Supplementary Material for

Allogeneic hematopoietic stem cell transplantation with the modified myeloablative condition regimen for children with chronic active Epstein–Barr virus infection

Yanhui Luo, Ang Wei, Bin Wang, Guanghua Zhu, Rui Zhang, Chenguang Jia, Yan Yan, Xuan Zhou, Jun Yang, Maoquan Qin, Tianyou Wang
| EBV-DNA                                      | Loads             |
|----------------------------------------------|-------------------|
| EBV-DNA in PBMCs at onset (×10^7 copies/mL)  | 1.05 (0.50, 1.88) |
| EBV-DNA in plasma at onset (×10^3 copies/mL) | 9.86 (2.35, 116.00) |
| EBV-DNA in PBMCs before HSCT (×10^6 copies/mL) | 2.51 (0.25, 7.63) |
| EBV-DNA in plasma before HSCT (copies/mL)   | <500 (<500, 1.39×10^3) |
| EBV-DNA in PBMCs at last test (copies/mL)   | <500 (<500, 1.77×10^3) |
| EBV-DNA in plasma at last test (copies/mL)  | <500              |

HSCT, hematopoietic stem cell transplantation; PBMCs, peripheral blood mononuclear cells.
