Table showing the reconstruction settings for each reconstructed PET image included in this study. Dark (light) shading indicates PSF\textsubscript{ON} (PSF\textsubscript{OFF}) reconstructions complying with all harmonisation criteria (see Figs. 3 and 4 in the manuscript). Bold font: reconstructions selected for constructing the reference images for voxel-by-voxel analysis. na: not available, OSEM: ordered subset expectation maximization, BSREM: block sequential regularized expectation maximization, RALMA: Row Action Maximum Likelihood Algorithm. * Transaxial filter with standard axial filter. † Transaxial filter, no axial filter.
