Supplementary Fig. S1. Effects of increasing concentrations of dalteparin (DAL, 0.00 to 1.00 IU/mL) on thrombin generation in platelet-poor plasma samples from healthy individuals (n = 5) triggered with 5 pM tissue factor and 4 µM phospholipids. Data are shown as individual curves.
Supplementary Fig. S2. Effects of increasing concentrations of argatroban (ARG, 0.00 to 1.50 µg/mL) on thrombin generation in platelet-poor plasma samples from healthy individuals (n = 5) triggered with 5 pM tissue factor and 4 µM phospholipids. Data are shown as individual curves.
Supplementary Fig S3. Thrombin generation in platelet-poor plasma samples (A) without anticoagulant (0.00), (B) 0.25 IU/mL and (C) 0.75 IU/mL dalteparin samples, and (D) 0.25 µg/mL and (E) 0.50 µg/mL argatroban samples from critically ill sepsis patients with new-onset thrombocytopenia (n = 10) triggered with 5 pM tissue factor and 4 µM phospholipids. Data are shown as individual curves.
