administration/ideological dreams.

Focal points and accounts shape the impression of success and failure. It will consistently see success and failure through focal points of qualities and different directions (Lasswell, 1970). On the off chance that feel the superseding need for giving a money-related guide to the jobless and low-pursued, at that point we are probably not going to see bailouts for carriers as progress. Adjusting Boven’s and ’t Hart (1998) helpful way to deal with COVID-19 is the evaluation of the degree of success or failure, its causes (from fumble to certainty) and suggestions for future emergency choices (from refining existing headings to the requirement for a sensational change). This can be applied to the "entire of government" reaction or basically to one part of the reactions. Various accounts and varieties are conceivable, yet layout three speculative representations (Weible et al, 2020):

First is the success direction e.g., a decrease in the quantity of day-by-day cases is the result of the early forbidding of universal departures from China. Our victories were and will keep on being the consequence of pre-emptive activity.

Second is the failure direction e.g., the present exponential ascent in affirmed cases is the result of careless political administration, progressively keen on quieting fears for the following political decision than intending to genuine dangers. New reasoning is expected to turn away progressively superfluous tests.

The third is the mixed direction e.g., the government has prevailed with regards to hindering the pace of new contaminations yet emergency clinics despite everything can’t adapt. People can’t stand to be self-satisfied and should channel extra assets into cutting-edge social insurance.

The Concept of State-Society

State society is characterized by Marc, et al (2013) as 'associations between state organizations and cultural gatherings to haggle how open authority is practiced and how it very well may be affected by individuals. They are centered on issues, for example, characterizing the shared rights and commitments of state and society, haggling how open assets
ought to be apportioned and building up various methods of portrayal and responsibility’ (Marc, 2013; Gillman, 2018; Varda, 2011; Qiaoan, R. (2020). The attention is not on specific institutional structures yet rather on the relations and social elements of state and society foundations. Neither the state nor common society is viewed as acting in seclusion (Mitchell, 1991; Lin, 2021; Joseph, 2020; Chu, 2018). Or maybe, the state determines its authenticity through its collaboration with residents and a composed and dynamic common society.

The Citizenship Development Research Center (2020) perspectives a resident as 'somebody with rights, goals and obligations to others in the network and the state. This infers a relationship among residents, and between the state and every one of those living inside its outskirts' (Benequista, 2010; Botelho, 2014; Naik, 2020; Wolford, 2016). Citizenship presents different advantages, including the option to appreciate a nationality; to cast a ballot, hold office and take an interest in political procedures; to get to instruction, wellbeing and different merchandise; to get to the work advertise past the casual area; to claim organizations, land and different types of property; and to the security of habitation and opportunity of development.

The idea of political settlement can enormously affect state-society relations (Crow, 2018). In numerous delicate and struggle-influenced states, relations depend on the support and the absence of responsibility. The unmistakable quality of casual organizations and connections and informal procedures bring about divergences between formal frameworks and rules and real practice (Pouiligy, B., 2010). Political elites, who profit by supporting and pay from characteristic asset rents and crimes, regularly have minimal impetus to connect with residents and to fabricate compelling open position (Rowland, N., and Smith, C., 2014). The convergence of intensity in a couple of elites additionally constrains the cooperation of residents from open life. In certain circumstances, residents might be avoided from open life through state restraint and brutality. These outcomes in a heritage of negative and feeble state-society relations. Endeavors to advance a comprehensive political settlement can re-shape relations and add to political and social change.

