ABSTRACT
Social media is becoming a trending tool in recent times with user-friendly features, and it is worthy to say the whole world is at our hands. The prominent users of social networking sites are adolescents who want to experience the new online world and to feel connected to the globe around them by sitting at one place. The study provides the knowledge regarding gender and area based disparity with reference to the mode of media utilization. The sample of the adolescents consists of 240 students of age group 13-19 years from rural and urban areas of Visakhapatnam district, Andhra Pradesh. Data regarding background information of the respondents was cumulated using general information schedule. A questionnaire developed by Savita Gupta and Liyaqat Bashir (2018) was utilized to assess social media usage. From the outcomes of the study, it is evident that rural boys significantly differed than girls in social media usage, where boys surpass girls. Interestingly there is no difference was found between urban boys and girls in social media usage, it is also note that no remarkable difference was observed by rural and urban adolescents.

Keywords: Social media usage, Gender, Rural and Urban.

INTRODUCTION
Social media are e-channels that provide opportunity for mankind to socialize, to know, to explore, to find and to self-present with enormous audiences who draw value from online believes (Carr & Hayes, 2015). In other words social media was meant as media platform or online world. Online media has become a stage for every age group in their daily lives under the planet of advanced technology. It became a part of daily routines, tremendous advancement of Face book, Instagram and other digital media software’s utilized by every age groups particularly youngsters as an active element of utilizing media. Adolescents are empowered both positively and negatively by the make use of media platforms. Social media is an effective device to uphold healthy connections and to attain information. The purpose of the research is to determine social media usage of adolescents who are studying in rural as well as urban areas of Visakhapatnam district with the objectives given below.

To find the difference between boys and girls in the usage of social media.

To study the difference in social media usage among rural and urban respondents.

**MATERIALS AND METHODS**

The study on “Do Boys and Girls Differ in Social Media Usage?: A Comparative Research”. Carried out during 2019-2020. Current research was planned based on Ex-post facto research design. Rural and urban areas of Visakhapatnam district of Andhra Pradesh was purposively selected as the locale of the study. The overall sample consists of 120 early adolescents [13-16 years] and 120 late adolescents [17-19 years] with an uniform proportionate of both genders. The personal information like age, gender and class of study of the respondents was obtained through general information schedule. Social media usage questionnaire developed by Savita Gupta and Liyaqat Bashir (2018) was used to evaluate level of social networking utilization among the adolescents.

**RESULTS AND DISCUSSION**

Table 1 represents participant’s demographic data which includes age, gender and class of study. In the overall sample equal (16.66%) of adolescents belong to 13-14, 14-15 and 15-16 years in each age group whereas 25 per cent adolescents were belong to 17-18 and 18-19 years age groups equally. Boys and girls were equally taken up for the study. Data regarding to class of study, one third of adolescents (25%) were completed 12th and degree first years, while 10th and 9th class (15% and 14.58%) respectively, followed by 8th and 7th class (13.75% & 6.66% respectively).

Frequency distribution of adolescents according to social media usage is furnished in the Table 2. It is worthy to mention that less than half (42.5%) of the rural adolescents studied were in the category of average level of social media usage, however 39.16 per cent of the rural adolescents are in above average category and 10 per cent were in high level and remaining of them belong to low level of social media usage. While on the contrary, half (50%) of the urban adolescents studied rank above average level and less than half (35.16%) of urban adolescents are in high category, and 14.16 per cent of them grade in average level of social media usage. Whereas in total sample, less than half (44.58%) of the adolescents belong to above average level of social media usage, 28.33 per cent in average level, followed by the high in level (22.91%) and remaining 4 per cent of them in the lower category of social media utilization (Fig.1). A survey by Lenhart et al. (2012) found that about 95% of adolescents use internet, 81 per cent use online apps and Facebook is the most trending adopted social network. It has been evident by Neelamalar (2009) that youngsters have adored to social media at higher levels.

