Supplementary information

Table S1. Liquid chromatography gradient conditions for LC-MS analysis. FA is formic acid.

| Time (min) | 0.1% FA in Water (%) | 0.1% FA in ACN (%) |
|------------|----------------------|--------------------|
| 0.0        | 95                   | 5                  |
| 0.5        | 95                   | 5                  |
| 3.0        | 5                    | 95                 |
| 4.0        | 5                    | 95                 |
| 4.2        | 95                   | 5                  |
| 7.0        | 95                   | 5                  |

Figure S1. Aqueous solubility of ilomastat in the presence of CD and PVP.
