The Turkish Journal of Ophthalmology (TJO) is the only scientific periodical publication of the Turkish Ophthalmological Association and has been published since January 1929. In its early years, the journal was published in Turkish and French. Although there were temporary interruptions in the publication of the journal due to various challenges, the Turkish Journal of Ophthalmology has been published continually from 1971 to the present.

The Turkish Journal of Ophthalmology is currently published in Turkish and English languages. TJO is an independent international periodical journal based on single-blind peer-review principle. TJO is regularly published six times a year and special issues are occasionally released. The aim of TJO is to publish original research papers of the highest scientific and clinical value at an international level. Furthermore, review articles, case reports, editorial comments, letters to the editor, educational contributions and congress/meeting announcements are released.

The target audience includes specialists and physicians in training in ophthalmology in all relevant disciplines.

The editorial policies are based on the “Recommendaitions for the Conduct, Reporting, Editing, and Publication of Scholarly Work in Medical Journals (ICMJE Recommendations)” by the International Committee of Medical Journal Editors (2013, archived at http://www.icmje.org/) rules.

The Turkish Journal of Ophthalmology is indexed in the PubMed/MEDLINE, PubMed Central (PMC), Web of Science-Emerging Sources Citation Index (ESCI), Scopus, TUBITAK/ULAKBIM, Directory of Open Access Journals (DOAJ), EBSCO Database, CINAHL, Proquest, Embase, British Library, Index Copernicus, J-Gate, ROOT INDEXING, IdealOnline, Turk Medline, Hinari, GOALI, ARDI, OARE and Turkish Citation Index.

Open Access Policy

This journal provides immediate open access to its content on the principle that making research freely available to the public supports a greater global exchange of knowledge.

Open Access Policy is based on the rules of the Budapest Open Access Initiative (BOAI) http://www.budapestopenaccessinitiative.org/. By “open access” to peer-reviewed research literature, we mean its free availability on the public internet, permitting any users to read, download, copy, distribute, print, search, or link to the full texts of these articles, crawl them for indexing, pass them as data to software, or use them for any other lawful purpose, without financial, legal, or technical barriers other than those inseparable from gaining access to the internet itself. The only constraint on reproduction and distribution, and the only role for copyright in this domain, should be to give authors control over the integrity of their work and the right to be properly acknowledged and cited.

Subscription Information

TJO is sent free of charge to subscribers. Address changes should be immediately reported to the affiliates and to the managing editor. Subscribers who do not receive the journal in the relevant time period should contact the managing editor. All published volumes in full text can be reached free of charge through the website www.oftalmoloji.org. Requests for subscription should be addressed to the Turkish Ophthalmological Association.

Manuscripts can only be submitted electronically through the Journal Agent website (http://journalagent.com/tjo/) after creating an account. This system allows online submission and review.

Instructions for Authors

Instructions for authors are published in the journal and on the website www.oftalmoloji.org

Material Disclaimer

The author(s) is (are) responsible for the articles published in the Turkish Journal of Ophthalmology.

The editor, editorial board and publisher do not accept any responsibility for the articles.

The journal is printed on acid-free paper.

This work is licensed under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 International License.
INSTRUCTIONS TO AUTHORS

The Turkish Journal of Ophthalmology is an official peer-reviewed publication of the Turkish Ophthalmological Association. Accepted manuscripts are printed in Turkish and published online in both Turkish and English languages. Manuscripts written in Turkish should be in accordance with the Turkish Dictionary and Writing Guide (‘Türkçe Sözlüğü ve Yazım Kilavuzu’) of the Turkish Language Association. Turkish forms of ophthalmology-related terms should be checked in the TÖDNET Dictionary (‘TÖDNET Sözlüğü’).

References should be numbered consecutively in the order in which they are first mentioned and used accordingly. The Turkish Journal of Ophthalmology does not change any article submission or processing charges. A manuscript will be considered only with the understanding that it is an original contribution that has not been published elsewhere.

