Submitted May 3, 2017; accepted August 31, 2017; published February 2019.

Objective. To determine how the standards for teaching pharmacy history were met by U.S. pharmacy schools, whether schools wanted to expand their commitment to pharmacy history, what pedagogical assistance, if any, was desired, and whether elective courses were offered.

Methods. There were 133 school deans who were asked to identify the responsible faculty for teaching pharmacy history. A 10-question online survey instrument was designed and emailed to these faculty or the dean if no faculty were identified. Follow-up emails were sent at 2-week intervals. If they were non-responsive after three attempts, then telephone solicitation was attempted.

Results. There were 100 schools (75%) that responded. Fifty-three percent were public and 47% were private; with 50% having class sizes of 100 or less, 41% with 101-250, and 9% having over 250. Eighty-six percent of respondents meet the ACPE requirement within a required course. Seventy-two percent devote only one to five hours of instruction to meet the requirement. Sixty-eight percent use no supporting literature, and among those who do, there was no common textbook. Interestingly, 21% wanted more teaching time, and 91% desired pedagogical assistance, varying from a packaged course (26%) to a syllabus with assignments and assessment banks (23%).

Conclusion. Since no time or material guidelines were established to fulfill the ACPE pharmacy history educational requirements, these results provide a starting point to judge what is adequate and/or preferred. With the development of teaching guidelines and adoptable teaching materials, the pedagogical solution to this ACPE standard may become more complete and consistent.

Keywords: history of pharmacy, 2016 ACPE accreditation standards, pharmacy history teaching guidelines, history teaching, instructional assistance
offered a course in the history of pharmacy, and 35% included some mention of the subject in a pharmacy orientation course. Buerki attributed this decline to pressures to include new courses dealing with pharmacotherapy and clinical pharmacy topics within the standard pharmacy curriculum. Higby reported that the results of an “unscientific survey” of US pharmacy schools conducted in 2010 indicated that about two-thirds of the schools inserted between 1 and 5 hours of instruction time on pharmaceutical history into a required course, typically an orientation-type course, and that a quarter of the respondents offered an elective course on the history of pharmacy.

With these past observations in mind, and the publication of the new Standards 2016, the AIHP established a Historical Studies Committee to investigate how to assist the instruction of pharmacy history and to develop any needed resources. As such, the committee decided to conduct a study concerning the current status of the teaching of pharmaceutical history in accredited U.S. colleges and schools of pharmacy. The objectives of the study were four-fold. First, to examine how the “required elements” for teaching history of pharmacy were being met by pharmacy colleges and schools. Second, to find out whether the individual colleges and schools desired to expand upon their current commitment to the teaching of pharmacy history. Third, to inquire what pedagogical assistance related to teaching the required pharmacy history might be desired or helpful to the faculty. And finally, to document if any standalone elective courses in the history of pharmacy were being offered in addition to the required history of pharmacy material.

METHODS

An online survey tool (SurveyMonkey, San Mateo, California) was used to develop a 10-question online survey on the history of pharmacy teaching (Appendix 1). The survey was conducted between June 2015 and January 2016. It consisted of four questions on the delivery of ACPE-required history of pharmacy content, one question on what instructional materials AIHP could develop would be preferred, two questions on the offering of any elective course(s) in history of pharmacy, two questions on the institutional demographics, and one comment box for comments, questions or suggestions. The study design was granted exempt status by the Western New England Institutional Review Board.

To improve the validity of the survey results, the committee sent the survey to the actual faculty responsible for teaching the required pharmacy history. Accordingly, the pharmacy deans of the then 133 accredited pharmacy schools were contacted by email and asked to identify the faculty member who had responsibility for teaching the history of pharmacy within the curriculum. Those nonresponsive to the initial email request were sent subsequent email requests every two weeks for a total of three emails. If at that point, there was still no response, the dean was added to the faculty contact list for the survey.

Upon completion of the data collection, online survey results were analyzed to determine how the ACPE Standards 2016 history of pharmacy curricular content requirements were being met. Results were analyzed to determine whether a full course or a part of a course was implemented, the number of didactic hours devoted to teaching history of pharmacy content, and more importantly, the number of didactic hours preferred for such teaching. In addition, survey results were examined to identify whether programs employed common literature or resources for teaching pharmacy history, and which, if any, were most useful, and/or preferred, since such information would be a potential benefit to faculty currently assigned to teach pharmacy history. Finally, the number of standalone elective courses in the history of pharmacy were noted as well as the elective course characteristics.

RESULTS

Of the 133 US schools of pharmacy contacted, completed surveys were received from 100 schools, yielding an overall response rate of 75.2%. Of schools responding, 53.4% were public schools and 46.6% were private schools. Class sizes for responding schools were: 50.5% with 100 or fewer graduates per year; 40.8% with 101 to 250 graduates per year; and 8.7% with more than 250 graduates per year.

