Markowitz et al, Fig S4

(A) Western blot analysis of Red1 protein levels in Wild type, red1_{ycs4S}, rec8Δ, and red1_{ycs4S} rec8Δ strains at different time points (0, 2, 3, 4, 5 hours).

(B) Quantification of Red1 protein levels (% of rec8Δ) in red1_{ycs4S} rec8Δ compared to rec8Δ. Error bars represent standard deviation.

(C) Immunofluorescence staining of DAPI (blue) and Red1 (green) in rec8Δ and red1_{ycs4S} rec8Δ strains. Arrow indicates localization of Red1 protein.
