Reporting Summary

Nature Research wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Research policies, see our Editorial Policies and the Editorial Policy Checklist.

Statistics

For all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.

n/a Confirmed

☐ The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement

☐ A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly

☐ The statistical test(s) used AND whether they are one- or two-sided

☐ Only common tests should be described solely by name; describe more complex techniques in the Methods section.

☐ A description of all covariates tested

☐ A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons

☐ A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)

☐ For null hypothesis testing, the test statistic (e.g. F, t, r) with confidence intervals, effect sizes, degrees of freedom and P value noted Give P values as exact values whenever suitable.

☐ For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings

☐ For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes

☐ Estimates of effect sizes (e.g. Cohen's d, Pearson's r), indicating how they were calculated

Our web collection on statistics for biologists contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection Added as Supplemental Data in submission

Data analysis Added as pseudo code in revision submission

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Research guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A list of figures that have associated raw data
- A description of any restrictions on data availability

This study was sponsored by Pfizer. The authors declare that the data supporting the findings of this study are available in the supplementary information files for the paper.
Life sciences study design

All studies must disclose on these points even when the disclosure is negative.

- **Sample size**: Sample sizing was performed based on intra-class correlations between gait metric from the comparator device to gold standard.
- **Data exclusions**: Specific data exclusions were due to sensor data loss and explained in the manuscript.
- **Replication**: The code and dataset are provided with submission.
- **Randomization**: n/a
- **Blinding**: n/a

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

### Materials & experimental systems

- n/a
- □ Antibodies
- □ Eukaryotic cell lines
- □ Palaeontology and archaeology
- □ Animals and other organisms
- □ Human research participants
- □ Clinical data
- □ Dual use research of concern

### Methods

- n/a
- □ ChIP-seq
- □ Flow cytometry
- □ MRI-based neuroimaging

Human research participants

Policy information about studies involving human research participants

- **Population characteristics**: Healthy adults in two age groups (18-40 years, 65-85 years)
- **Recruitment**: Recruitment was performed at Pfizer Innovation Research Lab (PfIRe Lab) in Cambridge, Massachusetts
- **Ethics oversight**: The study was reviewed and approved by Advarra IRB (protocol number: Pro00029419).

Note that full information on the approval of the study protocol must also be provided in the manuscript.
