Abstract. With the establishment of the Sino Russian Trade Zone, the trade between China and Russia has gradually increased, which has also caused many frictions in the border trade between the two countries. At the same time, due to the imperfect legal system of border trade, it is difficult to get a better solution to Sino Russian trade disputes, which requires us to build a trade law decision-making service platform based on a new perspective. Through the trade law decision-making service platform, we can make up for the failure of economic and trade laws between China and Russia, which will promote the order transformation and economic and trade rights of Sino Russian trade. Through the trade between China and Russia, we can speed up the commercial cultural exchange and the development of economic ethics, which requires us to build a legal decision-making service platform based on computer information. By revitalizing Sino Russian trade relations, we can expand the important role of law in non-governmental trade, which will gradually establish a rational and self-discipline market order and accelerate the settlement of trade disputes between China and Russia. Finally, this paper constructs the legal decision-making service platform of Sino Russian border trade.

Keywords: Computer Information, Sino Russian Border Trade, Legal Decision Service Platform

1. Introduction

Economic globalization has become an important trend of world economic development. Under the background of economic integration, the economic and trade cooperation between various countries is constantly expanding and deepening, which makes the regional economy get great development. In order to comply with the trend of the times, China and Russia have actively joined in the economic integration [1]. Through the establishment of free trade zone, China and Russia have promoted the economic development of the two countries. China and Russia are both "BRICs countries", and have strong comparative advantages and complementarities in resources and industrial structure, which has laid a solid foundation for the economic and trade development of China and Russia [2].
In December 2011, Russia successfully joined the world trade organization, which opened a new chapter for the economic and trade activities of the two countries. In recent years, the economic and trade relations between China and Russia have been greatly developed. However, due to the differences in political relations and international affairs between the two countries, there have been many trade frictions in the border trade between China and Russia. At the same time, due to the imperfection of the legal system, it is difficult to solve the trade problems effectively. Therefore, the construction of Trade Law decision-making service platform has a detailed mass basis, which is also an urgent problem to be solved in Sino Russian trade [3].

2. The legal issues of Sino Russian border trade

2.1. The legal system is not perfect

The development of modern market relationship between China and Russia is not long, which leads to the lack of corresponding experience in legal system. Therefore, China and Russia should gradually stabilize economic and trade cooperation, which will provide effective guarantee for border trade. There are many problems in the Russian market, such as imperfect system, unstable political situation, frequent change of legal persons, speeding up the privatization process, etc., which have seriously affected the economic and trade relations between China and Russia. Therefore, the economic and trade frictions between China and Russia have gradually increased, which has caused serious obstacles to the development of Sino Russian trade. For example, when the trade enterprises between China and Russia are cheated and default on debts, the two countries usually intervene by administrative means, which requires improving the legal system of Sino Russian border trade. Through legislation, border trade between China and Russia can be on the track of legal system. At the same time, we need to minimize government intervention in specific economic behavior. Only by improving the legal system can Chinese and Russian businessmen carry out border trade activities according to law [4].

2.2. The customs service system is not perfect

In Russia, there are many problems in customs staff, such as low quality, low efficiency, corruption, complicated customs clearance procedures, etc., which have a great impact on the trade between the two countries. At the same time, Russian customs clearance facilities are relatively backward, which leads to the Russian customs export currency is very small. At the same time, China's exports often stay in Russian customs, which will seriously affect the interests of Chinese businessmen. Therefore, Russia should improve the customs service system, which will effectively carry out bilateral border trade [5].

2.3. Imperfect trade settlement service system

Trade between China and Russia is settled in local currency. Although this kind of settlement method is more convenient than using US dollar as the intermediate settlement currency, the lack of bank settlement means leads to the blocked settlement channel. There are few trade development banks, mainly due to the imperfect bank settlement system in Russia, which will seriously hinder the financial supervision systems of the two countries. Therefore, many illegal trade activities will occur, which will increase the risk of illegal channel settlement.

