Table 3  Information on the five polyps with residual neoplasia at the polyp base.

| Variable                                      | Polyp 1 | Polyp 2 | Polyp 3 | Polyp 4 | Polyp 5 |
|-----------------------------------------------|---------|---------|---------|---------|---------|
| Group                                         | Cold snare | Cold snare | Cold forceps | Cold forceps | Cold forceps |
| Polyp location                                | Ascending | Ascending | Ascending | Transverse | Cecum |
| Polyp shape                                   | Sessile | Sessile | Sessile | Sessile | Sessile |
| Polyp size (mm)                               | 5       | 4       | 3       | 5       | 3       |
| Number of snare passes/bites to remove polyp  | 1       | 1       | 2       | 5       | 2       |
| Time of polypectomy removal (s)               | 41      | 122     | 59      | 115     | 40      |
| Base snared successfully with EMR technique   | Yes     | No      | No      | Yes     | Yes     |
| Time of base lift and removal (s)             | 125     | 148     | 79      | 240     | 88      |
| Number of passes/bites for base lift          | 1       | 4       | 4       | 1       | 1       |
| Histopathology of polyp                       | Adenoma | Adenoma | Adenoma | Sessile serrated | Sessile serrated |
| Histopathology of base tissue                 | Adenoma | Adenoma | Adenoma | Sessile serrated | Sessile serrated |

Abbreviation: EMR, endoscopic mucosal resection.

Victoria Gómez, Raul J. Badillo, Julia E. Crook et al. Diminutive colorectal polyp resection comparing hot and cold snare and cold biopsy forceps polypectomy. Results of a pilot randomized, single-center study. Endoscopy International Open 2; 2014: published online 19.11.2014

Table 3 contained an error. The group for polyp 3 was changed. The corrected table is inserted below.