Survey results on selected course methodology indicated that 85.6% of schools responding met the ACPE pharmacy history requirement by delivering history of pharmacy content within a required course. When history of pharmacy content was incorporated within a required course, some course titles referenced “health care delivery,” “orientation,” or other introductory first year (P1) courses. Interestingly, one respondent school believed that incorporating history of pharmacy content in a required course was too superficial to address the content requirement. Only 1.9% of the schools met the requirement through a seminar or similar type program. None of the schools offered a standalone required course in pharmacy history. The remainder (12%) indicated they employed a variety of options, including incorporating history of pharmacy topics into multiple required courses as a portion of those courses, or having speakers from professional organizations present topics in class meetings, or alternatively, spreading historical topics throughout the curriculum. One school indicated that most of their
students take the history of pharmacy elective course. Another school admitted its program is not currently meeting the standard. Another respondent noted that the college was in the process of introducing a new curriculum with a required history of pharmacy course.

In terms of the approximate number of didactic hours devoted to providing the ACPE-required history of pharmacy education, 72% of responding schools indicated that they only spent 1 to 5 hours in that endeavor (Figure 1). Beyond that, only 6% provided history content at a one-credit level (11 to 15 hours), 2% provided it at a two-credit level (16 to 30 hours), and 1% provided it at a three-credit level (31 to 45 hours). When queried on how many didactic hours of history of pharmacy instruction would be preferred if given the choice, 21% expressed the desire for more time to be spent on such educational efforts (Figure 1). None of the schools desired less time for delivering pharmacy history content, and those schools that expressed a desire for more time wanted to double their time commitment, and one school even desired an excess of 45 hours.

Regarding the use of literature in the delivery of history content, 62% of the schools responding reported that no textbook or similar literature was used in the provision of the ACPE-required history instruction. Schools that did use textbook or literature resources (38%) either did not specify what was used, or they listed a variety of sources. Textbooks cited more than once included: *Introduction to Healthcare Delivery: A Primer for Pharmacists* by McCarthy and Schafermeyer (5 schools);5 *Kremers and Urdang’s History of Pharmacy* by Sonnedecker (5 schools);6 *American Pharmacy (1852-2002): A Collection of Historical Essays* by Higby and Stroud (3 schools);7 various older editions of *Remington’s The Science and Practice of Pharmacy* (3 schools);8 and *Pharmacy Management: Essentials for All Practice Settings* by Desselle, Zgarrick and Alston (2 schools).9

As for pharmacy instructional materials which AIHP could develop to assist schools in providing the required history of pharmacy content (Question 5 in Appendix 1), only 9% of respondents indicated that nothing new was needed as materials currently available were reported to be sufficient. In contrast, the remaining 91% expressed an interest for developing various pedagogical pharmacy history aids, ranging from 26% preferring a complete program of video-recorded lectures, PowerPoint slides, reading materials, assignments, and assessment materials, to 23% merely wanting a sample syllabus with suggested readings and assessments (Figure 2).

In addition to asking what schools were currently doing as far as delivery of ACPE-required history of pharmacy content, the survey asked if a standalone elective course in pharmacy history was offered (Question 6 in Appendix 1). There were 96 responses to this survey question. Eighty percent of the respondents to this question indicated that they did not offer such an elective course, while only 20% (18 respondents) did offer such an elective (Figure 3). Seventy-two percent of the respondents offering an elective course reported they offered it every year, and 11% reported they offered it twice a year. Seventeen percent indicated that their history of pharmacy elective was offered only periodically. One respondent noted that the elective was offered every year as long as there was sufficient student interest. Another school offered two different electives in the history of pharmacy, one in the fall semester and the other in the spring semester.

![Figure 1. Didactic hours devoted to ACPE history of pharmacy vs preferred hours to be devoted to this teaching (n=100)](image)
As to these elective courses, there was considerable variation in the course offerings, i.e., frequency of the offerings, number of credit-hours, and class sizes, as well as the pedagogical materials employed (Figure 3). The majority (56%) of courses were two-credit courses; with the remaining courses, either one or three credit offerings. One of the elective courses fulfilled the institution’s “writing intensive” requirement. Regarding registration figures, the number of students in these elective courses ranged from 1 to 90, with an average student registration of 27. Finally, only 56% of the elective courses had a required textbook, with the most commonly cited one being Kremers and Urdang’s History of Pharmacy.6

The only other textbooks mentioned by respondents as in use, were American Pharmacy (1852-2002): A Collection of Historical Essays, and Heroes of Pharmacy: Professional Leadership in Times of Change.7,10

DISCUSSION

Although there are currently no agreed-upon metrics of time allocation, subject areas to cover, or required reference materials, the results of this survey provide a starting point from which to judge what is adequate or preferred to fulfill the ACPE-required curricular elements for history of pharmacy content. There does appear to be a desire by some of the schools for more time to be spent on pharmacy history teaching, but more importantly, there is a desire by most of the responding schools for some form of pedagogical assistance in the form of instructional materials. The development and availability of updated teaching aids and

Figure 3. Stand-Alone Electives in History of Pharmacy Teaching (n=18)
reference materials will clearly encourage and empower faculty to develop valuable approaches to the teaching of history of pharmacy that should stimulate greater student interest, understanding and enthusiasm for their chosen profession. The results of this survey also demonstrate that there is at least some modest interest among the colleges and schools of pharmacy in the development and offering of free-standing professional elective courses in the history of pharmacy.

