**Supplemental Data Table S4.** Total reads and positive specimens in the internal transcribed spacer (ITS) gene taxonomy

| Taxon*         | Total reads | N of positive specimens |
|----------------|-------------|-------------------------|
| Candida        | 7,214       | 13                      |
| Nakaseomyces   | 104         | 4                       |
| Phialemonium   | 76          | 21                      |
| Epicoccum      | 46          | 1                       |
| Malassezia     | 34          | 18                      |
| Phoma          | 33          | 1                       |
| Saccharomyces  | 25          | 2                       |
| Alternaria     | 15          | 1                       |
| Trichomeriaceae| 11          | 2                       |
| Ascomycota     | 1           | 1                       |
| Cryptococcus   | 8           | 2                       |
| Cladosporium   | 5           | 2                       |
| Fusicolla      | 4           | 1                       |
| Aspergillus    | 3           | 1                       |
| Stereum        | 3           | 1                       |
| Lophiostoma    | 3           | 1                       |
| Fusarium       | 2           | 1                       |
| Kazachstania   | 2           | 1                       |
| Phylodistomum  | 2           | 1                       |
| Thanatephorus  | 2           | 1                       |
