Supplementary Table 1: Table showing the number of genomes that were analysed in this study. The number of genomes collected in month wise manner is also shown in the table.

| Month               | Number of Genomes |
|---------------------|-------------------|
| January 2020        | 141               |
| February 2020       | 289               |
| March 2020          | 8453              |
| April 2020          | 5023              |
| May 2020            | 3250              |
| June 2020           | 3379              |
| July 2020           | 7359              |
| August 2020         | 4833              |
| September 2020      | 2225              |
| October 2020        | 1528              |
| November 2020       | 1997              |
| December 2020       | 3782              |
| January 2021        | 9633              |
| February 2021       | 859               |
| March 2021          | 6970              |
| Total               | 59541             |