A significant part of the spotlight in the state has been on building the limit of focal state organizations (Marc, 2013). Consideration should likewise be paid to supporting common society and resident commitment to such an extent that they can consider the state responsible and make it receptive to society (Seller, 2010). Where contributor arrangement and subsidizing have been aimed at both state and common society foundations, these mediations have frequently been compartmentalized dependent on a customary state-common society partition (Negoita, 2019). Procedures and strategies are required that attention on the collaboration among establishments and residents at all phases of war-to-harmony progress, from harmony dealings and usage of understandings to post-strife peacbuilding (Benequista, 2010; Habermas, 2015). The challenge is to build peace coalitions that stretch on a level horizontally and vertically between various degrees of society.
More prominent consideration additionally should be paid to inquiries of intensity and to modifying world class motivating forces (Marc, 2013). Outside entertainers will think that it is troublesome, however, to legitimately impact inner political elements. It might in this way be progressively successful to target worldwide conduct and activities that influence motivators (Kerkvliet, 2018), for example, the executives of extractive businesses, global tax avoidance and debasement. State building approaches additionally need to go past demonstrating the connection between state, elites and a disaggregated 'society' (Robson, 2018), and ask who is spoken to by each gathering, who takes an interest in state-society exchanges, and whose requests are being communicated? For instance, giver ways to deal with state building regularly have not locked in with existing information about sexual orientation power relations and how state-building forms unexpectedly sway ladies and men (Negoita, 2019).

Methods

Following the problem that the author will examine in this study which is the role of local government on Covid-19 outbreak in Indonesia with a new state-society perspective, the method used is using literature studies. According to (Haryanto, 2008) a literature study is collecting information and data with the help of various kinds of material in the library and media both print and electronic such as books, documents, notes, journals, problems, and so forth. Reinforced by Abdullah (2015) said that the literature study is to study various references and the results of previous similar studies that are useful to get the theoretical basis on the problem to be examined.

Result and Discussion

The Policies of Local Government to Cope with Covid-19 Outbreak in Indonesia

At present, Covid-19's handling status is based on Decree of the Head of the National Disaster Management Agency Number 9A of 2020 concerning Determination of the Status of Specific Disasters of the coronavirus Disease in Indonesia (BNPB, 2020). The decree was just renewed by Decree of the Head of the National Disaster Management Agency No. 13A of 2020, which extended the status of the disaster to May 29, 2020. Also, the Indonesian government through Presidential Decree No. 7 of 2020 formed a task force to accelerate the handling of Covid-19 in Indonesia. In the case the command handling of the Covid-19 outbreak was at the national level which is the Central Government because through Presidential Decree No. 12 of 2020 the status of the Covid-19 outbreak on April 13, 2020 became a National Scale Disaster (BNPB, 2020).

Efforts made by the Jokowi’s Government for handling the Covid-19 outbreak are calls for social restrictions, appeals not to leave the house, schooling is done online, banning going home to the village, increasing personal protective equipment for doctors, conducting rapid tests for patients indicated Covid-19, to the large-scale social restrictions that are currently being implemented (Pandia & Harto, 2020). The strategies carried out by the government will not succeed if they are not supported by the regional government.
and its people. As mention by Boven's and Hart (1998) that useful approach for Covid-19 is the assessment of the extent of success or failure it is causes and implications for future crisis decisions. The role of local government is very important and central in dealing with Covid-19 outbreak in Indonesia because the regions understand well about the condition of their territory (Rahma, 2020).

The local government becomes an important role because the policy from the center is lowered and must be translated as well as possible for each region which incidentally has different cultural and customary conditions. Since Indonesia has 34 provinces and around 17,000 islands, it certainly cannot be generalized. The success or failure to suppress the positive patient numbers of Covid-19 is determined by the local government which can translate and even innovates the Central Government's rules. In this discussion some of the local governments taken for the case study are some of the red zones, namely DKI Jakarta, North Sumatra, South Sumatra, East Java, West Java, Central Java, Yogyakarta, South Sulawesi, and West Papua. As we can see in the table below:

As Covid-19 appears, pandemics are complex social and behavioral challenges and not fair technocratic issues. Government staff and citizens are grappling with the danger of contracting the contamination or managing with individual misfortune. Compelling coordination instruments between national and local governments are basic. We have to be reinforced nearby frameworks and construct the capacity of nearby authorities to oversee the arrangement reaction (from wellbeing to the economy to social security). Investment in local government will be key to successful recovery and long-term resilience.

