Supplementary Table S1. Yearly infection status of Clonorchis sinensis metacercariae (CsMc) in fishes from Deokcheon-gang in Sanscheong-gun, Gyeongsangnam-do, Korea

| Year and fish sp. examined | No. of fish examined | No. (%) of fish infected | No. of CsMc detected | Range | Average |
|---------------------------|----------------------|--------------------------|-----------------------|-------|---------|
| **2018**                  |                      |                          |                       |       |         |
| Acheilognathus koreensis  | 52                   | 11 (21.2)                | 1-7                   | 2.7   |
| Pungtungia herzi          | 46                   | 28 (60.9)                | 1-208                 | 23.5  |
| Squalidus gracilis majimae| 41                   | 37 (90.2)                | 1-44                  | 17.9  |
| Coreoperca herzi          | 31                   | 2 (6.5)                  | -                     | 1.0   |
| Microphysogobio koreensis| 20                   | 2 (10.0)                 | 2-3                   | 2.5   |
| Pseudogobio esocinus      | 1                    | 1 (100)                  | -                     | 9.0   |
| Subtotal                  | 191                  | 81 (42.4)                | 1-208                 | 16.9  |
| **2019**                  |                      |                          |                       |       |         |
| Squalidus gracilis majimae| 45                   | 25 (55.6)                | 3-101                 | 45.1  |
| Acheilognathus koreensis  | 40                   | 11 (27.5)                | 1-5                   | 1.8   |
| Pungtungia herzi          | 40                   | 23 (57.5)                | 1-193                 | 51.3  |
| Pseudogobio esocinus      | 8                    | 7 (87.5)                 | 2-62                  | 24.4  |
| Subtotal                  | 133                  | 66 (49.6)                | 1-193                 | 37.9  |
| **2020**                  |                      |                          |                       |       |         |
| Acheilognathus koreensis  | 55                   | 7 (12.7)                 | 1-8                   | 2.4   |
| Zacco koreanus            | 42                   | 2 (4.8)                  | 1-2                   | 1.5   |
| Pungtungia herzi          | 37                   | 28 (75.7)                | 1-179                 | 38.9  |
| Squalidus chankaensis     | 20                   | 18 (90.0)                | 2-160                 | 34.1  |
| Squalidus gracilis majimae| 15                   | 9 (60.0)                 | 5-185                 | 45.1  |
| Squalidus japonicus coreanus| 15               | 13 (86.7)                | 1-76                  | 19.2  |
| Coreoperca herzi          | 12                   | 3 (25.0)                 | 1-4                   | 2.0   |
| Microphysogobio koreensis| 8                    | 1 (12.5)                 | -                     | 3.0   |
| Pseudogobio esocinus      | 5                    | 2 (40.0)                 | -                     | 1.0   |
| Pseudorasbora parva       | 2                    | 2 (100)                  | 16-28                 | 22.0  |
| Coreoleuciscus splendidus | 1                    | 1 (100)                  | -                     | 1.0   |
| Subtotal                  | 212                  | 86 (40.6)                | 1-185                 | 28.3  |
| **Total**                 | 536                  | 233 (43.5)               | 1-208                 | 27.0  |
