Table S6. Shannon entropy values at each of the seven nucleotide positions in association with Hepatocellular Carcinoma (HCC) development: comparison between participants with progression to HCC and non-progressors.

| Position | Subgenotype Ba | Subgenotype Ce |
|----------|----------------|----------------|
|          | N=33           | N=30           |
|          | N=427          | N=65           |
| Nt 3031  | 0.4045         | 0.6390         |
| Nt 3150  | 0.6272         | 0.5693         |
| Nt 3211  | 0.3693         | 0.3693         |
| Nt 3213  | 0.3693         | 0.5693         |
| Nt 27    | 0.5693         | 0.5693         |
| Nt 1008  | 0.4045         | 0.4045         |
|          | 0.0596         | 0.0463         |
|          | 0.1595         | 0.1201         |
|          | 0.1046         | 0.0463         |
|          | 0.1298         | 0.1298         |

HCC: Non-HCC

HBV, hepatitis B virus; Nt, nucleotide.