Table 1.
Local Government Policies Action in Dealing with Covid-19

| Region         | Mitigation | Social Distancing | Budget Refocusing and reallocation | Rapid Test | LSSR/PSBB | Providing website |
|----------------|------------|-------------------|-----------------------------------|------------|-----------|-------------------|
| DKI Jakarta    | ✓          | ✓                 | ✓                                 | ✓          | ✓         | ✓                 |
| North Sumatra  | ✓          | ✓                 | -                                 | -          | -         | ✓                 |
| South Sumatera | -          | ✓                 | -                                 | ✓          | -         | -                 |
| West Java      | ✓          | ✓                 | ✓                                 | ✓          | ✓         | ✓                 |
| East Java      | ✓          | -                 | ✓                                 | ✓          | -         | ✓                 |
| Central Java   | ✓          | ✓                 | ✓                                 | ✓          | ✓         | ✓                 |
| Yogyakarta     | ✓          | ✓                 | ✓                                 | ✓          | -         | ✓                 |
| South Sulawesi | -          | ✓                 | -                                 | -          | -         | ✓                 |
| West Papua     | -          | ✓                 | -                                 | -          | -         | -                 |

Source: Author
Jakarta has become one of the regional governments that have fast policies in responding to the Covid-19 outbreak. Although according to data from the Covid-19 task force nationally Jakarta is still the highest for Covid-19 positive patients at 47% (BNPB, 2020). The policy of the regional head in Jakarta is calculated to be the fastest compared to other regions even the central government in responding to the pandemic. Data from various Indonesian media states that there have been at least three policies taken by the Jakarta regional government since it was announced that there were 2 people affected by the Covid-19 outbreak in Indonesia including limiting public transport to maintain social or physical distancing, then limiting inter-city transportation, quarantine for a while (Rahma, 2020). Besides, to provide real-time data updates to the people of Jakarta, they have a Covid-19 website portal through corona.jakarta.go.id. Therefore, people can access and search for information related to the Covid-19 outbreak in Jakarta easily.

North Sumatera, The North Sumatra government is preparing three steps to deal with the Covid-19 virus outbreak. The first concept being carried out by the North Sumatra Government is preparing physical treatment, which is by setting up hospitals and completing all the medical equipment needed to treat patients exposed to Covid-19 to recover. The second step, taking care of non-physical by preparing social impacts due to the coronavirus pandemic. Third, the handling of this non-physical concept by refocusing and reallocating the budget. Therefore, the Government of North Sumatra has prepared a non-physical handling budget that has been approved by the Regional Representatives Council of North Sumatra with a value of 1.5 trillion. Also, to provide updates to the people of North Sumatera, they have a Covid-19 website portal through http://covid19.sumutprov.go.id.

South Sumatera, the preparedness of the anticipation and prevention of the spread of new coronavirus (coronavirus diseases/covid-19) has been carried out by the Government of South Sumatra Province since the beginning President Jokowi announced that 2 people were hit in Jakarta. Starting from the formation of the Rapid Response Team or the Task Force on Prevention and Acceleration in Handling Covid-19 to the steps of anticipation and handling in the field. This was done as a step and quick reaction to anticipate the prevention of the entry of the coronavirus into the South Sumatra region. Prevention efforts include tightening the entrance to South Sumatra both air, land and water. The government revealed an integrated effort had also been made in the form of socializing the anticipation of the prevention of the coronavirus at the district, city, sub-district, village, village, and even family level. The South Sumatra government does not yet have a specific website to update information about Covid-19, information is only provided through the North Sumatra provincial health office.

West Java, according to the results of a survey of the Indonesian Research Institute (2020) related to the response of provincial governments in handling the Covid-19 outbreak, found the results that public perception in terms of assessment of the regions, West Java Province was considered the best, obtaining a
percentage of 51%. Regional head or governor of West Java, the effort to fight Covid-19 is divided into three layers or three strongholds. Specifically, prevention, tracking, and care. Do not let Covid-19 jump right through the fortress one, two to three strongholds which resulted in a definite cannot handle by the hospital. In addition to applying the concept of three layers, Ridwan Kamil also explained the five principles he adhered to in handling the Covid-19 case in West Java. First responsive, if you can hurry, don’t need to wait. Second, transparent (website) Pikobar pikobar.jabarprov.go.id is part of transparency. Third, scientifically, every day there is an expert panel, statisticians, doctors giving input to the West Java government, large-scale provincial social restrictions are one of the inputs from the experts. Fourth, collaborative, inviting youth clubs, Family Welfare Empowerment, making public kitchens and others. The fifth innovative, industry utilized, Biopharma made its PCR (polymerase chain reaction).

