Materials and methods
Unless indicated, all commercial reagents were used as received without further purification. All reaction solvents were purified before use. Column chromatography was performed on silica gel, AR (200–300 mesh, General-Reagent). The enantiomeric excesses (ee) of the chiral β-hydroxy esters were determined with a Shimadzu/DGU-20A5 HPLC apparatus fitted with a Chiralcel OD (0.46 x 25 cm) chiral column. Hexane and isopropanol (98:2 (v/v)) was used as the mobile phase, flow rate: 1.0 mL/min, wavelength: 210 nm. Reactions were monitored by thin-layer chromatography (TLC) on HSGF254; and the compounds were detected by examination under UV light and spots were visualized by spraying with a molybdate solution [0.02 M solution of ammonium cerium(IV) sulfate dihydrate and ammonium molybdate(VI) tetrahydrate in aq. H₂SO₄]. Concentration of solutions was performed at reduced pressure at temperatures < 30 °C. NMR spectra were recorded at 297 K in CDCl₃ (unless stated otherwise) with a Bruker Avance III HD 400 MHz and Bruker Avance NEO 600 MHz. ¹H NMR spectra were referenced to tetramethylsilane. ¹³C NMR spectra were referenced to chloroform (δ 77.00 ppm). HRESIMS spectra were recorded on 6210 TOF (Agilent). ESIMS spectra were recorded on a Q-Tof micro (Waters) instrument.

The reaction mixture was stirred for 1 h at −78 °C. After complete consumption of the starting material as shown by TLC, the reaction was quenched by the addition of methanol (5 mL), concentrated in vacuo and purified by silica gel column chromatography (petroleum ether/ethyl acetate 10:1 with 0.1% TEA) to give the crude product 30 as white solid (184 mg, 82%); Compound 30 (184 mg, 0.078 mmol) was redissolved in tetrahydrofuran (20 mL) and Pd black (1.4 g) was added. The reaction mixture was stirred under H₂ (15 kg/cm²) at 38 ℃ for 24 h. The reaction was then quenched by one drop of triethylamine. The filtrate was concentrated in vacuo and the residue was purified by silica gel column chromatography (CH₂Cl₂/MeOH 5:1 with 0.1% TEA) to give compound 2 as white solid (91 mg, 88%).
