Abstract

Background

Across various intersectional lines, including race, class and gender, domestic work is profoundly exploitative than other comparable occupations. The private household, within which domestic workers (DWs) work and function, provides for a space of complex and nuanced dynamics of power. According to the International Labour Organization there are more than 65 million DWs in the world, and Africa is the third largest employer of DWs, with more than 5.2 million DWs reported. The inception of the Domestic Workers Convention (No. 189) (C189) in 2011 sought to protect DWs from all forms of exploitation and discrimination in the workplace, the convention brought global attention to the violation of their human rights and inequalities within the domestic work sector. Although there are more than 5.2 million DWs in Africa, 39/46 countries in sub-Saharan Africa (SSA) have not ratified this convention. Due to the extremely low ratification of the C189 and scanty evidence on the power relations between DWs and their employers in SSA, this scoping review is relevant to detect the extent and characteristics of domestic work in SSA since the introduction of C189 in September 2011.

Methods

The literature that will be included in this scoping review are published peer-reviewed articles, grey literature from relevant departmental websites, humanitarian organisations and theses. Electronic searches of databases and search engines such as Google, Google Scholar, EBSCOhost, EBSCO Discovery Service, Scopus, World Bank and International Labour Organization (ILO) for literature published between September 2011-2021. Other search engines will include screening citations and references of appearing literature within the stipulated time period. All retrieved literature will be exported to an Endnote X9 library. Duplicate documents will be deleted prior to commencement of title screening. An adapted Mixed Method Appraisal Tool (MMAT), developed in a Google form, will be used by two reviewers to quality assess and describe all included studies (qualitative, mixed methods and quantitative).

Discussion

We anticipate mapping relevant literature on the power relations between domestic workers and their employers in sub-Saharan Africa. Once analysis and summary is finalised, the data will be useful to guide future research.

Background

Domestic work is one of the oldest occupations that is considered as informal and vulnerable globally and it is characterised by the intersectionality of race, class, gender, migration, ethnicity and citizenship.
Domestic workers (DWs) are individuals, male or female, who perform domestic work or duties in or for households that include cleaning, cooking and caring in or for household/s, and they may reside at the employer's household or commute regularly. Private households that are the primary workplaces for DWs constitute spaces of complex power relations and dynamics where inequalities and oppression are often produced and reproduced. The International Labour Organisation (ILO) estimates that 70.1 million DWs are employed across 176 countries globally with Africa being the third largest employer of DWs. The African continent accounts for an estimated 10 million DWs with the industry being primarily dominated by black African women from disadvantaged backgrounds. An ILO report states that informal and vulnerable employment constitutes 74% of women's employment in sub-Saharan Africa (SSA), while men make up 61% in this industry.

For decades, the recognition of and protection of DWs labour rights and protection were non-existent internationally and in SSA. However, the ILO has made significant strides for the socio-economic justice of DWs by setting international working standards. Despite this, domestic work remains a site for different forms of oppression as the work can be dehumanising and labour intensive. DWs are grossly underpaid for their long hours of work, and often without concise terms of employment and outside the scope of labour rights. These conditions position them as subjects of irregular working conditions and exploitation which are integral concerns for social justice and human rights. Hence, the introduction of the Domestic Workers Convention (No. 189) (C189) in 2011, which sought to protect DWs from all forms of exploitation and discrimination in the workplace, brought global attention to the violation of their human rights and inequalities within this sector. However, several SSA countries have not ratified this convention and evidence for detecting the extent and characteristics of domestic work in Africa is inadequate and insufficient.