East Java, social distancing policy seems not to be fully implemented in East Java. Until the positive announcement of Covid-19 in Indonesia reached thousands there were still many people who underestimated the outbreak (Kominfo, 2020). Therefore, the Governor of West Java implements several matters related to the handling of Covid-19 including: The first policy is transportation. She appealed to the Regent/Mayor to provide hand washing facilities with soap and to provide a health checkpoint equipped with a thermal gun and mask for those found to have symptoms of cough, runny nose and fever. The facility must be equipped at each terminal, airport, station or port under its authority; Secondly in the term of education, she emphasized that the implementation of teaching and learning activities at junior and high school in East Java was carried out at the homes of each student by giving assignments to be assessed upon entering school. Especially for vocational high school and high school class XII who will take the national exam for vocational schools from March 16-19, 2020, high schools from March 30-April 2 2020 will continue to be carried out according to schedule with due regard to various prescribed health procedures. The education unit was also asked to postpone the implementation of student exchange activities both abroad and into the country, including study tour activities; Third in the health sector, the governor urges the Regent/Mayor to instruct the Health Service, Puskesmas (public health center to monitor people who come from affected countries/regions because they are People at Risk. Also, health workers are also asked to track patients who are positive and increase counseling on Covid-19 prevention to the community. 44 referral hospitals have been determined are also asked to immediately arrange additional facilities for handling patients with Covid-19 in the form of isolation rooms, personal protective equipment, medicines and consumables, and health workers; Fourth in the field of government, she emphasized the State Civil Apparatus in the East Java Provincial Government to improve hygiene and prepare handwashing facilities with soap. East Java itself has a website to monitor and update Covid-19, namely http://infocovid19.jatimprov.go.id.

Central Java, applying traditional methods, one of which is done by giving
direct understanding to the community in a door to door. The government intensively went around by cycling to meet the community. According to Sastroredja (2020), a mathematician from Sebelas Maret University (UNS) Surakarta, has a high level of effectiveness in implementing preventive measures. Also, to tackle the spread of the coronavirus, the government prepared three steps namely preventive, curative and promotive. Preventive action is done by inviting people to do social distancing or keep their distance. According to the government, community assistance is needed to reduce crowds and inform the government if there has ever been a positive contact with a Covid-19 patient. Traces of positive patients and people in monitoring in Central Java also continue. This is done to find the distribution map, including who is the carrier of the virus and the point where they have carried out activities. Meanwhile, the curative step taken by the government is by preparing hospitals in Central Java to deal with this virus. There are at least 58 hospitals in Central Java and more than 300 isolation rooms have been prepared to handle this problem. The promotive step is carried out by educating and socializing to the public to maintain a clean and healthy lifestyle. The government also asks people to increase their intake of vitamins, especially fruits. Central Java itself has a website for monitoring and updating Covid-19 namely https://corona.jatengprov.go.id.