The table 3 depicts the gender disparity among rural participants with respect to social media usage. There was a highly and positively significant difference found between rural boys and girls. Boys are using social media more than their counterparts. The finding of Alfarwareh (2014) is in concord with the recent study which states that males were highly addicted to smart phones compared to females. It is also notable that there was no significance difference was found between urban boys and girls regarding social media usage. Similarly report obtained from Shilpa and Deshpanda (2016) has stated that despite of gender all students were highly addicted to smart phone and also Nur Gorkemil (2017) stated that no statistical interrelation found between gender and internet usage.

It was surprising to note that there was non-significant difference found between rural and urban adolescents regarding social media (Table 4). A study done by Sowndarya and Mounesh Pattar (2018) revealed that prevalence of internet addiction among students from suburban was more than two third (83.3%) and similar in (78%) rural area and much difference was not found.
Table 1: General profile of adolescents

| SL. No | General profile | Rural (n=120) | Urban (n=120) | Total (N=240) |
|--------|----------------|--------------|---------------|---------------|
|        |                | n %          | n %           | N %           |
| 1.     | Age in years   |              |               |               |
|        | 13-14          | 20 16.66     | 20 16.66      | 40 16.66      |
|        | 14-15          | 20 16.66     | 20 16.66      | 40 16.66      |
|        | 15-16          | 20 16.66     | 20 16.66      | 40 16.66      |
|        | 17-18          | 30 25.00     | 30 25.00      | 60 25.00      |
|        | 18-19          | 30 25.00     | 30 25.00      | 60 25.00      |
| 2.     | Gender         |              |               |               |
|        | Male           | 60 50        | 60 50         | 120 50        |
|        | Female         | 60 50        | 60 50         | 120 50        |
| 3.     | Class of study |              |               |               |
|        | 7th            | 4 3.33       | 12 10         | 16 6.66       |
|        | 8th            | 24 20        | 9 7.5         | 33 13.75      |
|        | 9th            | 15 12.5      | 21 17.5       | 36 15         |
|        | 10th           | 17 14.16     | 18 15         | 35 14.58      |
|        | 12th           | 30 25        | 30 25         | 60 25         |
|        | Degree 1st     | 30 25        | 30 25         | 60 25         |

Table 2: Frequency distribution of adolescents according to social media usage

| SL. No | Category of Social media usage | Scores | Rural | Urban | Total |
|--------|--------------------------------|--------|-------|-------|-------|
|        |                                |        | n %   | n %   | N %   |
| 1      | Low level usage                | 19-38  | 10    | 8.33  | -     | 4.16  |
| 2      | Average level usage            | 39-57  | 51    | 42.5  | 17    | 14.16 | 68    | 28.33 |
| 3      | Above average level usage      | 58-76  | 47    | 39.16 | 60    | 50    | 107   | 44.58 |
| 4      | High level usage               | 77-95  | 12    | 10    | 43    | 35.83 | 55    | 22.91 |
| 5      | Total                          | 120    | 100   | 120   | 100   | 240   | 100   |

Table 3: Gender based comparison on social media usage of adolescents

| Area   | Gender | Mean  | S.D  | T- test |
|--------|--------|-------|------|---------|
| Rural  | Boys   | 60.91 | 13.71| 2.64**  |
|        | Girls  | 54.31 | 13.60|         |
| Urban  | Boys   | 58.71 | 12.60| 1.62NS  |
|        | Girls  | 54.43 | 16.14|         |

Table 4: Mean difference among the social media usage of adolescents based on locality

| Locality | Mean  | S.D  | T –test |
|----------|-------|------|---------|
| Rural    | 57.61 | 14.01| 0.56NS  |
| Urban    | 56.57 | 14.50|         |
CONCLUSION
From the results of the study, when the mean score of the boys and girls were compared regarding media usage, boys were using more than the counterparts but significantly positive difference was noted in rural scenario but was not seen in urban areas. When locality is taken into consideration, there was no disparity was seen among rural and urban adolescents. From the outcomes of the study it is concluded that adolescents in rural area need to be channeled in using media in a more purposeful means. Hence there is a need for educating the youths regarding mode of utilization of e-channels and medias for the betterment of their life.