Domestic workers are included in the United Nations Sustainable Development Goals (SDG’s), particularly SDG 5: Gender Equality, SDG 8: Decent work and economic growth and SDG 10: Reduced inequality. These SDGs are fundamental in informing the development of legislations, policies, guidelines and advocacy frameworks aimed at promoting human rights and equality of all citizens, including DWs. Engaging in a more nuanced analysis of power relations between DWs and their employers is a critical step toward reconstructing and redefining the positionality of DWs. Thus, a scoping review aimed at mapping and synthesising existing evidence on the power relations between DWs and their employers in SSA is relevant. It could assist in improving the knowledge base of domestic work and influence policy development and pragmatic human rights solutions on labour matters that could ameliorate tensions and inequalities in DW and employer relationships. The review will focus on literature published from September 2011 to 2021. The selected time period is motivated by the existence of C189 that was introduced in 2011. This time frame is particularly important for scoping and synthesising evidence on the power relations between DWs and their employers in SSA as there is only seven (Namibia, South Africa, Madagascar, Mauritius, Sierra Leone and Guinea) out of 46 SSA countries that have ratified this convention.

**Objective**
The review will be guided by the following objective:

a. To systematically map existing evidence on the power relations between DWs and their employers in SSA.

The results of the study could benefit policy makers, domestic workers, employers of domestic workers and relevant regulatory and umbrella bodies to dismantle any inequalities and improve domestic workers work and personal lives.

**Methods**

Domestic work in SSA is a broad topic as DWs’ experiences may differ across the various countries in SSA depending on the local laws and ratifications of international conventions and treaties. Hence, a scoping review was chosen to map evidence to answer our research question by systematically and rigorously searching, selecting, and integrating existing literature on the power relations between DWs and their employers in SSA (9). This scoping review will serve as a solid basis for a comprehensive interrogation of available literature in SSA, and will serve as a precursor to a systematic review on the phenomenon of domestic work.

The screened literature will include published qualitative, quantitative, and mixed-methods studies that will identify knowledge gaps on the power relations between DWs and their employers. We will use the five stages of Arksey and O’Malley’s six stages, in conjunction with developments made by Levac and colleagues. The five stages comprise of (i) identifying the research question, (ii) identifying relevant literature, (iii) study selection, (iv) data charting, and (v) collating, summarising and reporting the results (10, 11).

This protocol will adhere to rigorous standards and address all the critical steps required by following the PRISMA ScR (Preferred Reporting Items for Systematic Review and meta-Analysis Extension for Scoping Reviews) checklist (12–14).

The scoping review protocol has been registered on the Open Science Framework (OSF) on October 13, 2021 in the preregistration category and can be accessed using the link: https://osf.io/ujmnx.

**(i) Identifying the research question**

To ensure that the study selection addresses the research question, the *Population, Concept, Context* (PCC) criteria format from the Joanna Briggs Institutes will be used (see Table 1) (15).

**Primary question**

What evidence exists on the power relations between domestic workers and their employers in SSA?

**Secondary question**
• What factors contribute to inequalities in the relations between DWs and their employers in SSA?

Eligibility criteria

The eligibility of relevant studies that address the research question were guided by the population, Concept, Context (PCC) framework as presented in the following table:

| Population         | Domestic workers                                                                 |
|--------------------|----------------------------------------------------------------------------------|
| Refers to individuals older than 18 years, who perform domestic work or duties in or for households that include cleaning, cooking and caring in or for household/s, and reside at the employer’s household or commute regularly (2). |

| Concepts           | Power relations between domestic workers and their employers                       |
|--------------------|----------------------------------------------------------------------------------|
| Refers to unequal or unfair relationships between domestic workers (DWs) and their employers, where either DWs or/and employers feel powerless or privileged (16). |

| Context            | Sub-Saharan Africa: Includes 46 countries that are geographically located in the south of the Saharan desert in Africa and exclude eight countries, namely, Djibouti, Algeria, Egypt, Libya, Morocco, Somalia, Sudan and Tunisia (17). |

(ii) Identifying relevant studies

This scoping review will chart available, relevant literature to map the power relations between DWs and their employers in SSA, peer-reviewed articles and reliable grey literature (government gazettes, reports, global and national statistics, conventions, conference papers, theses and dissertations) between September 2011 and 2021. Electronic searches of databases will include EBSCO Discovery Service, Scopus and EBSCOhost (namely, Academic Search Ultimate, Africa-Wide Information, APA PsycBooks, APA PsycInfo, APA PsycTests, Audiobook Collection (EBSCOhost), eBook Collection (EBSCOhost), eBook Open Access (OA) Collection (EBSCOhost), ERIC, GreenFILE, Newspaper Source, Newswires, Open Dissertations, PEP Archive and Sociology Source Ultimate). Other search engines that will be used are: Google, Google Scholar including screening citations and references of appearing literature, the ILO, World Health Organisation (WHO) and World Bank within the stipulated time period. Literature identified will be exported to an Endnote X9 library and duplicated literature will be removed before title screening commences.