In Yogyakarta, the government said that the seven steps were necessary. 7 Pitulungan is a strategy adopted by the Yogyakarta government to deal with Covid-19. Before this is done the first thing to do is mapping and projecting Covid-19 in DIY. The need for accurate mapping and availability of data to carry out government policy strategies with relevant stakeholders effectively and on target. The first step is prevention. Breaking the chain of transmission of the coronavirus. Prevention includes socialization and education so that the public understands and disciplines the Covid-19 prevention protocol. Socialization and education about Covid-19 to the public can be done with online and offline publication channels. Information and communication technology-based socialization and education, which is delivered so that the public knows Covid-19 through text, video and audio narratives, and easily access them via Android. The second step is medical treatment, by improving the health system. The government also emphasizes the support and protection of medical personnel and important medical personnel, starting from the availability of personal protective equipment for health workers, the involvement of puskesmas to monitor residents to special hospitals for handling Covid-19 patients. The third step, non-medical treatment strategies, namely measures to overcome the impact of a pandemic in the field of food, economic, social and others. Regarding policy support, through the re-allocation of DIY APBD funds it was mentioned that it was sufficient to handle Covid-19, including buying farmers' crops and then could be channeled in the form of rice assistance to groups affected by the pandemic. The fourth step is adequate budget support. DIY regional revenue budget support includes alignment with district and city regional revenue budgets and Village Funds. Other sources of funds can be
collected from the results of mutual assistance, especially from the private sector, both in the form of CSR and other assistance. The fifth step is law enforcement in encouraging community discipline in social distancing, physical distancing and healthy living. The sixth step is community discipline supported by the Government's firmness and the fulfillment of the people's needs of life. Commission A of the DIY DPRD has asked the Yogyakarta Regional Government to firmly emphasize the importance of social restrictions, so that it grows disciplined in implementing the protocol to prevent the spread of Covid-19. The seventh step of course all these steps must be accompanied by prayer, asking God.

Besides, Yogyakarta itself also has a website to update information about Covid-19 through https://corona.jogjaprov.go.id.

South Sulawesi, which has strategic steps including the first, escorting and facilitating the return of around 8,000 participants of the Ijtimah World Asia Zone in Gowa Regency as a step to prevent the spread of the coronavirus in South Sulawesi; The appointment of 9 hospitals as a referral hospital for coronavirus patients in South Sulawesi, namely RSUP dr. Wahidin Sudirohusodo, Sayang Rakyat regional general hospital, Dadi area special hospital, Tk Hospital. Il Pelamonia, Andi Makkasar regional general hospital, Sinjai regional general hospital, and Lakipadada regional general hospital; Tightening human entrance to South Sulawesi and ensuring the dissemination of coronavirus prevention; Establishment of Command Post and Media Center for South Sulawesi Covid-19 Task Force for the Acceleration of Handling which is chaired directly by the Governor of South Sulawesi; Distribution of 1 container of medical devices consisting of 200,000 masks and 2,500 complete personal protective equipment for medical personnel in charge of treating coronavirus patients; Rationalizing and refocusing the budget especially on non-priority 2020 members and allocated for handling the coronavirus and its effects; Regarding the large-scale social restriction policy, the government said that before it emerged, the South Sulawesi Provincial Government had implemented some forms of limitation to prevent coronavirus, including dismissing schools, working from home, physical distancing, and social distancing. The South Sulawesi Government also has its website to monitor and update Covid-19, namely through https://covid19.sulselprov.go.id.

West Papua, the West Papua Government made initial anticipation of the danger of the coronavirus (COVID-19). Therefore, the West Papua provincial government has held a coordination meeting to make several policies aimed at tackling the Corona case, as an effective measure to prevent its spread. Implementing physical distancing, allocating a budget for Covid-19 prevention, providing free health care. Papua itself does not have a website to update information related to Covid-19.

Cases Analysis

As mention by Weible, C.M., Nohrstedt, D., Cairney, P. et al. (2020) that policy react and contribute to the shifting of attention to policy issues and changing of government agendas the Covid-19 pandemic signifies a sudden and drastic shift in what issues policy networks pay
attention to and, therefore, changes in agendas of many government decision-making venues, such as legislatures and government. Similarly, the Covid-19 pandemic in Indonesia has had a tremendous impact on the national economy and socio-economic community. Therefore, the Government has issued a stimulus to encourage the community and the economy, through Perppu No. 1/2020 and Perpres No. 54/2020.

