Patient Voice and Mission: Why Do Patients Choose Family Medicine and What Do They Value?

Jennifer Horn, MD¹, Summer V. Allen, MD¹, Kasey R. Boehmer, MPH, PhD², and Jennifer L. Pecina, MD¹

Abstract
Known gaps exist between what patients value and institutions prioritize. We sought to incorporate patients’ reasons for valuing family medicine into a new Mission and Vision statement by deploying brief surveys to a convenience sample of patients. We conducted descriptive quantitative analyses of demographics and inductive content analysis of written responses. Patients returned 92 (20%) of 450 questionnaires. Responders were 63% female, mean age of 47 years. Patients noted distinguishing features of family medicine were (1) continuity of care, (2) all-encompassing care, and (3) trusted referrals. Some patients reported not knowing there was a distinction between family medicine and other primary care.

Keywords
patient voice, patient experience, qualitative research, mission statement

Introduction
A shared mission and vision statement are important to quality care (1,2). Teams that share a common sense of purpose perform better and have greater satisfaction and meaning in their work (3–5), and incorporation of patients’ experiences into health care delivery is increasingly being recognized as critical to high-value health care (3). Known gaps exist between what patients value and what institutions prioritize (4). Past research has shown that including patients in decisions that impact their health and about how care is designed and delivered can improve patient engagement and outcomes (3,5,6). Involving patients in mission statement development has a significantly positive relationship to institutional performance as it relates to the mission (1).

Due to the transformation of our practice over 15 years, including implementing team-based care, our department desired an updated mission statement that would have meaning for both staff and patients. Our previous mission statement, noted below, did not include teamwork, continuity, or comprehensive care language. All are critical aspects of high performing primary care (7).

The Mayo Clinic Department of Family Medicine is committed to providing the highest quality health care to individuals, families, and the community, and will support its staff in the improvement of services, advancement of medicine, and scholarly activity.

Family medicine is a unique specialty that encompasses care over the entire life spectrum (newborns to seniors) as well as multiple generations of families. A core value for Family Medicine is relationship-based, patient-centered care, which includes the voice of our patients as partners in the care we provide (7–10). In keeping with these values, we sought to include patient input during the creation of this updated mission statement.

Method
The Mayo Clinic Family Medicine Department is an academic medical department that cares for 70 000 patients

Across 5 clinical sites. Scope of practice includes full-spectrum care across the life span for all clinicians. A minority of the clinicians practice maternity care. All clinicians included in this study had a primary panel of patients. Clinician participation was voluntary. This was a quality improvement project, and therefore, IRB approval was not sought. Patients were not identifiable based upon their survey responses.

We used a cross-sectional paper patient questionnaire that included 2 open-ended questions and 3 demographic questions (Figure 1). Questionnaires were collected with a convenience sampling approach. Five questionnaires each were

| Distinguishing features of family medicine            |                                                                                                                                                    |
| • Continuity of care by same clinician for whole family | “My entire family can be seen by the same doctor and all of our needs can be taken care of all at once, and the provider knows my family.” “I really wanted to see the same MD throughout pregnancy, labor, and after. I didn’t want to choose a pediatrician and I didn’t want to see a different midwife each appointment with a possibility of needing to change services any.” |
| • All-encompassing care across a variety of health care situations | “I feel like [physician name] in family medicine knows me and my health concerns so well. I can bring up any question and get a professional answer. She truly knows and keeps track of my family history.” “We like how it can meet all of our needs. They have great staff, and it’s easy to get to. We also like their perspective. They have you do what is best for your child.” |
| • Trusted referrals to specialists                     | “I like to have the “whole experience” where the doctor is aware of my overall health and all that is related to it. I feel that if things need more attention they will point me in the right direction for ongoing care.” “I’ve been coming to Family Medicine for years. Family Medicine takes care of my needs but will refer me onto specialties if needed.” |
| Best thing about receiving care in family medicine     |                                                                                                                                                    |
| • Small town clinic feel                               | “The personal care—I have never felt so comfortable with medical staff before and always feel like I’m the only patient of the day because I never feel rushed.” “[Clinic name] is handy, smaller, and easier to get to. Family medicine is like having a small town doctor who takes care of multiple issues and conditions.” |
| • Friendly staff                                       | “Easy access, personal doctors, wonderful nurses and assistants.” “[Physician name] is amazing. She is personal with me and my son. I can reach out to her, and she will respond in a timely manner.” |

Results

Ninty Family Medicine clinicians were given 450 questionnaires to distribute. Patients returned 92 (20%) questionnaires. Responders were 63% female with a mean age of 47 years. Patients noted that key distinguishing characteristics of care in Family Medicine were (1) continuity of care by the same clinician for the whole family, (2) all-encompassing care across a variety of health care situations, and (3) trusted referrals to specialists. Patients reported the best thing about receiving care in family medicine was (1) the “small town clinic feel,” including being known personally, and (2) friendly staff. Table 1 reflects example quotes from patient questionnaires for each of these themes and subthemes. Some patients reported not knowing there was a distinction between family medicine and other primary care or that their choice should include topics that patients value including continuity of care for the whole family across diverse health care needs.

Discussion

We used a cross-sectional questionnaire to pragmatically include patients’ voice in developing a new Family Medicine mission statement. Our results highlighted that our statement should include topics that patients value including continuity of care for the whole family across diverse health care needs.

Our mission: As a team, we partner with our patients on their care through all stages of life, listening, teaching, and growing with them.

Our vision: To touch our patients throughout their lives with warmth and personalized care based on the highest levels of learning, education, and expertise, partnering with the communities we serve.
and the personal team-based connection. This is reflected in the mission statement with words and phrases such as “throughout all stages of life” and “partner.” The accompanying vision statement also reflects these patient priorities in the reference to continuity and the words “warmth,” “personalized,” and “partnering.” Our results also highlight an opportunity to market family medicine as distinguishable from other primary care specialties, and the simplicity of incorporating patient voices into health care delivery design.

Strengths of this project included the ability to incorporate the voices of our patients in the work through the analysis of quotations. The relative simplicity of the design allowed rapid turnover of results to move quickly on the mission/vision statement development process. Flexible and creative processes and the involvement of patients have been associated with both institutional buy-in and improved performance (3).

**Limitations**

Limitations included minimal demographic and practice information and convenience sampling. Anonymized responses meant we were unable to compare responses by clinician type or scope of practice. Participation was voluntary for both clinician and patients. Although some clinicians embraced the project others were disinterested, which may have contributed to the relatively low response rate.

**Authors’ Note**

Presentations: NAPCRG Annual Meeting, Chicago, IL, 11/12/2019. Mayo Clinic Karolinska Institute Annual Meeting, Stockholm Sweden, 9/23/2019. This project was deemed a quality improvement project and not subject to IRB review. Surveys were collected anonymously and collected information could not be used to identify patients. Informed consent was not obtained because this project was designated as quality improvement.