All included literature on the power relations between DWs and their employers in SSA will be guided by the inclusion criteria (see study selection below), our research questions and the study population of DWs 18 years and older who live and work in SSA.
The reliability and viability of this scoping review was tested through a pilot search conducted on one database by two screeners (TN, DM) using the keywords: “Domestic workers”, “power relations”, “power dynamics”, “control”, “sub-Saharan Africa” and “Africa”. The pilot search also made the use of Boolean terms ‘AND’, ‘NOT’ and ‘OR’ to separate search terms. The results thereof are presented in Table 2. The strategy to search for relevant literature will be guided by an experienced librarian. Studies without a publication date will not be included to eliminate any discrepancies in the findings, this is particularly important because the specified time period starts from when the C189 was introduced. Where the journal articles or books are inaccessible, the librarian will be contacted to explore alternatives to access literature such as interlibrary loans.

| Keywords                                                                 | Search Date       | Search Engine                                      | No. retrieved |
|--------------------------------------------------------------------------|-------------------|----------------------------------------------------|---------------|
| "power relations" or power or "power dynamics" or control                | 2021/10/29        | Academic Search Complete on EBSCOHost               | 466           |
| AND                                                                      |                   |                                                    |               |
| "domestic workers" or "household employees" or caregivers or nannies or maids |                   |                                                    |               |
| AND                                                                      |                   |                                                    |               |
| employer OR “employer employee relationship”                             |                   |                                                    |               |
| AND                                                                      |                   |                                                    |               |
| Africa OR sub saharan Africa OR African countries                         |                   |                                                    |               |
| NOT                                                                      |                   |                                                    |               |
| Middle East OR Djibouti OR Algeria OR Egypt OR Libya OR Morocco OR Somalia OR Sudan OR Tunisia |                   |                                                    |               |

(iii) Study selection

To ensure that relevant literature sufficiently addresses the research question in this scoping review, the inclusion and exclusion criterion were formulated and appear below.

Inclusion Criteria

The following criteria will ensure the included literature pertains to the scoping review's research objectives:
• Studies relating to the power relations between DWs and their employers in the 46 countries in SSA.
• Literature that includes employers who live and employ DWs in SSA.
• Literature that includes DWs who work in SSA.
• Grey literature (Government reports, policy statements, conference proceedings, theses and dissertations) from September 2011 to 2021.
• Literatures on the topic published between September 2011 to 2021. The motivation for the time period is due to the inception of the C189.

**Exclusion Criteria**

This scoping review will exclude:

• Literature that includes DWs from SSA who work outside of SSA.
• Literature that includes DWs from outside SSA who work outside of SSA.
• Literature that includes employers who live in SSA but employ DWs outside of SSA.
• Literature that includes child (under 18 years) DWs, who perform paid domestic work duties.
• Literature published prior to September 2011.
• Studies conducted outside of the 46 SSA countries.

**(iv) Charting of data**

To create a descriptive summary from the retrieved literature, a Google form will be used to develop an electronic data charting form. It will include all relevant information and populated with data extracted from each selected piece of literature that relates to the research objective. To ensure that the form remains relevant, accurate and timeous, the data charting form (Table 3) will be constantly reviewed, to ensure it answers the research question. The data charting form includes the discipline within which that literature has been published to observe and report on the extent that certain disciplines cover the phenomenon of power relations in domestic work.
Table 3
Data charting table

| Author and Year of publication | Discipline of the journal | Title | Study Aim/s | Study design | Study setting | Study population | Country of population | Experiences of unequal or unfair relationship | Relevant findings | Key conclusions of article |
|-------------------------------|---------------------------|-------|-------------|--------------|---------------|------------------|----------------------|---------------------------------------------|------------------|--------------------------|

