Abundant Chitinous Structures in *Chilostomella* (Foraminifera, Rhizaria) and Their Potential Functions

Hidetaka Nomaki, Chong Chen, Kaya Oda, Masashi Tsuchiya, Akihiro Tame, Katsuyuki Uematsu, Noriyuki Isobe

**Figure S1.** A scanning electron micrograph (A), optical micrographs (B, C) and phase contrast micrographs (D, E) of *Chilostomella ovoidea* collected from bathyal Sagami Bay. The white arrow in the panel A indicates the aperture, an opening of the newest chamber in the calcite test connecting the interior to surrounding environments. Black arrows in the panels D and E indicate cytoplasm (presumably reticulopodia) with external particles attached. Each image taken using different individuals. Scale bars: 100 μm.
