Supplementary Table 1. Sensitivity, specificity, positive predictive value, negative predictive value, accuracy of overall survival at 24 months.

|        | % Sensitivity (95% CI) | % Specificity (95% CI) | % Positive Predictive Value (95% CI) | % Negative Predictive Value (95% CI) | % Accuracy (95% CI) |
|--------|------------------------|------------------------|--------------------------------------|--------------------------------------|---------------------|
| NLR (cutoff 3) | 53.6 (46.1-61.1)       | 59.8 (50.0-69.6)       | 69.8 (61.9-77.7)                     | 42.7 (34.4-51.0)                     | 55.8 (49.8-61.8)    |
| PLR (cutoff 210) | 53.6 (46.1-61.1)       | 62.9 (53.3-72.5)       | 71.4 (63.5-79.3)                     | 43.9 (35.6-52.1)                     | 57.0 (51.0-63.0)    |
| MLR (cutoff 0.34) | 63.1 (55.8-70.4)       | 53.6 (43.7-63.5)       | 70.2 (62.9-77.5)                     | 45.6 (36.5-54.7)                     | 59.6 (53.7-65.5)    |
| SII (cutoff 836) | 51.2 (43.6-58.8)       | 61.9 (52.2-71.6)       | 69.9 (61.8-78.0)                     | 42.3 (34.1-50.3)                     | 55.1 (49.1-61.1)    |
| CTC (cutoff 5) | 51.8 (44.3-59.3)       | 67.0 (57.6-76.4)       | 73.1 (65.1-81.1)                     | 44.5 (36.4-52.6)                     | 57.4 (51.4-63.4)    |