However, changes that occur in Covid-19 which are increasingly widespread, are needed that occur together between the Government and the Regional Government through the reallocation and refocusing of the 2020 regional budget for handling pandemics and improving Covid-19. For this reason, the Regional Government must submit a budget for the regional budget for the year 2020 following the transfer that must be stipulated in a Joint Decree of the Minister of Home Affairs and the Minister of Finance Number 119/2813/SJ and 117/KMK.07/2020 concerning the Acceleration on Adjustment of the budget regional expenditure income in 2020 within the framework of Covid-19 Handling, and the Safeguarding of the People’s Purchasing Power and National Economy (Minister of Home Affairs and Minister of Finance), and Minister of Finance Regulation Number 35/PMK.07/2020 concerning Management of Transfers to Regions and Village Funds FY 2020 In Framework for Handling the Covid-19 Pandemic and/or Facing Threats that Endanger the National Economy (PMK No.35/2020). The results approved by the regional expenditure budget are stated in the Adjustment Report for the regional budget and then must be submitted to the Ministry of Finance and the Ministry of Home Affairs.

To ensure the commitment of ministry/institution in handling Covid-19, according to the provisions of PMK No.35/PMK.07/2020 that do not meet the provisions of the 2020 regional budget expenditure report can be carried out following the provisions of the distribution of part of general allocation funds and/or the profit-sharing fund.

The following policies taken by local governments are seen from several indicators to conclude whether the policy is proper to control the Covid-19 or not, including mitigation, social distancing, large-scale social restrictions, budget reallocation and refocusing, rapid tests, and the government providing real-time information to the public (Rahma, 2020). First, mitigation carried out by local governments in preventing the entry of Covid-19 in their respective regions, almost all regions of the red zone do mitigation by restricting access through the air or land access. Only Yogyakarta, after the case in Indonesia was announced, had not yet limited access to and out of vehicles because Yogyakarta was still low for the positive case of Covid-19. In addition to social restrictions, socialization related to the prevention and handling of Covid-19 was also carried out by the government. The aim is to make the community aware and sensitive to viruses which until now have become a global problem. Preparation of the hospital is also carried out to anticipate a large number of Covid-19 patients in the area, and ensure that they get proper medical care. However, the lack of personal protective equipment for doctors is a problem in every region in Indonesia.
Second, social distancing or physical distancing even the large-scale of social distancing carried out by the local government seems to have not succeeded in stopping the spread of Covid-19 in Indonesia. More regions were affected by the Covid-19 outbreak. For example, in East Java, the implementation of social distancing is ignored by people so there are still many people roaming the streets, shops are still open and there are no restrictions on each other. Then in Yogyakarta itself, the flow of returning home more and more. The problem that occurs is because social distancing is only a mere appeal, so there is no binding law if people violate to travel or not keep a distance.

Third, budget reallocation and budget refocusing are instructions from the central government. The intended budget reallocation policy is to postpone physical allocation, postpone/reduce grant spending that has not yet been signed on the Regional Grant Agreement Manuscript, postpone the allocation to the village government and replace it in the form of a social safety net, and to rationalize the direct expenditure of the Regional Apparatus. The regional budget is focused on handling Covid-19, including providing adequate health facilities and prioritizing subsidies for people affected by the economy. Of all the local governments sampled in this discussion, they have not been able to fully re-budget and refocus, namely South Sumatra and South Sulawesi. Some of the reasons are because the budget of each region is different, depending on regional income so for those with small regional income this will be a significant problem causing a budget deficit in the next year if it is not accompanied by central transfers to the regions.

The fourth is a rapid test, according to the central government instruction rapid tests are carried out for areas that have been designated red zones by the central government. Therefore, the areas taken as samples in this paper have passed the Covid-19 rapid test, however DKI Jakarta, South Sumatera, West Java, East Java, Central Java, and Yogyakarta. This was done to quickly find out whether positive people were corona or not, which region was the most so it helped to make policies on handling Covid-19 in the region. There are two main reasons why it is important to test audiences or diagnose them individually, as well as knowing how widespread the coronavirus is. The test apparently can help health services make plans, including setting up intensive nurse units. Testing can also provide information to policymakers about the steps to maintain distance alias physical distancing. For example, if many people are known to have contracted the coronavirus, then regional quarantine or Large-Scale Social Restrictions in Jakarta need to be applied. Meanwhile, if there is no extensive testing, it means that many people must isolate themselves without reason, including health workers. The problem of rapid tests in Indonesia is the uneven distribution of rapid test equipment throughout the region.

