Figure S1 Flow chart of study participants

Figure S2 Stratified analysis for the PAD and LgTBil in various subgroups divided by 11.48 μmol/L. (A: TBil ≤11.48 μmol/L, B: TBil >11.48 μmol/L). *Each subgroup analysis adjusted for sex, age, BMI, SBP, DBP; smoking status, drinking status, diabetes mellitus, stroke, CHD, Hcy, FBG, TG, LDL-C, AST, ALT, eGFR, antihypertensive drugs, glucose-lowering drugs, lipid-lowering drugs, except for the stratifying variable.
Figure S3 Stratified analysis for the PAD and LgTBil in various subgroups divided by 11.48 μmol/L among men. (A: TBil ≤11.48 μmol/L, B: TBil >11.48 μmol/L). *Each subgroup analysis adjusted for age, BMI, SBP, DBP; smoking status, drinking status, diabetes mellitus, stroke, CHD, Hcy, FBG, TG, LDL-C, AST, ALT, eGFR, antihypertensive drugs, glucose-lowering drugs, lipid-lowering drugs, except for the stratifying variable.
