Experiment 1

Long exposure

Selected regions are represented in Figure 2f

HNF1A (67 kDa)

β-Tubulin (50 kDa)

Short exposure

HNF1A (67 kDa)

β-Tubulin (50 kDa)
Experiment 2

A gelatin electrophoresis experiment comparing control and Haster\textsuperscript{LKO} conditions. The gel shows bands for HNF1A (67 kDa) and β-Tubulin (50 kDa).

### Control

- HNF1A (67 kDa)
- β-Tubulin (50 kDa)

### Haster\textsuperscript{LKO}

- HNF1A (67 kDa)
- β-Tubulin (50 kDa)