Then, the provision of real-time information is provided on Covid-19’s website. Areas that have been declared red zones have a website to update all information related to Covid-19, only West Sumatra and Papua do not have a website. Not a bit of information about the coronavirus that is spread through
whatsapp is a hoax or hoax news. To that end, in addressing various issues about the coronavirus, the government provides websites from various regions to disseminate valid information regarding the Covid-19 outbreak.

The Role on the Community in Dealing with Covid-19

The appeal for social restrictions requires awareness of citizens to avoid crowds, such as keeping a distance from others at least one meter, not traveling to public areas (malls, cinemas, stadiums, schools, places of worship, government buildings, etc.), wearing masks, not touching and so on. Appeals to social restrictions force the public to learn from home, compulsory worship at home, and work from home. The role of the community to deal together with the covid-19 epidemic is very important in breaking the chain of virus spread. The Covid-19 pandemic that arises today is testing the nation's social capital, namely love of the nation and state, obedience to the rules (appeals), and prioritizing the public interest and the existence of the state.

A sense of high solidarity is needed between individuals and between nations. Since the beginning of this outbreak, WHO has always voiced the importance of solidarity as a compass with the world to get out of a pandemic. This is important so that all efforts remain focused on the main goal to reduce the rate of spread of the virus, ensure there is no stigma for sufferers, and maintain the health level of the population as much as possible. Public participation shoulder to shoulder addressing the impact of Covid-19. The enthusiasm to rise and face the Covid-19 epidemic together led to a variety of public initiatives. Plague Covid-19, arousing concern among the people.

Indonesia is one of the countries with a low level of public participation in the prevention of Covid-19, especially for social distancing and stay at home approaches. Several conditions make public participation low in social distancing and stay at home in some countries with a high co-19 spread, including in Indonesia. First, the culture of society tends not to support social distancing. Cultural conditions vary from one community to another. Liberal and individualist European societies tend to be stronger in implementing social distancing, compared to people in Asian countries that tend to have a high degree of cohesiveness. In an individualist and liberal Western societies, efforts to implement a social distancing approach are easier. While in societies that are similar and highly cohesive in Asia, efforts to implement social distancing tend not to be easy. If this is the case, the rapid spread of co-19 in some Western countries such as Italy, France, the United States, and others, is not caused by the level of community participation in social distancing, but rather the slowness of the governments of these countries in responding to the co-19 prevention. Whereas in Asian countries that have managed to put a halt to the spread of covid-19 through social distancing approaches, such as Japan, Taiwan, Vietnam, South Korea, and others, a disciplined work culture and friendly community conditions can become a force when followed by a country response fast.

While in Indonesia and Asian countries, the indiscipline and unity of
culture makes it difficult for people to apply social distancing. Social relations through a pattern of friendship between family and friends, making social distancing cannot be run strictly and difficult to discipline. Strict social discipline and discipline can only be applied if there is a clear and clear policy. In every region such as East Java, social distancing cannot be carried out properly because people still underestimate the Covid-19 problem.

Secondly, the low level of public literacy about covid-19, is understandable because covid-19 comes and spreads in a very fast time and becomes suddenly a complex condition when faced with. Covid-19 began to appear in Wuhan, China in December 2019, and then spread to various countries, including Indonesia. In this very fast and complex distribution situation, public education about Covid-19 is not easy to do. Actually, with the development of information technology that is very massive at this time, public education to improve their literacy about covid-19 is not too difficult to do. The problem is that all parties, including the government, are stuttering in responding to the development of Co-19 which is too fast, so that no one focuses on educating them to improve literacy in the community.