To provide this additional support to faculty who are striving to meet the ACPE standard, and to offer pharmacy students a better historical perspective of their profession, both the AIHP’s Historical Studies Committee and the American Association of the Colleges of Pharmacy’s History of Pharmacy Special Interest Group (“History of Pharmacy SIG”) have developed multiple tools. The committee has developed “AIHP Guidelines to Meet the ACPE History of Pharmacy Education Accreditation Standard” (Appendix 2), as well as soon-to-be-released multi-varied pedagogical aids, including everything from a la carte modular programming to elective course teaching materials to a simple reference list. Likewise, the History of Pharmacy SIG has long published various elective course syllabi, presented programs for teaching pharmacy history, and developed PowerPoint programs to meet the AIHP Guidelines. It is also worth noting the 2016 publication of a new and concise textbook, A Brief History of Pharmacy, may be another useful reference source for faculty and students.11

CONCLUSION

Developing an understanding of the historical development of the profession of pharmacy is a necessary part of the process of professionalization, and should be a desired outcome, of any doctor of pharmacy curriculum. As pharmacy students seek to become the ultimate “drug experts” within the modern inter-professional health care delivery team, some understanding of the historical evolution of the profession is not simply an educational requirement, but an accreditation standard encompassing professional relevance. With the development of the “AIHP Guidelines” and the availability of useful teaching materials, the goal of the ACPE 2016 Accreditation Standards may be successfully achieved and the desire of the academy to provide elective offerings may become more complete and consistent.

Appendix 1. Survey of History of Pharmacy Education in U.S. Pharmacy Schools

1. Currently the ACPE history of pharmacy accreditation standard is met with a:
   - separate required course
   - portion of a required course
   - seminar or similar program
   - Other (please specify)

2. The approximate number of didactic hours devoted to providing ACPE-required history of pharmacy education is:
   - 1-5 hours
   - 6-10 hours
   - 11-15 hours
   - 16-30 hours
   - 31-45 hours
   - >45 hours

3. If you had your choice, how many didactic hours would you prefer to devote to providing the ACPE-required history of pharmacy education?
   - 1-5 hours
   - 6-10 hours
   - 11-15 hours
   - 16-30 hours
   - 31-45 hours
   - >45 hours

4. Is any literature or a textbook utilized in the provision of the ACPE-required history of pharmacy education?
   - No
   - Yes. Please specify

5. Which of the following history of pharmacy materials would you prefer to be developed to assist you in providing the required history of pharmacy education?
   - A complete program consisting of video-recorded lectures, PowerPoint slides, reading materials, assignments, and assessment materials.
   - A program consisting of PowerPoint slides, reading materials, assignments, and assessment materials.
   - A program consisting of suggested readings, assignments, and assessment materials.
   - A sample syllabus providing suggested readings and assignments.
   - Nothing needed, as materials currently available and used are sufficient.

6. In addition to content included in a required course, does your institution offer a standalone elective course in history of pharmacy?
   - Yes
   - No

7. Please provide the following information regarding the elective history of pharmacy course offered at your institution:
   - How frequently the elective is offered (eg, every year)
   - The number of credits for the elective course
   - Required textbook (if none, state so)
   - Number of students who typically take this elective when offered

8. What type of institution is your college or school of pharmacy?
   - Yes
   - No

9. Approximately how many students graduate from your PharmD program each year?
   - 100 or less
   - 101-250
   - more than 250

10. Thank you for participating in this survey. Your participation is greatly appreciated. If you have any comments or questions for AIHP’s Historical Studies Committee, please feel free to write them here.
Appendix 2. AIHP Guidelines on Teaching History of Pharmacy Education: Meeting “2016 Standards” of the Accreditation Council for Pharmacy Education

Developed by the Historical Studies Committee of the American Institute of the History of Pharmacy (AIHP).

Approved by the AIHP Board of Directors, February 2017

The 2016 ACPE Accreditation Standard:
From Appendix 1: Required Elements of the Didactic Doctor of Pharmacy Curriculum1

Social/Administrative/Behavioral Sciences
History of Pharmacy
Exploration of the evolution of pharmacy as a distinct profession, the transition from a focus on the drug to a focus on the patient and the drug (including pharmacist-provided patient care), and major milestones and contributors in the evolution of pharmacy.