(v) Collating, summarizing and reporting the results

Findings from retrieved literature will be analysed thematically as stipulated by Braun and Clarke's thematic framework (18). Atlas.ti 8 data analysis software will be used to identify, analyse and report themes within data (19). Literature will then be arranged according to themes that developed within the charted data during coding (20). All participating researchers (primary author and screeners) in the study will jointly formulate the themes. The objective of the study, which is to map evidence of the power relations between DWs and their employers in SSA, will guide the examination of the emerging themes. This will be in relation to the rigour and validity of the research question. Where discrepancies are apparent, a third screener will resolve discrepancies. As previously done by Mulqueeny and colleagues, the screeners and authors will have regular reflexive meetings to reach consensus which will in turn minimise biases and inconsistencies (21).

Quality appraisal

For quality assessments and descriptions of all included studies, an adapted 2018 version of Mixed Method Appraisal Tool (MMAT) will be used (22). To provide a rigorous account of the validity and reliability of reported findings, all sources of included and excluded data will follow a methodical and logical approach that ensures the evidence synchronises with the study objective, suitable methodologies and sampling. Additionally, proper and unbiased data interpretation, findings, discussion, conclusions and recommendations of all literature will be included. Littlewood, Chance-Larsen and McLean (2010) suggest that “inadequate attention to key design features including sample size, allocation and level of
“blinding” may increase inaccurate conclusions (23). Therefore, the quality of collected literature will be appraised through ratings from high average (100%) to above average (75%), average (50%) and low-quality (25%) research evidence (24).

Discussion

Subsequent to numerous socio-economic-political changes occurring in SSA, and international conventions and legislation promulgated to protect domestic workers’ rights, domestic work still remains a site for various forms of oppression (25). Historically, DWs have been described as “trapped within a tightly woven structure of constraints” (26). In contemporary times, it continues to be the typical analysis of the power trip of domestic worker employers, and it undeniably bears reality as “the space domestic workers occupy is still largely marginal” (27). However, literature and mass media often discuss the dynamism of power as one-directional, while ignoring the complexities and entanglement of the relationship. Without denying that domestic work is profoundly exploitative than other comparable occupations (28), the proposed scoping review will produce findings that comprehensively identify and describe the power relations between DWs and their employers. This is to identify knowledge gaps and highlight multiple truths leading to a more nuanced analysis of power in DW-employer relations across SSA.

Findings generated from this scoping review will be valuable to labour and humanitarian organisations, social justice and human rights organisations, community-based organisations (CBOs), non-governmental organisations (NGOs), policies, labour conventions and law, and inform awareness campaigns and civic engagement. Moreover, it could encourage diverse scholarship, since power relations between DWs and their employers implicate many inequalities and exploitation that various disciplines aim to eradicate. Additionally, domestic work is not an isolated phenomenon but of interest to various disciplines. It could drive the needed engagement and solution-focused dialogues, which can reduce inequalities as clearly pronounced in SDG 5: Gender Equality and SDG 10: Reduced inequality (8). The reviews findings could offer recommendations for future research and practices, be published in peer-reviewed journals, assist governmental reports and policy briefs, and be presented at international and national conferences as well as seminars. The findings can contribute to the existing body of knowledge for teaching and learning purposes in disciplines where informal economies and vulnerable occupations are prioritised.

Limitations

A scoping review with time restrictions could exclude valuable data on the power relations between DWs and their employers, for countries that have reported research evidence prior to the inception of C189.

Abbreviations
The authors express their gratitude to United Nations Children’s Fund (UNICEF), Future Africa project and University of Pretoria for support of this study. The authors also express gratitude to the National Research Foundation that sponsors the main author for her doctoral study. Ms. Kabelo Kgarosi, Faculty of Health librarian in the University of Pretoria and Ms. Faith Nsele, Faculty of Arts librarian in the University of Zululand are acknowledged for their assistance with searches and databases.
