Comment on nhess-2022-241
Anna Rita Scorzini

Community comment on "Trends in heat and cold wave risks for the Italian Trentino Alto-Adige region from 1980 to 2018" by Martin Morlot et al., Nat. Hazards Earth Syst. Sci. Discuss., https://doi.org/10.5194/nhess-2022-241-CC1, 2022

Dear Authors,

After reading your paper, we think that the discussion of your results could benefit from the findings shown in our work "Recent changes in temperature extremes across the northeastern region of Italy and their relationship with large-scale circulation. Climate Research, 81, 167-185" (Di Bacco and Scorzini (2020); doi: 10.3354/cr01614), in which we analyzed trends in temperature extremes over northeastern regions of Italy (including Trentino Alto-Adige) based on homogenized data from dense station networks.

Anna Rita Scorzini and Mario Di Bacco