Third, lack of discipline in the implementation of government policies in handling Covid-19. Social distancing and stay at home approaches sometimes can not only be expected in the community to participate voluntarily. Therefore, more stringent government policies are needed to ensure that social distancing goes well. The absence of a ban on horizontal social mobility for the community, both within cities and between regions, makes social interaction between individuals in the community ongoing, which makes Covid-19 dissemination easy. In several countries, a radical policy in preventing Covid-19 is implemented, which is a lockdown. With the lockdown, social interaction is strictly limited so that social distancing can run well.

Fourth, the compulsion of the community to violate the social distancing approach. Since, there is no policy of limiting horizontal social mobility, and informal sector workers must continue to work to fulfill their daily needs, social interaction is still ongoing and social distancing is not easy to implement.

If we look at the policies carried out by the central government, regional governments, to the participation of the people in Indonesia in handling Covid-19, it can be concluded as shown below.
The Central Government concerning making policies to deal with Covid-19 cannot be directly felt by the community because each region in Indonesia has a diversity of ethnicities, cultures, and customs. Yogyakarta itself, for example, people believe in God and fully hand over the handling of a pandemic to the government so that Yogyakarta in suppressing positive numbers Covid-19. Also, Surabaya has a culture and habits of the people that are far different from Yogyakarta where people are more stubborn so that the social appeal of distancing becomes meaningless so that they have to use other methods that provide awareness to the public to comply with government recommendations.

As mention by Marc, et al (2013) state society is characterized by ’associations between state organizations and cultural gatherings to haggle how open authority is practiced and how it very well may be affected by individuals. They are centered around issues, for example, characterizing the shared rights and commitments of state and society, haggling how open assets ought to be apportioned and building up various methods of portrayal and responsibility' (Marc, 2013). The attention is not on specific institutional structures yet rather on the relations and social elements of state and society foundations. Therefore, the role of the local government in translating the policies of the central government must look at and consider the condition of the tribes, cultures, and habits of the people in their regions. Local government is a key to success in this pandemic. The community will have high trust if the local government can handle Covid-19 wisely and well. From the reasons above, the author proposed the concept that suitable to applied in Indonesia to manage the Covid-19:
According to the picture above, the government needs to dynamically coordinate the handling of the Covid-19 outbreak. In the current emergency, coordination with rigid regulations can no longer be applied. If all the elements have the same spirit of cooperation, then it can be done. For example, governors, regents, or mayors can submit proposals and initiatives to the minister and president regarding the control of this coronavirus outbreak. Flexible and dynamic coordination is needed in the current crisis conditions. For example, when there is a spike in both Monitoring Persons and Monitoring Patients who need quarantine is not only addressed by the health sector. However, it requires coordination with various parties as is done in Yogyakarta in collaboration with training centers, Hajj dormitories, and halls located in regencies or cities in Yogyakarta.

Also, coordination and communication are one of the important keys in accelerating the handling of Covid-19, therefore the Task Force functions as a coordinator that can involve all technical ministries which can also be supported by all stakeholders and existing non-governmental organizations. partners are very important for the community to support every step taken by the task force, because with good cooperation between the task force and the community it will be able to complete a clear transmission 19. Then, the local government accelerates the policy of synchronizing population data to then take steps to fulfill the basic rights of total citizenship to maintain the economic security and life of citizens, for example by starting to think about and implement Universal Basic Income policies, especially for vulnerable groups.

**Conclusion**

The spread of Covid-19 in Indonesia cannot be underestimated. Central and local government policies
must synergize. The Central Government has an important role in determining the right steps and policies for saving the country against the Covid-19 outbreak. However, the role of government in translating policy from the center to be the key to the success of a region can reduce the positive number of Covid-19. Some policies implemented include mitigation, social distancing, large-scale social restrictions, budget reallocation and refocusing, rapid tests, and the government providing real-time information to the public, almost all regions with red zone implement the policy. It’s just to provide updated information on the website channels of the local governments of Papua and South Sulawesi do not have it. The role of the regional government must be fully supported by the people who obey the government regulations. The community trusts the regional government more than the central government in handling this pandemic.