Reviewed and accepted manuscripts are translated either from Turkish to English or from English to Turkish by the Journal through a professional translation service. Prior to publishing, the translations are submitted to the authors for approval or correction requests, to be returned within 7 days. If no response is received from the corresponding author within this period, the translation is checked and approved by the editorial board.

The abbreviations of the Turkish Journal of Ophthalmology is TJO; however, it should be denoted as Turk J Ophthalmol when referenced. In the international index and database, the name of the journal has been registered as Turkish Journal of Ophthalmology and abbreviated as Turk J Ophthalmol.

The scientific and ethical liability of the manuscripts belongs to the authors and the copyright of the manuscripts belongs to the Turkish Journal of Ophthalmology. Authors are responsible for the contents of the manuscript and accuracy of the references. All manuscripts submitted for publication must be accompanied by the Copyright Transfer Form. Once this form, signed by all the authors, has been submitted, it is understood that neither the manuscript nor the data it contains have been submitted elsewhere or previously published and authors declare the statement of scientific contributions and responsibilities of all authors.

All manuscripts submitted to the Turkish Journal of Ophthalmology are screened for plagiarism using the ‘iThenticate’ software. Results indicating plagiarism may result in manuscripts being returned or rejected. Experimental, clinical and drug studies requiring approval by an ethics committee must be submitted to the Turkish Journal of Ophthalmology with an ethics committee approval report confirming that the study was conducted in accordance with international agreements and the Declaration of Helsinki (revised 2013) (https://www.wma.net/policies-post/wma-declaration-of-helsinki-ethical-principles-for-medical-research-involving-human-subjects/).

In case of any suspicion or claim regarding scientific shortcomings or ethical infringement, the Journal reserves the right to submit the manuscript to the supporting institutions or other authorities for investigation. The Journal accepts the responsibility of initiating action but does not undertake any responsibility for an actual investigation or any power of decision. The Editorial Policies and General Guidelines for manuscript preparation specified below are based on “Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly Work in Medical Journals (ICMJE Recommendations)” by the International Committee of Medical Journal Editors (2013, archived at http://www.icmje.org/).

Preparation of research articles, systematic reviews and meta-analyses must comply with study design guidelines: CONSORT statement for randomized controlled trials (Moher D, Schulz CF, Altman D, for the CONSORT Group. The CONSORT statement revised recommendations for improving the quality of reports of parallel group randomized trials. JAMA 2001; 285: 1987-91) (http://www.consort-statement.org/); PRISMA statement of preferred reporting items for systematic reviews and meta-analyses (Moher D, Liberati A, Tetzlaif J, Altman DG, The PRISMA Group. Preferred Reporting Items for Systematic Reviews and Meta-Analyses: The PRISMA Statement. PLoS Med 2009; 6(7): e1000097. (http://www.prisma-statement.org/); STARD checklist for the reporting of studies of diagnostic accuracy (Bossuyt PM, Reitsma JB, Bruns DE, Gatsonis CA, Glasziou PP, Irwig LM, et al., for the STARD Group. Towards complete and accurate reporting of studies of diagnostic accuracy: the STARD initiative. Ann Intern Med 2003;138:40-4.) (http://www.stard-statement.org/); STROBE statement, a checklist of items that should be included in reports of observational studies (http://www.strobe-statement.org/); MOOSE guidelines for meta-analysis and systemic reviews of observational studies (Stroup DF, Berlin JA, Morton SC, et al. Meta-analysis of observational studies in epidemiology: a proposal for reporting Meta-analysis of observational Studies in Epidemiology (MOOSE) group. JAMA 2000; 283: 2008-12).

GENERAL GUIDELINES

Manuscripts can only be submitted electronically through the Journal Agent website (http://journalagent.com/tjo/) after creating an account. This system allows online submission and review. The manuscripts are archived according to ICMJE, Index Medicus (Medline/PubMed) and Ulakbim-Turkish Medicine Index Rules.

Format: Manuscripts should be prepared using Microsoft Word, size A4 with 2.5 cm margins on all sides, 12 pt Arial font and 1.5 line spacing.