The Goal of the AIHP Guidelines Regarding History of Pharmacy Education:
To guide and assist the pharmacy academy in the development of pharmacy history education that will meet the 2016 ACPE Accreditation Standard. It is understood that these guidelines can be met in a number of ways, from a distribution of the material throughout the curriculum to a portion of a single course or a standalone course.

Recommended History of Pharmacy Content Coverage:

A. Introduction to the Study of Pharmacy History
1. Purpose of learning the history of pharmacy
2. Prehistoric and ancient Western therapeutics
3. Non-Western traditional pharmacy and therapeutics (eg, Ayurveda, Traditional Chinese Medicine, African, Unani, Shamanism)

B. Evolution of Pharmacy Practice
1. Separation of pharmacy profession from the medical profession
   a. Concept of pharmacist arises in Medieval Islamic culture
   b. Edict of Frederick II, c. 1240
2. Apothecary shop practice in colonial America and the Early Republic
3. 1700-1865: In-shop manufacturer of ingredients and preparations
4. 1820: Publication of the first pharmacopeia of the U.S. demonstrates prescription writing and filling by meeting the need for drug standardization
5. 1820-1940: Pharmacist as compounding of prescriptions/rise of the classic American drugstore
6. 1920-1970: Development and growth of hospital pharmacy specialty
7. 1930-1965: “Count and pour” dispenser and development of the chain drug industry
8. 1965-1990: Clinical pharmacy era and diversification of the profession
9. 1990-2005: Pharmaceutical Care era
10. 2005-Present: Medication Therapy Management and provider status

C. Pharmacy Regulation via State and Federal Governance
1. State law impact on the profession and its practice:
   a. Pre-1870 attempts: primarily involve poison sales, abortifacient restrictions, and discount sales
   b. 1870-1900: The Model Pharmacy Act and enactment of state pharmacy laws
   c. 1900-present: Evolution of the pharmacy board, and pharmacy and pharmacist regulation
2. Federal law impact on the profession and its practice:
   a. 1848-present: Federal efforts concerned for safety in the drug production process and the drugs provided to the public
   b. 1914-present: Federal efforts to control addictive and abused substances
   c. 1962-present: Federal efforts to ensure the efficacy of the U.S. drug supply

D. Pharmacy Education
1. Prior to 1821: Training through apprenticeship
2. 1821: The beginnings of institutional pharmacy education
3. 1862: The Morrill Land Grants College Act stimulates the development of state universities
4. 1867-1899: State board of pharmacy examinations stimulate diverse educational endeavors
5. 1868: University of Michigan - first science-based state university program
6. 1907-1932: Development of pharmacy education at the B.S. level
7. Development of clerkship and residency training
8. 1960: Establishment of the minimum five-year B.S. degree requirement
9. 1975-2004: Establishment of the minimum Pharm.D. degree requirement
E. Growth of the Pharmaceutical Industry
1. Early seeds of the industry: American Revolution: Andrew Craigie, Apothecary General, established first large-scale pharmaceutical manufacturing in the U.S.
2. Post-American Revolutionary period: Philadelphia became the center of the fledgling pharmaceutical industry
3. Mid-19th century: Tensions between community pharmacists and industry regarding compounding
4. Early manufacturers: Farr & Kunzi (later named Powers & Weightman), Rosengarten & Sons, Merck & Company, Frederick Stearns, William Warner, Edward Squibb, and many others
5. 1800s: Emergence of patent medicines
6. Early 20th century: Emergence of research & development within the pharmaceutical industry; the beginning of pharmaceutical industry associations
7. Research developments from academic-industry collaborations
8. Mid-20th century: Rise of the generic pharmaceutical industry
9. Late 20th century/early 21st century: Globalization, biotechnology, “blockbuster” drugs, horizontal consolidation and vertical integration

F. Pharmacy Associations
1. Middle Ages: Pharmacy Guilds form in Europe, and gain governmental recognition and authority
2. 1617: Society of the Apothecaries of London established with continuing overlap of professional roles in Great Britain and colonial America
3. 1821: Formation of the Philadelphia College of Pharmacy by local pharmacists in response to a perceived threat from the University of Pennsylvania in Philadelphia.
4. 1852: American Pharmaceutical Association established as the first national association, with goals of promoting a professional code of ethics and legal standards for drug quality
5. 1898: National Association of Retail Druggists established as the first sub-specialty association of pharmacists
6. 1942: Creation of American Society of Hospital Pharmacists as specialty organization for hospital pharmacists.
7. Latter 20th Century and beyond: Creation of multiple specialty national pharmacy associations, some with local counterparts at the state level.
