Supplementary Figure S2. Host range of bacteria *Sinorhizobium meliloti* ORT11 to phages *P_ort11, M_ort18, _M_sf1.2, and L_sf3.21*. Bacterial lawns were propagated by adding 200 µl of overnight culture to the 0.4% (wt/v) top-TY agar and pouring onto a solid TY plate. After 15 min, 10 µl of droplets of lysates were added without dilute (A), 10 times diluted (B), and 100 times diluted (C). Plates were incubated 2 days at 28°C for the presence of lysis plaques.