Abbreviations: Abbreviations should be defined at first mention and used consistently thereafter. Internationally accepted abbreviations should be used; refer to scientific writing guides as necessary.

Cover letter: The cover letter should include statements about manuscript type, single-journal submission affirmation, conflict of interest statement, sources of outside funding, equipment (if applicable), approval of language for articles in English and approval of statistical analysis for original research articles.

REFERENCES

Authors are solely responsible for the accuracy of all references.

In-text citations: References should be indicated as a superscript immediately after the period/full stop of the relevant sentence. If the author(s) of a reference is/are indicated at the beginning of the sentence, this reference should be written as a superscript immediately after the author’s name. If relevant research has been conducted in Turkey or by Turkish investigators, these studies should be given priority while citing the literature.

Presentations and congresses, unpublished manuscripts, theses, Internet addresses, and personal interviews or experiences should not be included as references. If such references are used, they should be indicated in parentheses at the end of the relevant sentence in the text, without reference number and written in full, in order to clarify their nature.

References section: References should be numbered consecutively in the order in which they are first mentioned in the text. All authors should be listed regardless of number.
The titles of journals should be abbreviated according to the style used in the Index Medicus.

Reference Format
Journal: Last name(s) of the author(s) and initials, article title, volume, edition, date of publication, inclusive page numbers. Example: Collin JR, Rathbun JE. Involutorial entropion: a review with evaluation of a procedure. Arch Ophthalmol. 1978;96:1058-1064.
Book: Last name(s) of the author(s) and initials, chapter title, book editors, book title, edition, place of publication, date of publication and inclusive page numbers of the extract cited. Example: Haggag E. The Acquired Diseases (1st ed). Philadelphia: Mosby Harcourt; 1999:11-1-8.
Book Chapter: Last name(s) of the author(s) and initials, chapter title, book, book title, edition, place of publication, date of publication and inclusive page numbers of the cited piece. Example: O'Brien TP, Green WR. Periocular Infections. In: Feigin RD, Cherry JD, eds. Textbook of Pediatric Infectious Diseases (4th ed). Philadelphia: W.B. Saunders Company;1998:1273-1278.

In the text, the abbreviations of the Turkish journals should be used as much as possible; if any abbreviations are used, they must be defined in the text. For original articles, the structured abstract should include the following sub-headings:

Objectives: The aim of the study should be clearly stated.
Materials and Methods: The study and standard criteria used should be defined; it should also be indicated whether the study is randomized or not, whether it is retrospective or prospective, and the statistical methods applied should be indicated, if applicable.
Results: The detailed results of the study should be given and the statistical significance level should be indicated.
Conclusion: Should summarize the results of the study, the clinical applicability of the results should be defined, and the favorable and unfavorable aspects should be declared.
Keywords: A list of minimum 3, but no more than 5 key words must follow the abstract. Key words in English should be consistent with "Medical Subject Headings (MeSH)" (www.nlm.nih.gov/mesh/MBrowser.html). Turkish key words should be direct translations of the terms in MeSH.

Review Articles
Review articles can address any aspect of clinical or laboratory ophthalmology. Review articles must provide critical analyses of contemporary evidence and provide directions of current or future research. Most review articles are commissioned, but other review submissions are also welcome. Before sending a review, discussion with the editor is recommended.

Letters to the Editor
Letters to the Editor should be short commentaries related to current developments in ophthalmology and their scientific and social aspects, or may be submitted to ask questions or offer further contributions in response to work that has been published in the Journal. Letters do not include a title or an abstract; they should not exceed 1,000 words and can have up to 5 references.

CORRESPONDENCE
All correspondence should be directed to the TJO editorial board:

2020 Issue 4 at a Glance:

This issue of our journal includes 6 original studies, a review, and 4 case reports on various topics.

