ERRATUM TO: \textit{Front. Phys.} 17(1), 12504 (2022), https://doi.org/10.1007/s11467-021-1099-0.

The online version of the original article can be found at https://doi.org/10.1007/s11467-021-1099-0 and http://journal.hep.com.cn/fop/EN/10.1007/s11467-021-1099-0.

The \textit{x}-axis of Fig. 3(b) should be labelled “Observation duration” instead of “Total evolution time” as shown below.

\begin{figure}

\includegraphics[width=\textwidth]{accuracy_performance.png}
\caption{Accuracy performance depending on (a) total evolution time, and (b) observation duration between data points for the case of identification of Na in Figs. 2(a, c, e). The accuracy values are obtained by utilizing both SVM and RFC. The default total evolution time is 1 \textmu s, and the default duration is 50 ns for all our ML sample data in this paper. The results show our default experimental parameters provides above 90\% accuracy as in Figs. 2(a, c, e).}
\end{figure}
