Small bowel occlusion due to Anisakis infection

Maddalena Zippi, Daniela De Nitto, Giuseppe Grassi, Ingrid Febbraro

ABSTRACT

Abstract is not required for Letter to the Editor

International Journal of Case Reports and Images (IJCRI)

International Journal of Case Reports and Images (IJCRI) is an international, peer reviewed, monthly, open access, online journal, publishing high-quality, articles in all areas of basic medical sciences and clinical specialties.

Aim of IJCRI is to encourage the publication of new information by providing a platform for reporting of unique, unusual and rare cases which enhance understanding of disease process, its diagnosis, management and clinico-pathologic correlations.

IJCRI publishes Review Articles, Case Series, Case Reports, Case in Images, Clinical Images and Letters to Editor.

To the editors,

Anisakis is a parasitic disease. Commonly, humans are accidentally infected by eating raw or uncooked fish containing the parasites. The larva of Anisakis penetrates into the mucosa of the digestive tract causing the disease [1]. Generally, intestinal Anisakis is characterized by intermittent or constant abdominal pain starting 5–7 days after ingestion of the larvae [2]. In Japan, where this kind of infection is mostly registered, Anisakis is preferentially localized in the stomach (96%), while the intestine is involved in about 4% of cases [3]. On the contrary, in European countries some authors reported the preferred site of the infection is the intestine [4]. Rare complications include small bowel obstruction, intussusception, ileal stenosis, intestinal perforation and pneumoperitoneum [5].

A 42-year-old male was admitted for severe abdominal pain and vomiting. A clinical interview was performed, under which the patient reported that he ate raw fish (sushi) five days before the onset of his symptoms. The patient presented expired clinical conditions with dry skin and mucosae. The registered temperature reached 38.9°C, blood pressure was 120/70 mmHg, while the pulse rate was 120/min and the respiratory acts 18/min. Increased white blood cell count (16.43/mm$^3$; neutrophils 88.9%) and index of inflammation (CRP 6.0 mg/dL) were present. On physical exam, the abdomen was poorly negotiable with signs of peritoneal reaction. The patient underwent an abdominal radiography and an abdominal computed tomography (CT) scan, showed the presence of marked air-fluid levels. The diagnosis of small intestinal obstruction was run and the patient had to have surgery, consisting of removing the terminal ileum (Figure 1). The bowel was erythematous and markedly stenotic with enlarged lymph nodes in the adjacent mesentery. The day after the operation, Anisakis antibodies IgG and IgA were tested and both of them turned out to be positive. Based on these findings, a diagnosis of small bowel obstruction caused by Anisakis was made. A drug treatment with albendazole (800 mg daily) for 10 days was administered. The patient recovered well and was discharged seven days after the operation.

In conclusion, the symptoms of intestinal Anisakis are non-specific and the patients often are misdiagnosed. According to our opinion, this is the very first case of a small bowel obstruction due to Anisakis infection occurred in Italy.

Edorium Journals: An introduction

Edorium Journals Team

About Edorium Journals

Edorium Journals is a publisher of high-quality, open access, international scholarly journals covering subjects in basic sciences and clinical specialties and subspecialties.

Invitation for article submission

We sincerely invite you to submit your valuable research for publication to Edorium Journals.

But why should you publish with Edorium Journals?

In less than 10 words - we give you what no one does.

Vision of being the best

We have the vision of making our journals the best and the most authoritative journals in their respective specialties. We are working towards this goal every day of every week of every month of every year.

Exceptional services

We care for you, your work and your time. Our efficient, personalized and courteous services are a testimony to this.

Editorial Review

All manuscripts submitted to Edorium Journals undergo pre-processing review, first editorial review, peer review, second editorial review and finally third editorial review.

Peer Review

All manuscripts submitted to Edorium Journals undergo anonymous, double-blind, external peer review.

Early View version

Early View version of your manuscript will be published in the journal within 72 hours of final acceptance.

Manuscript status

From submission to publication of your article you will get regular updates (minimum six times) about status of your manuscripts directly in your email.

Our Commitment

Six weeks

You will get first decision on your manuscript within six weeks (42 days) of submission. If we fail to honor this by even one day, we will publish your manuscript free of charge.*

Four weeks

After we receive page proofs, your manuscript will be published in the journal within four weeks (31 days). If we fail to honor this by even one day, we will publish your manuscript free of charge and refund you the full article publication charges you paid for your manuscript.*

Favored Author program

One email is all it takes to become our favored author. You will not only get fee waivers but also get information and insights about scholarly publishing.

Institutional Membership program

Join our Institutional Memberships program and help scholars from your institute make their research accessible to all and save thousands of dollars in fees make their research accessible to all.

Our presence

We have some of the best designed publication formats. Our websites are very user friendly and enable you to do your work very easily with no hassle.

Something more...

We request you to have a look at our website to know more about us and our services.

* Terms and condition apply. Please see Edorium Journals website for more information.

We welcome you to interact with us, share with us, join us and of course publish with us.