In their study entitled “Five-Year Long-Term Results of Standard Collagen Cross-Linking Therapy in Patients with Keratoconus”, Taşçı et al. evaluated 37 eyes with keratoconus that underwent corneal collagen cross-linking (CCL) treatment and were followed up for at least 5 years and observed increased corrected and uncorrected visual acuity at 1 and 5 years, decreased astigmatism values, reductions in steep and apex keratometry values, and significant improvements in higher-order and spherical aberrations at 5 years. As a result, the authors emphasized that in the long term, CCL therapy largely halted the disease, led to reduction of symptoms, and should be used as first-line treatment, especially in patients with progression (see pages 200-205).

Microbial keratitis occurs after penetrating keratoplasty at a frequency of 1.8-12.1% and can lead to graft failure and vision loss. Risk factors include the presence of loose sutures, retained sutures, and topical steroid use. In a study by Özalp et al. entitled “Distribution of Microbial Keratitis After Penetrating Keratoplasty According to Early and Late Postoperative Periods”, the records of 36 patients were retrospectively examined and it was determined that 55.5% of the keratitis cases were bacterial, 41.7% were viral, and 1 was fungal. Staphylococcus was the most common causative agent. Gram-positive bacteria were more common in cases that occurred within the first postoperative year, whereas gram-negative and viral infections in the late postoperative period were attributed to prolonged topical corticosteroid use (see pages 206-210).

In their original study entitled “Evaluation of Retinal Ganglion Cell Layer Thickness in the Early Period After Femtosecond LASIK Surgery”, Özülken and İlhan reported that retinal ganglion cell thickness, peripapillary retinal nerve fiber thickness, and central macular thickness measured using spectral domain optical coherence tomography (OCT) in the right eyes of 40 patients did not differ at postoperative 1 hour and 3 weeks compared to preoperative values (see pages 211-215).

Ulhaq’s study entitled “The Association Between Genetic Polymorphisms in Estrogen Receptor Genes and the Risk of Ocular Disease: A Meta-Analysis” included 5 studies that met the study criteria and showed that of 9 single nucleotide polymorphisms in the ESR1 and ESR2 genes, the ESR2 rs1256031 gene polymorphism had a protective effect against ocular disease (odds ratio: 0.55, 95% confidence interval: 0.41-0.74, p<0.001) (see pages 216-220).

Graves’ disease is characterized by hyperthyroidism, diffuse goiter, opthalmopathy, and occasionally dermopathy. In a study entitled “Evaluation of the Effect of Proptosis on Choroidal Thickness in Graves’ Ophthalmopathy”, Yildirim et al. compared choroidal thicknesses measured at the fovea and 6 points at 500-μm intervals from the fovea using Cirrus HD-OCT in 50 patients with proptosis (n=25) and without proptosis (n=25) and 25 healthy individuals and found no significant differences between the groups. Although choroidal thicknesses were found to be significantly lower in patients with active disease compared to patients with inactive disease and healthy controls, a relationship could not be demonstrated in multiple linear regression analysis (see pages 221-227).

Optical coherence tomography angiography (OCTA) is a non-invasive, fluorescein-free imaging device that enables rapid measurement and three-dimensional evaluation of the microvascular structures of the retina and choroid. İçel et al. conducted a study entitled “Evaluation of the Optic Disc and Macula in Healthy Children Using Optical Coherence Tomography Angiography” in which they obtained OCT and OCTA measurements from 146 healthy children between the ages of 6 and 16 years with the aim of creating a normative database. No relationship could be demonstrated between OCTA parameters, spherical equivalent, and axial length (see pages 228-233).

In the review selected for this issue, “Update on Contact Lens Treatment of Keratoconus”, Şengör and Aydin Kurna provide readers with a detailed overview of soft and rigid gas-permeable lenses, hybrid and scleral contact lenses, and personalized lenses used in the treatment of keratoconus, fitting characteristics, and common problems and their solutions, accompanied by the literature (see pages 234-244).

Aksay et al. present a case report entitled “Intrauterine Cataract Diagnosis and Follow-up”, in which a fetus diagnosed as having congenital cataract at 21 weeks’ gestation and subsequently