2.4. The trade dispute settlement system is not perfect
With the rapid development of trade between China and Russia, many trade disputes and trade disputes will arise, which will make it difficult to solve these contradictions. The lack of a fair, reasonable and effective intermediary agency for the settlement of disputes between the two countries makes it difficult to solve the trade disputes between the two countries. Therefore, we must establish arbitration mechanism, which can protect the legitimate interests of China and Russia. We must make the economic and trade relations between the two countries develop healthily [6].

2.5. Weak legal consciousness

Although China and Russia have strengthened the legal education of enterprises, the legal consciousness of some enterprises is still very weak. Therefore, China and Russia should make full use of various forms to strengthen publicity, which will continuously enhance the visibility and influence of the Sino Russian border trade legal decision-making service platform. According to the relevant survey data, about 33% of enterprises often choose to bear their own legal rights and interests in silence when their legitimate rights and interests are violated; about 52% of enterprises, although they realize that their legitimate rights and interests are infringed, do not seek legal assistance from the corresponding legal service platform; only About 15% of enterprises can make full use of legal weapons to safeguard their rights and interests when their legitimate rights and interests are violated. The weak legal consciousness of enterprises has seriously affected the operation of the legal decision-making service platform of Sino Russian border trade. In the later stage, China and Russia can focus on legal services, which can provide legal services for Sino Russian border trade enterprises. At present, in the process of operation, China Russia border trade legal decision-making service platform is affected by many factors, which will face greater difficulties.

3. Construction of legal decision service platform for Sino Russian border trade

The components of the Sino Russian border trade legal decision-making service platform include four parts, namely, the basic layer, the research and development layer, the service layer and the management layer. The specific relationship is shown in Figure 1.
There are still many problems in the operation mode of Sino Russian border trade legal decision-making service platform. At present, the Sino Russian border trade law is still in the exploration stage, which will lead to problems in the operation mode of the platform. In the process of construction, the legal decision-making service platform of border trade between China and Russia lacks corresponding theoretical guidance and service standards, which will lead to the lack of unified requirements for the procedures and conditions of its establishment and to set unified standards. In this case, it leads to the low quality of legal services provided by the Sino Russian border trade legal decision-making service platform, and even makes enterprises have a wrong understanding. Therefore, the perfect legal system of Sino Russian trade is the basis of trade legal decision-making service platform.

4. The improvement of Sino Russian border trade legal decision service platform operation mode

4.1. Strengthen the publicity of trade law decision service platform

After the construction of Sino Russian border trade legal decision-making service platform, the audience is small, and the popularity and influence are small. We must adopt a variety of forms, which can strengthen the publicity work of the legal decision-making service platform of Sino Russian border trade. By raising awareness, we can expand its influence. Therefore, we must make full use of modern information technology, which requires the help of wechat public account, microblog and other social platforms to push legal knowledge and legal cases regularly. In this way, we can enhance the legal awareness of enterprises, which will expand the influence of legal service platform.

4.2. Actively cooperate with other organizations in society
China Russia border trade legal decision-making service platform will be affected by many factors in the process of development, which will cause its less popularity. Therefore, the quality of legal services provided by the service platform is limited, which requires China and Russia to actively cooperate with social organizations. For enterprises, due to the limited level of professional knowledge, this leads to a variety of problems in the legal decision-making service platform of Sino Russian border trade. Therefore, we continue to improve the legal service quality of the Sino Russian border trade legal decision-making service platform.

4.3. Seek effective help from the local government

The construction of Sino Russian border trade legal decision-making service platform is an important part of the legal service system, which requires us to constantly improve the quality of its legal service. By improving the operation mode, we can improve the legal issues of border trade between China and Russia, which needs to seek help from the local government. With the help of funds and policies, we can promote the smooth operation of the legal service platform, which will reduce the burden of legal aid for the government.

5. Conclusion

Under the background of comprehensively implementing the rule of law, the construction of legal decision-making service platform is an important part of the legal service system of Sino Russian border trade, which has become the focus of social attention. In the process of building the legal service platform, both China and Russia will be affected by many factors, which will affect its operation mode and even the quality of legal service of the platform. Therefore, China and Russia must take positive and effective measures. By promoting the operation of Sino Russian border trade legal decision-making service platform, the two countries will continue to improve the quality of legal services, which will improve the legal service system of Sino Russian border trade.
